I am sitting here with the MFJ 97 catalog in lap and trying figure out
which tuner to buy, the MFJ949E, the MFJ969, or mFJ986. I kinda lean
towards the latter, not because of the 3kw power handling, but the
differential capacitor and roller inductor (thus requiring only one
knob to crank the coil and one knob to tune with. I know its quite
a bit more money than the 949e but what the hell. What are your
recommendations (you Ant tuner buffs?)
(I need it primarily to reach fqcys up around 3353 and/or 2220 MARS
fqcys) as my big DRKE 2kw tuner 2000 just goes to 80 and cant
handle an 80 meter ant tuned to 160 meter fqcys. Thanks for
any guidance.
Joe/KH6JF

2494. 2 M amp help

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-04 00:00:00 UTC
From: bds3@juno.com
Message-ID: <584t1l$17a@quasar.dimensional.com>
Source record: 211303

Hi,
I am having a problem with a rfc 2-23 amp that i
would welcome some input on.
I am using it with a kenwood th-22at and a mfj 2 meter
hansheld SWR meter and a ringo ranger 2m antenna.
The SWR at full power between the ht and the antenna
is about 1.5. When the amp is hooked up to
the radio the swr is slightly higher but still below
2. But when I turn the amp on the reading goes off scale.
I was wondering if anyone could tell me want is going
on here and if this is a valid reading and how to correct it.

Thanks
bds3@juno.com

2495. CB antenna for 2M?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-04 00:00:00 UTC

I have a Jeep Cherokee with a CB installed. I was wondering if I could install a 2M radio and use the CB antenna.

Also, does anyone know if there are problems with the Cherokee when a 2M radio is installed?

Thanks,

Don

>
> "About" five? You don't know exactly how many?

Jeffery "The Indredible Fool" Herman, if you want an exact list then
fine.
The repeaters I either own, sponsor, or operate are:

443.575 (4) Sioux City/Portland (2)/Seattle
443.575 portable used when/where needed, including Dayton Hamvention
147.435 Portland
53.29 Portland

That actually makes 7, but I usually don't count the second Portland
UHF repeater or the portable so that makes 5.

> Why is it every few months you feel the need to tell everyone you operate
> a repeater? It really doesn't elevate you above anyone. In fact, I have

I have only mentioned it when it is appropriate. I don't have it in
my signature file like many repeater owners do, so shut up fool.

Why is it that every few months you feel the need to run your mouth &
make a fool of yourself on topics you know nothing about?

> a COR, et cetera). It's no big deal, got it?

Then *WHY* are you making a big deal of it?

Tim ...

What I used at my QTH was 2 Alliance antenna rotors, which I got
from individuals for FREE. These rotors are the ones where the pipe can
go entirely through the rotating cuff. I mounted one vertically with an
"L" shaped pipe in it, and mounted the other, mounted horizontally on the
horizontal section of the "L", with a pipe exending horizontally through
it to mount my antennae on. I calibrated the horizontal rotors scale in
degrees elevation. The whole thing was mounted on a 6' tripod I
constructed of pipe from a junk yard. Total cost for me was about $10 and
I've been using it for 14 years.

Message-ID: <5852er$2cn@csun1.csun.edu>
Source record: 211309

Just wanted to add my 2 cents.
The only two HT's I've owned were a Radio Shack HTX202 & Yaesu FT530.
The HTX202 was kind of big, and clumsy to carry around. The FT530 was a little bit smaller, had good features, and not much problems with intermod. I've sold these radios now, and I will be getting a Yaesu FT50R next week (it's being shipped with UPS right now).
I am looking forward to the 50R because it was wide band receive, Mil Std rating I guess it's tough, although I really haven't heard anyone say anything about it, and it's a small enough dualbander to put in your pocket. One thing I did hear are some complaints about the stock antenna. People have to going to other mfgrs or 3rd party antennas.
But that's another thread.
Good luck with your search.

Aloha Joe,
First, lets do some number conversion. MFJ's 3KW = about 500 watts.
On 3.795 mhz, I melted the roller inductor in about 15 minutes with 800
watts on SSB. The lower in frequency you go, the less power the tuner
seems to be capable of handling. Why, I dunno. Gary can probably explain
it. I recently gave it a try on 160. At about 300 watts, a loud zitting noise
was heard and more smoke. Internal investigation revealed that that
littly crappy piece of 'insulating' material on the roller inductor had a very
large black carbon track across it. I managed to fix that by replacing the
burned up insulator with plexiglass. I have used the tuner on 20 meters
at 1KW with no noticable smoke, but I really would have to say that it's
a great 100 watt tuner. Yes, the differential T design makes less knobs to
tune. About once a week, you can take the top off an recalabrate the turns
counter on the roller inductor by removing the rubber band that drives it
and reseting everything back to zero, then reinstall the rubber band. The
tuner was appantle designed to be installed 8 feet about the operators head,
as the numbers on the turns counter veiwed from straight on don't line up
very well with the hole in the case. The metering circuit, according to my
Kenwood meter and several others is only off by about 40 percent in the power
range, and when the Kenwood meter says the SWR is flat (and the meter in the
Icom does too) the MFJ meter reads about 1.5:1 SWR. All in all, I'd say it's a
Mighty Fine piece of Junk.

Now if you wanna buy a used one, I bet I know where you can get one.
No, it's not in perfect condition. It has scratches on the case, some of the
screws are missing, I don't have the original box, and I smoke like a house
on fire so the whole damn thing is yellow. Two of the little rubber feet are
missing, so it leans a bit to one side. Make me an offer I can't resist.

I really don't know what else to recommend, Joe. I think the only tuner I
have seen that I would consider buying is the Nye Viking, and it's a bit more
expensive than the MFJ. Since money is not object, why don't you go ahead
and buy the Nye Viking, and if you like it I'll buy one too. I have never bought
one as I would like to see one in person and we don't have a ham store here.
Ten Tec also has a 2KW tuner, you might want to look into that one.

73, Jim KH2D
P.S. Sometime when you aren't busy, you might want to drop me an email and explain this MIME stuff to me.

As a League member for many years, a few comments.

I believe that the League's biggest flaw is its deliberate de-emphasis, and downright denial, of viewpoints other than those of K1ZZ and his crew.

When reading QST, one would never know that ham radio contains a lively array of opinions, which are hotly debated. QST systematically excludes such debate from its pages, and reading it, one would think that all hams are marching happily in lockstep behind the League. Not true.

You are wrong to belittle the internet as a forum for hams to express themselves on ham issues. It wouldn't be nearly as necessary if QST didn't deny others a forum. What other forum do we have.

Most hams have no understanding, and no interest, in the League's poorly-understood field organization. This is the League's fault. By excluding dissent, it has sent a clear message that it doesn't want to hear, or to deal with, opinions other than those of K1ZZ.

By the way, when the hell does his term end? It seems like lifetime tenure. Is it?

>in fact acted on ideas that I have read here in .misc and in .policy, or
>how much time I spend listening and how much time I spend talking.

OK James, some questions:

1) A LOT of people lately, both on the net and on the air, have discussed the desireability of getting rid of the CW requirement, first thru WARC and then the FCC. Why almost no discussion of this in QST? One would never know it is a hot issue from reading "our" official journal. Even CQ has discussed this.

2) What are YOU PERSONALLY doing about the above issue? What is your position? What is K1ZZ's position? How can we feel that people like you represent us when we don't even know your positions on issues? Since QST systematically refuses to act as a forum for healthy, vital, debate, it is small wonder that many hams don't feel ARRL represents them.

3) Do you support, or not support, K1ZZ? What are his views and how do they square with yours? I read his editorials every month. They rarely deal with the issues that I hear hams talking about.

4) Example: contesting. Lots of hams think that contests fill up too much of the bands, and should be limited in some way. Other hams don't. I NEVER see this discussed in QST, although it is a frequent topic of discussion on the air. What is your position? What is K1ZZ's? Are we doing anything about this one way or the other, or do we care?

If you don't let us know your positions on things, how can we know or care what you do? My Congressman wouldn't dare skirt issues like this, but you guys do it systematically. And yet you claim, essentially, to represent us per ham radio much the same way a Congressman does governmentally.

Spread spectrum is an intriguing concept, but the proposal part has
already come and gone. The FCC granted the STA for CDMA spread
spectrum testing on the VHF/UHF/SHF bands less than a month ago (Nov.
8, 1996). Greg WD5IVD and Dewayne WA8DZP are the STA holders. There
are about two dozen stations currently under the STA but more can be
added. Dewayne is also the area coordinator in California so if you
really want to get involved with this new technology contact him.

This is a 50 mHz and up STA and obviously these stations are all
experimental. Dropping the HF code requirement in anticipation of HF
spread spectrum communications is a little bit premature at this date.

Again what technical rules need to be modified and what other outdated
barriers do you see?

>>>I would not have a problem with a "time in grade" requirement for

So the beginner gets all modes but a reduced slice of the amateur
spectrum. That sounds a lot like two current license classes, tech and
tech plus. Please remember that under the current standards a no-code
tech has more modes to use, more spectrum to use and the option to use
more power than a 5 wpm novice.

How long did it take you to prepare that wetware modem until you were
able to design the easy-to-use hardware modem, six days, weeks, months
years? How long did it take you to prepare that wetware modem until
you were able to pass that 5 wpm code test, six days, weeks, months
years? Which took longer? From when I started it took me seven years
to pass the 5 wpm test but I bitched and moaned for six and a half of
those years about the code. It took me three years to write my first
working TNC app from start to finish with no class room instruction or
outside tutoring while I was working FT in another industry. Six
months versus three years, whats your ratio?
>>>Commerical interests are NOT phasing out the use of Morse code ... the

Are you saying that 50 years ago the commercial interests started
abandoning CW while the amateur community still hasn't? If so that
means that the amateur community has not been leading the way since
before you (1950) and I (1953) were born. I guess the hobby has been
stagnant for a long, long time...

As to the abandonment of CW by the Federal government I suggest
reading WD0ANB's post to this thread.
>>So we as hobbyists must compete with commercial R&D to preserve our HF
>>allocations? And the FCC will ignore international conventions?
>
>We have to do our part ... not simply become a bunch of glorified CBers
>who beep ... and we can ...
>
So we are not glorified CBer's who beep now but if a no-code HF ticket
doesn't happen we will be? How can we compete? The 24 or so stations
currently operating under the spread spectrum STA total funding is
likely a lot less than your company's R&D budget for one year.

Now include all similar corporations in this country, total the R&D
budgets and divide by the number of licensed hams according to the
FCC. How many dollars per year does it break down to per ham? I don't
know how how many hams the FCC says are in this country but it would
not suprise me if the dollars per ham per year number is five figures
to the left of the decimal point.

Hobbyists hams do not draw a check on the first and fifteenth so our
second "job" is unpaid, our hours are added onto the ~40 hours a week
we work for a living, and we provide our own R&D funds.
>>"I have said before that it doesn't sound right that a ham should be

>
>I would submit that if you *really* can't readily envision how a
>varactor could be added to your oscillator circuit to produce an FSK
>signal, that you really should be recalled by the FCC for retesting ...
>
The key to my question is "without any modification to make it more complex." Once again I ask what mode besides CW can be used with the most basic, the most simple RF transmitter (a Pierce oscillator) to communicate with? Adding a varactor diode and control circuitry is most definitely a modification and most definitely makes that single stage transmitter more complex.

Yes I really I can envision how a varactor diode can be added for FSK (I do appreciate the asterisks around really) but I am willing to take a re-test without any qualms. I can still pass the general class theory and the 13 wpm test to retain my ticket.

If the FCC re-tested all hams who had renewed their tickets twice without upgrading what would happen to our ranks? How many long-time novices and grandfathered techs (tech plus now) could maintain their current license class? How many general, advanced and extra class hams could do the same?

A re-test of that manner would eliminate all the deceased hams still listed and probably a high percentage of the non-active ones as well. Then we would have a much better idea of the number of active hams in this country. Code or no-code, our slice of the spectrum would really come under scrutiny by the powers that be.
>>I and many others are open minded about dropping the code requirement
>>but to be convinced (speaking for myself) I need better reasons than
>>have been given thus far. "I can't do it. It's too hard. It's

>the course of my 20+ years as a ham ...
>
The programmers I speak of are about 50/50 on the code (just another

language and easier to learn than most others) but it is what they call "high-end/low-level" theory that bothers them. The OO programmers look at a circuit and don't care what occurs inside. A MMIC is just an encapsulated black-box to them, they know the arguments that have to be provided to the method call and they know what the return value should be. Anything else the call changes should be expected not a side-effect. These types could be very beneficial to our hobby but are unwilling to devote the time and effort to the nitty-gritty, be it code or theory. I think both ends are required.
>>Ham radio for many years was on the cutting edge of technology but

In many industries it is a standard practice to spread expenses into the next quarter. I am currently working under contract because my project's budget for the year has been exceeded. As of January 1 I will become an official FT employee when the budget will be able to pay my salary. I work FT now and get paid for it but the money just comes out of a different pool.

R&D goals are a whole lot different than pre-production goals. Many immediate designs are kludges because the bean counters are more concerned with right now than right. 'Got to get it out the door to be competitive, we can fix it later.' This is why undocumented features/bugs appear in so many products.

You feel that raising your code speed is not rewarding and not
productive enough? Passing the 13 wpm test will give you 2.725 mHz
more spectrum and allow you to use all available modes on HF. Isn't
this is the minimum you want with an HF no-code ticket? Yet it is more
productive and rewarding to spend how many years bitching and moaning
about the code requirement than to actually buckle down and apply
yourself to the dreaded task?

My preparation for the 13 wpm test was working a top band contest on
CW (with a control op present). In one weekend (~16 hrs on the air) I
went from a shaky 13 wpm to a solid 18 wpm.

You want/need to communicate from California to Georgia, you can do it
dead bug with the scraps from that 49 cent radio or you can design a
circuit, layout a PCB, buy the components and build it. Which is
quicker and more cost efficient? All you need to do is communicate,
which is better; slick, pretty and complex or basic? El cheapo scraps
versus high end R&D, they both accomplish the same thing thing but in
terms of time which one goes out the door faster? Which is more
cost-efficient? Remember you are under time and budget constraints.
Which does the corporate manager choose?

>carl@ais.net
>
My studying for an advanced ticket is not to isolate me from the potential no-code HFers.If that were the case I would not own any VHF/UHF gear and spend all my on-the-air time on HF.

It has been stated time and time again that a no-code HF ticket will swell our ranks. More numbers can mean more QRM and I QSY now to avoid excessive QRM. It has nothing to do with looking at lower class licensees as lesser hams in general.

On the other side of the coin some no-code proponents do want to totally eliminate CW! A case in point can be found in r.r.a.misc under the title of "CW OPS Attention!!!!" The post by David Thompson, K4JRB, is a re-post of George's (AA3JU) plea on an E-mail reflector. I quote in part.

"My local Ham Radio Club the Delaware Lehigh ARC is holding it's annual special event for Christmas time on the weekend of Dec 14 - 15 using the call sign WX3MAS.

"Well this ARRL affiliated club whose president is a No Code tech has FORBIDDEN the use of CW for this officially sanctioned event."

Reading that post really makes me very leery of the no-code proposal.

I'll take that as a sarcastic remark since if you knew anything about talk radio, or time for that matter, that's less than 15 seconds per caller on the air. I challenge you to find a station that takes that amount of callers. Complain as you will about the code requirement, pro or con, but don't insult your intelligence by saying nobody listens cause of 40 callers in less than 9 minutes.

OK,

I actually just wanted some information outof this original posting. Basically, I was looking for answers as to 1-who are these people, 2-how long has this been going on, and 3-is anything being done about it. Unfortunately I got some (not all, but some, I also got a lot of "any suggestions Pete" replies) replies saying basically "what the hell are YOU doing about it." -I- am doing nothing, but -I- wanted some information. Not sarcasm. As for my suggestions, here you go.

This is not what I had planned, but I'll reply. I know that this is going to open up a HUGE can of worms, and before you all go replying to it, just realize that I do not propose this as a "solution," but as a "possible" starting point. So calm down with the "flames," and before you all go replying to me saying "yeah but you can't say/do/accomplish that because...(insert criticism here)..." please just THINK, and don't trash someone else's solution before you come up with a solution, or at least a better way of doing it, yourself. I've only been on for 11 years, but I know that everybody out there has their own, better way to build the wheel. Don't trash the other guy's wheel, just tell me how yours is built. Enough said, here goes:

I know that the FCC has given up on us, but perhaps we can do a little more than we are doing. We have been doing "fox hunts" for decades now, so finding these people is not what I consider "hard." As for people to actually do the work, lets put it this way, a LOT of hams are retired. No insult meant, but they may have time, and they remember the "old," more orderly days. So I dont think that getting "hunters" is a terribly large problem. Next step, money. A lot of hams are paying dues to the ARRL. I'm not saying that they should spearhead the issue, but perhaps they can subsidize the "hunt." If the FCC gives up on us, and one of our "premier" representative groups does too, we are gone. People will need cars, airfare, hotels, antennas, and yes, it might cost a lot of money, but I think we have it. Then comes the BIG question, what do we do once we find them (and from listening to this crap for a few weeks now, it seems there are only 4-5 "big/main" people on the frequency, with a dozen or so random, lesser idiots. Hey, I think if we "locate & identify" the main guys, and go to the FCC saying "look, here they are, we found them, here is the evidence you need, now strip away their licenses, fine them, and confiscate their gear," (which happened to a few bootleg CBers on 27-28mhz 10 years ago near me), we could at least dent them. They may not have the resources to find the bootleggers, but if we find them, and a major representative group lobbies for action,

perhaps they can take the next step. Hurt the leaders intheir pocketbooks, and the followers will shut up soon afterwards.

What I am afraid of is that this one freq,(which splashes the hell out of me nearby, even with Collins filters, etc. etc., some of these clowns have the Drake maxxed out) is going to spread. There is a 10 meter freq near me (28.450)(in NY) that is already like this. As for what they are doing wrong. Okay, skip the profanity argument because of the whole 1st Amendment argument, try this: 1: no Id's, 2:they are broadcasting, 3: too much (ie. unnecessary) power for the "qso." 4:intentional interference with other stations. And I haven't even opened up the real "rulebook" yet. We have no "severe/critical" rules for them to break, but document the infringements on technical rules, and lobby for their enforcement, and we might start the ball rolling.

I know, nothing will be done, and I will just have to cruise by the freq with my vfo. What kills me is that a lot of hams go to 80 meters because the broadcasters show up on 40 at night. Now I have idiots wasting a nice chunk of our limited space.

I'm just a little bit pissed. You know.

There's my two cents.

snip

Worth noting that the power supplies in computers are generally rated at somewhere in the 150W to 250W mark - a bit expensive to leave on permanently!

Even leaving TVs/video recorders/HP LJ5 printers on all the time is not cheap; their 'sleep modes' apparently consume about 6W, which over a quarter of a year works out at about 13 kWh (costing about one UK pound). Leaving 150W on all the time works out at more like 300kWh, costing more like 26 UK pounds. I know electricity is often cheaper elsewhere, and your computer may not actually draw 150W from the mains, but it's still not cheap even with the monitor off.

However - one anecdotal example I have is of a Mac which was turned on and off frequently (probably about two or three times a day), and the mains switch broke. Cost of replacement power supply (the switch was on the power supply) about 70 UK pounds.

My feeling is that a sensible policy is to turn the PC on when you want to use it and leave it on until you're more or less finished using it for the day. FWIW I wouldn't have thought turning the PC on and off once a day would present a serious hazard to disk drive data integrity, but I'd also welcome others' thoughts on this.

This shouldn't have come as a surprise. It was well known that AEA
was hurting along with the rest of the ham radio industry.

Ham radio is a wonderful hobby, a chance to experiment with
communications technology, meet people from around the world,
provide public service, emergency communications, etc. I'm
still very enthusiastic about ham radio.

However, the *business* of supplying equipment to ham radio
enthusiasts has been steadily - and probably irreversibly
dying.

There are several reasons for this:

* No code tech license - Although the total number of US hams is
growing, most are now no code techs. Most tend to spend
a couple hundred $ on an HT instead of an HT *and* thousands
more on an HF transceiver, antennas, accessories, etc.

* Sun Spot Cycle - We are near the bottom.

* Computers - Most hams have computers. These are constantly being
upgraded/replaced because the technology changes so quickly.
A few people must have the latest transceiver with all the
bells and whistles but most are probably quite content with
a 10 or 15 year old HF transceiver.

* The Internet - 12 years ago Packet Radio was new, exciting, and
impressive.
Try demonstrating a 1200 bps connection to a text-only BBS
to anyone now. They'll laugh all the home where they can
access information around the world at 28.8k bps by pointing
and clicking with a mouse.

HF propagation will improve in a few years but that's the only good
news. Hams will probably continue to spend more time and money on
computers and Internet access and less on ham radio equipment.

With less revenue there will be less new product development and less advertising. With less advertising the magazines won't be able to survive. Take a look at the list of advertisers in a recent magazine and the same magazine from a few years ago.

Does anyone have any ideas on how to reverse the trend?

I know this was discussed to death on the Gateway2000 newsgroup, and I don't recall if a clear concensus was reached. The only comment I can make relates to how I handle the situation:

We have two Gateway systems, a 486DX-33 and a Pentium-100. Both run Windows 95. Due to that fact, and the number of applications that start up with Windows (Norton and other utilities) the startup time is not short, so the daily up/down cycle would be too time-consuming.

We usually don't power down the systems unless we are going away for a long weekend; i.e. Thanksgiving, or a vacation. They have run 7/24 for the last couple of years, with no subsystem failures.

As far as the power consumption issue: the 486 has only a 150-watt P/S as I recall, and the actual power consumption is much less.

Jim,

I've been in the computer field for 30+ years (don't laugh), and more often than not, a piece of hardware would fail at 'startup'. I spent many an hour scoping failures in control circuitry, motors, power supplies, and circuit board connections because of power down / power up.

Granted, most of the PC's or intelligent workstations we use today, don't require water cooled processors, or room wide emergency power down circuits, but, we do still have the 'mechanical' failures. How often have you heard of somebody having a hard drive fly apart while they were computing? On the

other hand, how many times to hear of a drive 'being dead' while the rest of the PC powered up OK. Quite often. Contaminents can settle on the disk surface when it's not in motion. They're not necessarily 'air tight'. The combination of particles, moisture in the room, etc, can be pretty brutal on a micropower motor that really only wants to maintain a speed, not haul trash. Anyway, I'm rambling. Leave the PC on, turn off the monitor.

jmaxwell@netcom.com (james a maxwell) shared these priceless pearls of wisdom:

->I'm the ARRL Vice Director in the Pacific Division.

->The topic of this thread isn't new - we've all seen it before [snips] and
->then - nothing. Nothing at all. A few months later someone resurrects
->the thred and the cycle starts again.
^^?^^

Jim Maxwell --

Your response is archtypical of the responses most of us get when we discuss controversial topics with "you-all" or write letters to our "representatives" in the ARRL. "Tut-tut, little whiner, we know what's best."

Go back to my original post. Answer the specifics point by point. Don't shine me on by saying that they are "vague" or "innuendo". I write for a living. I can do vague and innuendo when I mean to do it, and this ain't it. I spent 8 years in elected California politics, and my busslhit detector has been finely honed to the point where I can smell it in your first sentence.

"ARRL supports CW licensing requirements and subbands". Boy, isn't THAT built on air?

"QST articles are poorly edited and technically lacking." There's an ethereal for you.

... and the beat goes on, and the beat goes on...

Go back, Maxwell, and READ the damn thing. Answer it if you can or will.

Jim

I asked a valid questions, and I am continually attacked by you and other users of the group. Why am I discriminated against? And who are you to tell me not to check into this site? Your actions are illegal and outright liable.

You are entitled to express your opinions against someone's views, but you cross that thin line when you make remarks against a persons character and make those remarks to a person or group.

When you make remarks against a person character such as you have, you are then liable for the damages to my business, and my character.

You are an immature fool, Greg. What rubbish.

> Let me help you: the premise at hand is that, on crowded bands (i.e.,
> those where an unassigned pair is not available), open repeaters take
> precedence over (even pre-existing) closed machines. That is all.

Really, please tell us the law or rule that supports this.

You won't be able to because there is no such rule. Who ever
was on the freq first takes precedence regardless of wether or not
they are a closed or open repeater. (Remember, the fcc does not
define a difference between closed or open)

> >Your language betrays your true intentions. What you're really
> >upset about is not a private repeater, but the fact that someone
> >might not let you play on their playground.

That sounds like an accurate description of Greg's problem.

> No, I just don't care for people who erect private clubs on scarce public
> property, then claim that, by virtue of their having built a club-house,
> they now own the land underneath.

See above.

> You know, we hear a lot about the 'rights' of repeater owners, but
> they forget that they are mere squatters, who remain at the pleasure
> of the public.

Actually this if the first sensible thing you have said. You are
absolutely correct, as ANY amateur radio operator or station is really
a mere squatter. However, the fcc does recognize non-frequency agile
relay stations as having protected input frequencies, and does not
recognize a difference between closed or open repeaters.

Jeff, you mean that you don't feel that 40 calls represent the concensus of the Hams in the USA? Me either! This sort of BULL is meaningless. How bout it Len, you want to share with your Internet/Usenet audience what percentage of the total US Ham population, a count of 40 represents? This is hardly what one could consider informative. Even the surveys that Ray Sarrio runs seldom have more than a couple hundred Hams providing input. Why not put together a more meaningful survey that would cover a (statistically) significant population of the US Hams, across all license classes and age groups. Now that would be a bit more interesting and far more worthy of the bandwidth.

>tell me not to check into this site? Your actions are illegal and outright
>liable.

Freedom of speech does not mean you are entitled to an audience.

>When you make remarks against a person character such as you have, you are
>then liable for the damages to my business, and my character.

Opinions, labeled as such, are not libelous/slanderous. I suggest you
research the case law surrounding the circumstances of a major morning
television show commentator who gave a poor opinion of a company's
product and was later sued by the company.

Of course, if you were such a good paralegal, you'd already have done
that.

2536. A Proposal: No-code HF General

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-05 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <32a74f39.10650094@nntp.ix.netcom.com>
Source record: 211095
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

1 - scrap the current general class theory exam and replace it with the advanced class theory. Replace the current advanced class exam with a more difficult exam. As it stands now I think both the general and advanced class exams are too easy. (I am studying for the advanced)
2 - the no-code HF ticket would not be entry level. A minimum of one years operation holding a lesser class license would be a requirement whether it be a novice, a no-code tech or a tech plus.
3 - the current HF band plan be modified such that each of the advanced class phone segments shall be expanded by 25 kHz. If the segments of the bands currently reserved for CW, RTTY and digital modes are to be reduced and those portions of the spectrum are to be added to the phone segments, the extra, advanced and general (no-code) segments would increase in size by 50/30/20% respectively. If 100 kHz of a CW segment is to be change to phone, then the extra class sub-band would get 50 more kHz etc.
4 - current general class ticket holders will not be grand-fathered into advanced class licenses.
5 - no licensee will be grandfathered into a no-code HF license
6 - the novice class license returns to a non-renewable state
7 - the no-code tech exam will be increased in difficulty but will not be the same as the new no-code general class exam.
8 - the tech plus exam will be the same as no-code tech exam with the addition of the 5 wpm test
9 - the licensing authority (FCC) will take a more active role in maintaining proper conduct on the bands either through general monitoring or else following up on complaints filed with the FCC by OOs. (Does the ARRL still have the Official Observer program?) Some sort of valid policing needs to be done now!

novice ticket - 5 wpm, current novice exam, non-renewable, good for 1 or 2 years, no change in spectrum or modes
no-code tech - 0 wpm, current general exam w/slight increase of difficulty, no change in spectrum or modes
tech-plus - 5 wpm, current general exam w/slight increase of difficulty, combination of novice and no-tech privileges
general - 0 wpm, current advanced class license exam, all legal modes, spectrum allocation as modified by #3 above, not entry level
advanced - 13 wpm, difficulty of current exam increased, all legal modes, spectrum allocation as modified by #3 above
extra - no changes from current status

It is obvious that some compromise needs to be made on the issue. This is my proposal. Before the current generals start raising can about

losing 125 kHz of spectrum, please consider that there will be plenty of time to upgrade before a plan like this goes into effect. Also the international regulations would first need to be modified to permit a no-code HF ticket.

How about we have the ARRL have a special fox hunt contest with a *real*
fox. Make up a special award for the most stations located or most
accurate
headings for finding them. And give a special AWARD plaque for the top
20
hounds. We can call it a "Save Our Bands" Hunt award => a "SOB Hunt"
award
for short! ;o)

Seriously, how many of our paper chasers would like to get a special,
limited
issue award for actually helping the hobby and protecting the bands?

With the filing fees for the awards, the next problem could be solved
also!

Only partly jesting... 73's de W6QS - Don Labriola

Gary: I agree completely that it is NOT representative or scientific in any way!
I made that clear in my opening statement. You're right that a meaningful
survey would be helpful, but as far as I know, the only "real" surveys ever
done are by the ARRL to it's members, and, is that representative?

With all the debate about code versus no-code, I just have one comment.

How many of you old-timers were elmered into amateur radio? Out of this group, how many of you have taken the time to get to know some of the newer hams and help them with advancing to a higher class of license.

Think about it, I have heard plenty of the older amateurs on the bands, both HF and FM talking about the good old days when they were elmered into the hobby. But I know of only a few that have stated they are now elmering new hams.

We can all contribute in some way if we really try. I have helped quite a few of the older hams with computer problems and in return they are now helping me with my code practice. Learning is a two way street.

All comments will be welcomed with an open mind.

Try 147.030 (+) on Mt. Bullion, above Mariposa. They were installing a remote receiver in Yosemite the last time I was up there. Also has a 440 rptr. at the same site linked, but I don't remember the freq.

Hmmmm, let's see....75 meter phone is sounding worse than CB
on a bad day, the FCC has been down-sized and do not care,
self-policing is a joke, (what are you going to do, spank
him?) and commercial services are circling our frequencies
like vultures. Sounds like a plan to me, what do you think?
It won't be long now before Congress sells all of the frequency
spectrum to pay for their blunders! Funny, isn't it? They
think they own and can sell something they can't see or touch!
Do they own the radio spectrum, or do we? I wish I could
come up with answers to address the problem, but I can't.
I know one thing, we better do something before it is too late.
One day we will have to pay ATT, MCI, Sprint, or some other
communications giant for every time we key a microphone or
punch on a keyboard.

Just food for thought. What do you think?

Steve, WA3RVT

>

Sounds like the final step necessary before Congress can sell
all of the frequency spectrum to pay for their blunders. Without
the FCC, the already over-sized telecommunications industry
will be free to do whatever they want with the radio spectrum.
Gone will be ham radio, GMRS, CB and other services. You will
no longer be able to own and use your own repeater free of charge.
You will have to pay ATT, MCI, Sprint, or dozens of other companies
for your air time. Why? Because they bought and OWN the frequencies!!
You will no longer have anything to say about it!

Let's think about it. The name of the game is money. The board
of directors of these companies have the responsibility of making
as much money as possible for their company and their stockholders.
They will try to charge for air-time on every device that uses
a radio transmitter. Want a cordless phone? Just fill out the
application that comes with the phone, and they will give you the
access code to make the phone work. They will also bill you ten
or more dollars each month for the privilege of using the radio
spectrum that they own! The same goes for wireless microphones,
baby monitors, or wireless anything. Ham radio? CB? GMRS? FRS?
HA-HA-HA!! Got ya sucka! You bought the equipment, so now if
you want it to work you have to pay them!

How about commercial radio and TV? They have been pushing for
digital broadcasts for years. Do you think that they are just
doing it so you can watch Jeopardy or hear the Rolling Stones
with new realism and clarity? Not in my opinion. They want
to be able to charge you every time you turn on your radio
and TV! With the digital technology, they will be able to do it
because your radio will not work until the unlock code is received.
If you think that it will never happen, just take a look at

satelite TV. What can you get for free on the old C-band?
The Home Shopping Network maybe? Do you think that they went
DSS so you can get better pictures?

Office of Telecommunications Policy? 150 lawyers? HA! I seriously
doubt that this office will be established to watch out for the
public! Quite the contrary! Don't believe me? Just ask these
lawyers how many hold stock in ATT, MCI, Sprint, USSB or any
of hundreds of other telecommunications giants.

This post is just my opinion, but I am seriously concerned that
it may come to this more sooner than later. What do you think?

You will not even have to do that in a majority of cases. Some
of these 80 meter idiots actually have the audacity to trash the
frequencies and the gaul to use their call signs. I don't know
if they are using their real callsign, or not, but it would
be a starting point.

>

I have actually done something like this in a case involving
malicious interference on a repeater. He turned out to be a
co-channel user of our frequency. We found the guy, kept a log
of his activities, got witnesses who saw and heard him, and we
sent all of the information to the FCC. The FCC sent me a
letter back that said, "We no longer get involved in amateur
complaints that involve repeaters. Refer your complaint to your
local repeater coordinator."

Oh well! So much for the FCC. Maybe if it was a complaint
involving the HF bands they will pay more attention, but I doubt
it. The FCC does not really care anymore. A lot of these guys

are just wondering if they will have a job next year.

In other cases involving repeater jammers, we got better results ourselves. We confronted several jammers and told them that we knew who they were and will expose them to the entire amateur community should he continue. One guy actually called our bluff, and now he is "black balled" from every repeater club in the area. Nobody wants him on their repeater, and it is very rare when somebody actually talks to him. When they do, it is usually on simplex.

Unless you want to go over to a person's house and shoot them or take their equipment, there is not much more you can do. You could try bringing a civil suit against him in court, but that takes time and costs money. There is always a chance that you will lose too!

> define a difference between closed or open)
>

This is not true. It depends on which repeater has coordination
and which does not. The FCC only says that in situations
involving repeaters, an uncoordinated repeater has the primary
responsibility of correcting a problem and the coordinated
repeater has secondary responsibility. In cases where both
repeaters are coordinated, they both have equal responsibility
in correcting a problem. The FCC does not say anything about
how long a repeater has been on the air, only about which
is coordinated and which is not.

I have a repeater which has been coordinated since 1986. There
is a user of the frequency that has had a small "backyard"
repeater on the same frequency since the 1970s. The owner
never bothered to coordinate despite many requests from the
area coordinator that he file. When I put up my repeater and
filed for coordination, I was told about the guy, and was also
told that his repeater has been down more than it has been
up for over five years, and it has not been heard at all for
at least 2 years. They granted me the coordination, and as soon
as my repeater went up, this guy fixed his machine and began
to scream, moan and bitch about it. He filed the coordination
papers and was rejected. It is now 1996, and this guy continues
to maliciously interfere with my machine in hope of driving
me off the frequency. Why should I? I played by the rules and
he did not! I continue to have the coordination for the frequency
and he does not.

> recognize a difference between closed or open repeaters.
>

Some repeater owners would not have to privatize their systems
were it not for the fact that few, if any individuals ever
offer help. The help could come in the form of a donation,
or to lend assistance when repairs are needed. Repeaters
cost a lot of money to own and operate, and they take a lot
of time to keep on the air. Everybody wants to use them, but
when it comes time to help out, most people are too busy,
too broke, or disappear. The FCC recognizes this fact and
this is why they allow owners of repeaters to discriminate
who uses them. Your license allows you to use certain
frequencies, including the ones used by repeaters. If a
repeater owner hears you using the repeater, he has the
right to shut off the repeater, but does not have the right
to make you leave the frequency. (assuming that you are
licensed and the frequency was clear when you started using it)

Let's tell it without a chronoplastic infundibulum* - you are talking
about a different station. I'm talking about the one that was at
73 HQ in 1975, in Peterborough. Totally different situation.

While I agree that the FCC has bungled quite a few things I don't feel there's a need to abolish the bureau. What we need to do is give the agency a bit more teeth when it comes to enforcement of it's rules and regulations.

Just imagine the airwaves open to bidders ALL the time. Imagine a world where every bit of information you get will cost YOU money. It's getting close.

Richard, you should get your facts straight before offering any attack on
my stand on this matter. Dave will confirm my view.

I was a member of the WIA for many years during which time it progressively
moved further and further away from supporting me. I had no intention of
joining even if it did bankroll a project for which I had no personal
interest other than a purely technical one in _assisting_. I had no
intention of using the facility, I manage my own gateway. The WIA effectively
snubbed my volunteer support of a project which was in their interest, if
you expect me to join them for that you are seriously mistaken. As it was,
very little bankrolling was required in the modified proposal, we only wanted
frequencies and space on the tower, everything else was going to be funded
elsewhere. If you are talking about the original proposal then it might
interest you to know that I supported John XY's decision regarding the risk
of investment in a PackeTen.

: Fortunately, our friends at MacUni are not preoccupied with old grudges of
: the past (like some people I could mention), and have offered to host the VK2 Web
: page, an offer for which I am very grateful. Thanks Tony VK2TJF!

They aren't past grudges, they are current reasons that I hold for my
dislike of the VK2 division of the WIA. You're lucky Tony still sees value in
the WIA. I commend Tony and Macquarie Uni for their committment.

: I'll notify everyone when the Web page has settled in to its new home.

2554. Where should a new ham start?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-05 00:00:00 UTC
From: mikanton@ix.netcom.com
Message-ID: <32a61085.11251056@nntp.ix.netcom.com>
Source record: 211126

Hello. I am a new ham and am looking to buy my first radio. I
was hoping that I could get some suggestions.

This message isn't going to be written gramatically well. I'm
just spitting out all the questions I have in one big mouthful.

First, I'm wondering what kind of radio I should get. Should I
get a mobile station so I can have more power than a handheld? (I'm
interested in 2 meters). Or should I get a handheld so I can take it
around? What kind of antenna should I set up? One that is inside the
house is ideal, but I don't want to fry my head with all the energy.
Thats also another reason I was thinking about NOT getting a handheld
for my primary radio. Can I put an antenna in the attic? Will I get
poor reception? What kind of antenna could I put up there? What kind
of features should I look for on a radio? If I get a mobile station,
how much should the power supply cost me?

Well, thats about it. I really appreciate any help you can
offer.

Thanks in advance,

Mike

I have a radio shack htx 202 2 meter handheld, a kpc-3 paket terminal, a 12v 2 amp power supply, a 2 meter beam, and a rotor for sale. I am asking $260 or best offer for the whole thing, or you can haggle for any of the items individually. They are all in good working order with a minimum of wear and tear. The handheld's keys are worn and the case has some scratches, but everything works well. I have all the original packaging and manuals as well.

Thanx :~)

Dan Marsh --- KB7TAU

I have a Kenwood TS-690SAT that has only the stock filters. I'm looking for advice on which filters to get and where to get them. I'd like to know which ones you find most useful, and also if there are high-quality filters from other sources at a more reasonable price than the Kenwood units.
Thanks!

>For example, if you have a complaint that somehow involves the ARRL,
>instead of just running to your computer and hammering out a posting to
>..misc or .policy, why not take just one more step? Write to your
>Director (or even your Vice Director!) or Section Manager, lodge your
>complaint, but then *help them find a solution to the problem* if
>a problem actually exists.

I wrote to all of the ARRL directors recently regarding the league's
miserable record of stagnation and backward thinking (I *am* a
"member" ... I paid my money to get QST, but have not felt that the
league has represented my views at any time in the 20+ years I've
been licensed ... I got exactly five answers ... two from people I
personally know ... the others were very much like the quote from the
jerk in MO, who wrote: "Get your code speed up to 30-35 WPM, then
perhaps we'll chat!"

The point is you people (collectively, perhaps *you're* and exception)
ARE the problem in large part ... not a part of the solution. I
strongly believe that another national organization needs to be formed
to break the ARRL's stranglehold on ham radio, particularly in
regulatory matters, where the league outright lies to the FCC by
claiming to represent the interests of *all* US hams ...

>We've all heard about hams who've tried to offer some comment or complaint
>to the local ARRL rep and have gotten nowhere. If you feel that your
>local League rep is doing a lousy job, don't just complain and then walk
>away - *do something about it.* Find out who the individual's boss is
>and tell the boss. If nothing else works, throw the rascal out! Don't
>just come on .misc or .policy and complain, run for office yourself and
>show the world how the job *should* be done. If you don't have the time
>to hold office yourself, find and actively support someone who does.

I don't believe that the ARRL can be turned around from within ... there
are too many entrenched bureaucrats and politics as ususal good old boys
for that ... the league simply must be bypassed by an organization that
will represent the future of ham radio, rather than it's nostalgic past
..

>There are an awful lot of serious problems facing Amateur Radio today,
>probably more today than at any other time in our history. If you
>*really* want to make a difference, you can't make that difference by
>sitting in a comfortable chair at home, tapping out complaint after
>complaint, pot-shot after pot-shot on a keyboard, proud in your non-
>membership in the League. Gary Coffman, who by no means is a League
>apologist, wrote recently "If you care, you have to get inside and
>fight to make things better." I believe that's sound advice.

I think Gary's wrong there ... like I said above, I don't think it can be "fixed" ... I am convinced it must be replaced with something new and uncorrupted.

2558. Computers/Rigs: On and Off Daily?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-05 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bbe24a$b2c60600$a9070ccf@jim-reid-1>
Source record: 211130

Of those or you using computers with their rig operation,
and the Internet for keeping up with Amateur Radio news,
do you turn the computer on/off each day; the rig each day,
or leave them running all the time (monitor powered down
at night, or perhaps it goes into a sleep mode?)

I've been told computer warranties are for the time period of
a year or whatever, whether the machine is on or off cycled
or on forever. About a year ago this topic was discussed, and
many felt the computer should be left on ALL the time for
component long life. Power consumption is relatively low
as long as the monitor is down.

Old days, DX'ers never turned the rig off, but that was a
temperature/frequency drift issue. Wonder about my "new"
1000D with the temperature oven about the crystal: should
the D be left ON all the time?

I have had to replace the hard drive in two computers during
the machine's first 11 to 24 months out of the box. Not related
to drive bearings, but too many disk errors; defrag would not
even run without running scan disk, and then that would not
run. Gateway replaced one still within the warranty, the other
I had to pay for, as it was just out of warranty! These
computers were turned off late each day, and back on the
following AM, 7 days a week; probably should be just
left running.

Any thoughts?

73, Jim, KH7M

>
>If progress is having to learn less, then you can keep it. If fewer
>people today can cope with the tests ("...math class is sooooo
>hard..."), do you think dumbing down the requirements is going to make
>things better?

Most of us no-code *test* advocates support a restructuring of the
testing (and some of us favor restructuring of license classes) ...

>I'm all for minimisation of government interference. However, I have a
>hard time with the idea of removing elements of the tests. Mark my
>words, once the code requirement is gone, the next thing will be the
>remaining technical elements ("...why should I have to learn this? It's
>hard and I'll never use it...").

The FCC will NEVER go for that in the ham service where we are permitted
to build ... remember, as Gary has said "the value of the license is in
what it allows you to do, not in what you did to get it ..."

>I believe the tests are too easy. They should be made more difficult
>AND keep the Morse requirement.

I also believe that the written tests are too easy ... but the code is an outdated requirement that can no longer be justified as a license requirement ...

: Then you should listen more, and talk less.

This posting from Greg was interesting and made some useful points.
However, it unfortunately contains a defect right up front, a defect that
is representative of one of the reasons I finally felt compelled to ship
off the "motherhood" posting I did. His statement that I should "listen
more, and talk less" completely ignores the fact that he has no idea
whatever how I spend my time in service to the League and to Amateur
Radio, whether that service is good, bad, or indifferent, whether I have
in fact acted on ideas that I have read here in .misc and in .policy, or
how much time I spend listening and how much time I spend talking. He
started off, in fact, with one of those gratuitous pot-shots I mentioned,
and later even claimed that I denied that a problem exists!

YES I understand that many of the League's constituents believe that the
ARRL is unresponsive, is organized to protect its own unresponsiveness,
and is designed to resist effective change.

But the suggestions I made in my "motherhood" posting still stand. If you
have a complaint or a suggestion, by all means post away. I'll read it,
others connected with the Board and at HQ will read it, and sometimes action
will be taken. But if you want to make a difference, a *real* difference,
get involved yourself! If you're rebuffed - and I know that happens, -
don't just sit at your keyboard and complain, GET INVOLVED AND DO SOMETHING
ABOUT IT!

>>
>What technical rules need to be modified? What other outdated barriers
>are there? Is there unlimited bandwidth available?

The bandwidths available on the HF bands are based on the idea that
"narrower is *always* "better" ... that is a false premise and the rules
should be changed to permit wider band modes that would allow many new
modes and systems to be implemented ... Gary and I have each proposed
systems that could permit thousands of simultaneous "CW" conversations
in a 200kHz bandwidth ... probably more than enough to support all of
the simultaneous CW QSOs in the world at once ...

>>I would not have a problem with a "time in grade" requirement for
>>advancement from a "beginner's" license to a "journeyman's" license ...

>>
>Two classes so it isn't a caste system but the lower class gets full
>privileges (i.e. HF phone)? Wouldn't time-in-grade be hazing?

I didn't say the "beginner" got "full" privs ... the higher class
license, based on time in grade (experience) and proof of knowledge
(passing a more difficult test) could permit access to somewhat more
spectrum (or perhaps a higher allowable TX power level) ... and NO ...
REASONABLE, RELEVANT requirements are NOT hazing ...

>>Learning CW in today's world IS hazing ... it's a ridiculous "busy-work"

>>
>Never mind that CW is the only mode that a most basic transmitter

>(Pierce oscillator) can use, a prospective ham has to be knowledgable
>enough to know how it works but not not knowledgable enough to use it?

Too many people in ham radio seem to be fixated on simple ... with
today's technology, simple can also mean "I can design a much better
modem that is far easier to use than the "wetware modem" you wish to
require me to use to decode Morse code ..."

>>Commerical interests are NOT phasing out the use of Morse code ... the
>>majority abandoned it in drives DECADES AGO ...
>>
>Decades, is that 20, 30, 40 or more years?

Yup ... much of it started during and shortly after WWII ...

>should the quote from my original post again. "... how a simple Pierce
>oscillator that functions as a CW transmitter can be used for FSK
>without any modifications to make it more complex." Which word in the
>quote is causing the confusion?

I would submit that if you *really* can't readily envision how a varactor could be added to your oscillator circuit to produce an FSK signal, that you really should be recalled by the FCC for retesting ...

>I and many others are open minded about dropping the code requirement
>but to be convinced (speaking for myself) I need better reasons than
>have been given thus far. "I can't do it. It's too hard. It's
>outdated." just doesn't cut it. If someone is unwilling to devote the
>time and effort, is their non-presence a detriment?

I believe so ... many would/could make significant contributions ... they couldn't be bothered suffering through the code ... like the PhD that Cecil works with who can't learn; to the other one who refuses to submit to the hazing ritual ... ham radio, a-la the ARRL CW-forever olde fartz pseudo-religious cult, has systematically excluded many of the best and brightest in the fields of radio and computers for the past 40 years or so ... simply by insisting on the maintenance of the hazing ritual ... I've personally known and worked with dozens and dozens over the course of my 20+ years as a ham ...

>Ham radio for many years was on the cutting edge of technology but
>then there were no advanced commercial R&D labs full of BSEEs and
>MSEEs. Times have changed and are changing still. Dropping the code
>requirement and changing this and that will not allow the hobbyists to
>compete, much less catch up, in terms of technological advancement
>against a single two billion dollar a year company.

As Gary (I believe) pointed out ... many of us in our work lives are forced to concentrate on the immediate designs of products that will reap profits at the end of this quarter or next ... hams can pursue things that have long-range consequences without fear of being cut off at the knees because there's no immediate bottom line payoff ... we can experiment with things that are less certain as hams (yet still show promise) because nobody's going to fire us if we don't deliver on schedule for the upcoming industry event, making 40+point margins at unrealisticly low price points ...

>I, and I imagine many others, are not against change with valid

>newly found HF phone privileges.

Why is it that hams "who beep" are so preoccupied about having exclusive "retreats" where they can isolate themselves from hams who "don't go beep"??? (and where they can tell themselves "We're *so* superior ... look, we have our *own* sub-band and "mere mortals" can't come here ...")

>all, Icoeaswood has done all the hard work for them. So why do you want
>to shove all that useless (to them) theory down their throat?

You're talking about "CBers who beep" ... not HAMS ... at least not hams
as they are *supposed* to be ...

>WRT the charter of Ham radio, the "pool of technicians and electronics
>experts" is rapidly becoming a farce, IMO, precisely because of this
>mentality of stripping out stuff that is perceived as too hard or too
>antiquated.

NO ... it's becoming a farce because too damned many "CBers who go beep"
just buy radios as "tools", don't know shit about radio, and
"just want to yack and play comeptitive games" ...

> I'd love to have a wireless T-1 connection, and fast scan TV to boot!
>The bandwidth required for these modes precludes use on the low bands. These
>are projects for UHF and microwave frequencies that codeless hams already can
>use.

Agreed ... the really high-speed LAN stuff will happen at UHF and up ...
but HF is needed to provide interties (albeit at a lower rate ... but
still quite usable rates ...) with appropriate rules changes to remove
archaic restrictions of bandwith and modulation and coding schemes.

>Computer wiz kid doesn't have to learn a dit of code to get a
>licence!

No, but people don't like to be treated like second-class citizens
either ... HF is attractive and necessary for many aspects of
communications ... access to HF is also necessary for the technically
inclined who could care less about Morse code, but will develop the
modes of the future ...

>The bands in danger of being confiscated and sold are VHF and up.

The HF bands will come under threat, too ... we use them rather
inefficiently ...

>This is the future of amatuer radio. Why load up the crowded HF bands with
>more phone ops, and mindless computer driven QRM machines?

The HF bands are NOT crowded by any standard ... the commercial bands
are far more heavily used than any ham band ...

>There's lots of
>headroom and bandwidth available above 10 meters, no code needed!

And no skywave propagation or international communications ... the privs
"earned" by passing high speed code tests have NOTHING to do with code
.. it's just a hazing ritual ..

My point ... I maintain (from having talked to LOTs of ARRL "members") that the answer in a VERY large percentage of cases is "b" ... most people I know who are "members" ... myself included ... are really "subscribers to QST" because we DO NOT feel that the ARRL "represents" us.

>new open machines! ;o>
>
>73's de W6QS -- Don Labriola

Thats because most of the open machines are listed as "private" a
policy of SCRRBA and others to keep the band from becoming utilized
like two meters. Also there many more machines than actually listed
in the repeater guides. If one looks around, they will find plenty
of available machines for use in So. Calif.

carl@ais.net (Carl Stevenson) wrote:

>It matters a LOT ... because we USED to lead the way ...

Beginning with the invention of the transistor, followed by the
integrated circuit, followed by the explosion of VLSI,
ham radio has ceased "leading the way". In order to be
pioneering today, you either need a strong background in solid state
physics, information theory, or communications. There's
no other way to really understand how a transistor fundamentally
works, how E and H fields interact, or how bandwidth is related to
channel capacity.

For quite a while now, technology in Amateur Radio has been
advanced by professional engineers who happen to be Hams. Not since
the early days (and possibly not ever) have advances been
made by true "amateurs" (i.e. who aren't professionally
employed in a communications/electronics/scientific profession).

So I would argue that CW is not keeping smart people out of
ham radio. The advances have really always been made, and
will continue to be made, by "professionals" who happen to be
Hams on their time off.

>>Morse code is as basic to amateur radio as knowing the Windows API is
>>to writing Windows apps.

>This is NOT a good analogy ... Morse code is NOT as crucial a foundation
>of ham radio in today's world as is the sort of knowledge you refer to
>in programming WinDoze apps ... though why one would *want* to write
>apps for such an swful "operating system" is beyond me ...

Something to do with money, I believe :)

>There is NO reason to deny phone privs to no-coders ... if they are
>qualified to operate AMTOR, RTTY, and new modes that are being/to be
>developed, they are equally qualified to operate SSB ... NONE of those
>modes has one damned thing to do with Morse code ...

Likewise, there is no reason to deny privs to Hams whose wrong answer
to the question about the silver tolerance band on a resistor put them
over the failure percentage.

If your argument is that we should only have tests on things we "need"
to operate radios, then the test questions should only be related to
operator practice and rules.

I'm not sure if I posted this or not, but...

The VE7TCP Internet DX Reflector (mailing list) is back on-line after a long absence. It came back up just before the CQWW CW contest.

If you are already subscribed, you probably have seen many messages come through.

If you are NOT subscribed but want to be, send a message to:

dx-REQUEST@ve7tcp.ampr.org

and in the body of the message put only the word

SUBSCRIBE

You will get a message back with instructions on how to "authorize" your subscription. Please follow the instructions, and make sure to send the "auth" string back on a SINGLE line (some E-mail programs wrap long lines, you must disable this feature on your program).

If you want information about the list, but don't want to subscribe just yet, just send a message to the same address above but put the word

INFO

in the body of the mail message.

>>> still legal for a user to unblock cellular reception...

Actually, the idea of buying a "general coverage" receiver that has
been deliberately crippled ticks me off so much that I asked Icom
exactly what the law was on this. They referred me to a paragraph
of the CFR, which referred me to a paragraph of the US Code, which
says that if you "manufacture, assemble, possess, or sell any electronic,
mechanical, or other device, knowing or having reason to know that
the design of such device renders it primarily useful for the
purpose of the surreptitious interception of wire, oral, or
electronic communications, and that such device or any component
thereof has been or will be sent through the mail or transported in
interstate or foreign commerce," then you can be fined or imprisoned
or both. So modify your radio at will, just do it with homemade parts
and never sell it out of state.

Don't be foolish, Bark. What goes on there is giving SoCal hams
a black eye. Everytime someone with a scanner comes across that
rptr their opinion of amateur radio sinks. Our greatest ally, the
news media, have scanners, too, you know.

We'd keep a scanner on at the fire station. The PD would have one
running in their offices upstairs. The newspaper office always had
one on. Scanners are everywhere, and they're all capable of monitoring
2m. And many of the listeners are the ones who decide what role hams
play within a city or county communication plan. Remember that next
time you hold your mouth up to your 2m pacifier.

Having problems with antenna restrictions? Maybe one of the folks who
drafted the regs owns a scanner and didn't like what he heard.

Why don't your ever sign your posts or give your call? Are you on the
outside looking in?

With all due respect I think it's time to think seriously about
quitting that club. Sounds like a Communist organization to me.
Sheesh. . . Perhaps if all the members who are serious CW operators
got together and walked out, the leadership would get the message.

Hello all you Island bound snow covered people, I just got another modem
and have joined up with a local BBS just so I can use E-mail, my new
adress should show up on the top of this message but just in case it
doesnt here it is....."ronparks@alink.islandnet.com"
I hope you get this as you didnt say if you were back on the internet
or not. I had my catarac surgery yesterday, I went in at 8:300am and
I was out again at 10:00am hows that for speed? I went in and got the
dressing off and the Doc says I am only one point off of 20-20 with that
eye, and that its is very good for only one day. Mom is feeling a lot
better these days she still has a bit of a cough but its getting better
all the time. LET ME KNOW IF YOU DONT GET THIS..Mmmmmmm ! !
bye for now lots of love Mom & Dad.

Source record: 210962

I recently came across an opportunity to recieive sevral boxes of older electronics equipment and liturature on the subject. I would like to get started in electronics and thought this would be a good chance.

Anyway I have two boxes full of old Radio Craft magazines. This is what I have found so far:

1937 - aug. sept. oct
1938 - feb. mar.(50th yr of radio) apr. may. jun. jul. aug. dec.
1939 - jan. feb. mar. apr. may. jun. jul. nov.
1940 - may. oct. dec.
1941 - jan. feb. mar. may. jun. jul. oct.
1942 - oct. dec.
1943 - jan. mar. apr. may. jun. jul. aug. sept. nov.
1944 - jan. feb sept. oct.
1945 - feb. aug.
1946 - oct. nov.
1947 - jan. mar. apr. may. jun. oct. dec.
1948 - aug.
1950 - oct.

I don't know if ayone can help me but if any ones interested mabey you can use them more than me. I also have alot of mid-70's to mid-80's electronic magizines and post WW11 Popular Science, Mechanix Illistrated, and Science and Mechanics. I have Old books on repairing appliances too. I dunno what to do with them.

Source record: 210964
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

I recently picked up a Tek 491 spectrum analyzer at a flea. It seems to be working fine, but I have one question: How do you calibrate the vertical (signal strength) scale? Short of having a signal generator of known amplitude at the desired frequency, I haven't figured out how. Right now, I'm using it to measure 860 MHz signal strength around the apartment to see how much is coming in from a new SMR site being installed 25' above us...

Also, any recommendations for who to get a user and service manual from?
Thanks and 73.
/mike

>claiming to represent the interests of *all* US hams ...

Be careful, Carl. The League may attempt to *imply* that they speak
for all of amateur radio, but I haven't found a filing yet where they
actually make that claim. In fact it is the FCC which likes to assume
the ARRL speaks for all amateurs because it makes *their* job easier.
Only in cases where the FCC's nose is rubbed in the fact (like in the
code test free Tech case) will the FCC acknowledge that there are other
points of view besides the one presented by the League.

The League does nothing to disabuse the FCC of this desire for SPOC,
of course. It would be foolish for the League to do so since it would
serve to diminish their influence. In many cases, that influence has
been to the advantage of amateur radio. (In others it hasn't, of course,
but whose fault is that? Isn't it the fault of those others in amateur
radio for not speaking up and letting their voices be heard?)

>>We've all heard about hams who've tried to offer some comment or complaint

>are too many entrenched bureaucrats and politics as ususal good old boys
>for that ... the league simply must be bypassed by an organization that
>will represent the future of ham radio, rather than it's nostalgic past
>..

Fat chance. That's been tried before, with considerable sugar daddy
backing, and failed miserably. (I know, I was one of its members.)
Membership peaked at about 12,000 before it fell apart. That number
was ineffective as a counter to the ARRL, but that number *inside*
the ARRL political machinery could have had extraordinary influence.

It is extremely difficult to build up a large new political organization (ask Ross Perot). The infrastructure requirements are enormous. It is far easier to take over an existing structure (ask Newt, or the boys now running the NRA).

But you're welcome to try. How many members of your new organization have you signed up? Who's your Washington lobbyist? What is the name of your house organ? And how many subscribers does it have? Who are your precinct captains? And how effective are they at turning out the graveyards at election time?

Don't you realize that in many cases League offices are filled by elections where the annointed runs *unapposed*, or whose opponent is only Tweedledee to the other's Tweedledum? There is enormous opportunity to present a real alternative to the electorate. And if you have done your grassroots homework, they can win big time.

Many field organization posts go begging, but it is those field organization posts which form the nucleus of precinct captains who turn out the vote. Most amateurs don't know the people they are voting for, they just vote the way their local field representative (who they *do* know) recomends. If you just show up and show a willingness to shuffle paper, those field posts can belong to you and your cohorts. Whoever controls the flow of paper, ultimately controls the party (if they have any realpolitick sense at all).

If you want to make a real difference, you and your likeminded cohorts will offer to check QSLs for awards, volunteer to run a public service net, volunteer to be a TA, agree to act as local PR liaison with the press, etc, etc. And you'll be *cheerful* about it damnit! That's how a party is taken over. It isn't done by a dramatic stroke at the top, it is done by burrowing away from the bottom of the pyramid.

I can think of one ham that would have actually liked this! His license lapsed and he did not find out about it until it was too late, he actually was "bootlegging" his own call! The FCC made him start completely over from Novice, and he lost his 2x1 callsign.

I think what was worse is some clown sent me a note after I'd changed my callsign under the vanity system and wanted $14.95 to mail me an official looking certificate he'd printed up in some certificate-making program. Big Fat Deal.

Don't just listen, put out a call from time to time too. Band openings are frequently totally missed because everyone is just listening and no one is calling.

>Depending on where you live, you might get some Auroral propagation.
>If you want to invest in power and antennas, you can try meteor-scatter
>or even EME on six. But none of this fun comes on FM.

And if analog modes aren't your cup of tea, try meteor scatter with data modes. Use GMSK or PSK, use high speed (9.6 kb or 19.2 kb), and set retries to infinity. If you can implement memory ARQ, do that. An FM transmitter can suffice (Manchester Code), but you'll need a SSB receiver. A microsat ground station should offer most of what you need. The ordinary sporadic meteors that fall to Earth every hour of every day are sufficient for a 100 watt station with a 3-el beam to do consistent contacts out to about 1500 miles. You don't have to wait for one of the showers required for analog modes. Government hydrographic stations do it every day just outside our 6m band. We can do it too.

Obviously you'll want to make schedules for this sort of activity since it isn't yet common on the amateur bands. Here's a chance to do some amateur pioneering at little cost. And it can be a worthwhile alternative to HF Skipnet activity for data forwarding.

> use it?
>

By virtue that Christensen wishes to talk on non-type approved equipment on non-assigned frequencies where the installation of that equipment and the intended modes of communication is not subject to prior approval by the regulatory agency while using power outputs and ERPs far and above what is necessary, the answer is yes. If it were otherwise, then a theory examination would be also unjustified.

> For the reasons of eliminating CW from the exam, then perforce, we can
> eliminate the theory portion too.

No, Christensen is incorrect in his deduction. The reason for eliminating the CW examination is that it can no longer be expected that amateurs will have to respond to the orders of an official station to cease transmission due to interfering with a commercial station (See the RAC response to the FASC with respect to the need for the continuance of the international requirement for Morse code testing.) It can hardly be deduced that theory testing could be likewise eliminated.

This goes to the heart of the matter of the role of the FCC in the United States, or Industry Canada in the True North Strong and Free, or any other administration that regulates the amateur service. The role of these organizations is indeed to mitigate interference among the users of the radio frequency spectrum. The testing of Morse code does not nor can it be modified to do so. Yet, testing on electronic theory, unlike Morse code testing, is the only means, at the present time, in which these regulatory agency has assessing the merits of an individual to operate an amateur station. (There are other means - a true practical examination and station

inspection, but that was abandoned, at least in Canada, about 70 years ago due to lack of resources. I doubt that any administration is willing to replace one programme with another that would provide no change in benefits but with significantly higher costs.)

If the current national programmes were insufficient, we would notice a significant number of infractions issued to amateurs for out of band operation and other such infringements. There is no such indication that amateurs are a significant burden with respect to interference to other users of the spectrum (there may be much harumphing about the behaviour of certain individuals within the amateur bands, but that is an intra-service problem and on an annoyance scale of one to ten, comes in at about a minus two in so far as the regulatory authorities are concerned.)

Indeed, due to this lack of infringement characteristic, one must applaud the current theory examination because it would seem that amateur's lack of operational incapacity is in the effortless application of their abilities. In other words, our duties and responsibilities to other users of the spectrum are so ingrained as to be second nature. Thus, the FCC would be foolish to remove theoretical testing when indeed compliance by amateurs, due to that testing, is unconscious.

2606. Dymek ? Does Anyone Know Where They Ran Off To ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-06 00:00:00 UTC
From: op-205@uptimenet.com
Message-ID: <58a1ag$fj5@news.igc.net>

I need a user manual for the Dymek DR22 All Wave Receiver, but the numbers listed in the service manual are no longer operable. Anyone have an idea ?

Alot of the boards inside are made by Texas Instruments, this isn't a subsidiary is it ?

Jennifer.

The Executive Vice President job is a paid staff position.
The EVP serves at the pleasure of the BOD, like any other
employee. Are you really suggesting that employees be required
to stand for election? I guess you want Ed Hare out on the
campaign trail instead of back in the lab too.

In a manner of speaking, the EVP stands for election every time
the BOD meets since his continued employment is dependent on their
approval of his job performance.

Membership organizations with unpaid part time elected officers
require a paid professional staff to handle the day to day affairs
of the organization. And that staff needs a leader. The leader has
to be another paid professional, in this case Sumner.

If the membership at large wants him gone, they can elect a BOD who
won't approve of his job performance. Think of this like a city
manager form of governance. The city council hires the city manager
to handle the day to day affairs of the city, and can fire him any
time they don't like the job he is doing. If the people don't like
the job he is doing, they can complain to the city council, or
elect a new city council.

Hi all,

I have now finished moving the WIA (NSW) home page, which now lives at the Mathematics, Physics, Computing & Electronics Department of Macquarie University here in Sydney. Many thanks to Tony Farrow VK2TJF and Craig Pattison VK2BTQ at MacUni for making it happen!

The URL of the page is now http://marconi.mpce.mq.edu.au/wia/, though the old URL will still work for the time being, directing you to the new location.

The WIA (NSW) email address remains unchanged (wiansw@sydney.dialix.oz.au)

I still have to set up the hit counters, and to inform the search engines about the new location; I'll also attempt to send email to those pages that I can determine have links to the page at its former location.

Interested in microwaves and hilltopping?

Need more info on equipment, operating and techniques for bands > 1 Ghz

The European Microwave News is a dedicated news source for all microwave operators interested in any band/mode above 1 GHZ.

We publish a regular newsletter available by simple email subscription or you can download a copy from our web site.

The newsletter is FREE to anyone and all that is asked for in return is a small item for inclusion in the newsletter, outlining your operating plans, reports of contacts made and any news items of interest to others.

The web page is a mine of information and even includes on-line catalogues from some of the top manufactures. Also included is a wide range of links to other pages of microwave interest too.

Interested?

Then either:

Simply send an email to: emn@pacsat.demon.co.uk
including the first word of the text as 'subscribe' and I will do the rest!

or

The latest issue of the EMN is also available via the web at:

www.pacsat.demon.co.uk

Look forward to hearing from you

: "subscribers to QST" because we DO NOT feel that the ARRL "represents"
: us.

I will admit to being one of that crowd.

My days of being a ham date back to 1966. When ARRL pushed Incentive Licensing back then, I quit, and didn't "rejoin" until thiry years had passed. Since no one saw fit to "grandfather" General-class hams at that time, I still have one more element to pass before I regain all the frequencies for which I had rightfully qualified to use, and was using.

I have always enjoyed the magazine. One reason that so many of us are, in reality, just subscribers, is that:

a) it isn't easy to find QST on the newsstand

b) even if it were, it makes no sense financially to pay the higher cost at the newsstand versus the cost of "membership"

> of a CW segment is to be change to phone, then the extra class
> sub-band would get 50 more kHz etc.

Ludicrous!.... why sacrifice the rights and priviliges of fully
licensed operators that use CW, HF Packet, and Pactor (to name a few)
regularly to give more room the HF "no coders"? I use the Digital modes
as well as SSB. Make them work for it like everone else did! Just
because you do not use it do not assume that others do not. With any
opening 20m CW can be packed and rewarding. I am listening to 160 meter
CW as I type.

> 4 - current general class ticket holders will not be grand-fathered
> into advanced class licenses.

irrelevant.....

> 5 - no licensee will be grandfathered into a no-code HF license

irrelevant....

> 6 - the novice class license returns to a non-renewable state

what would that gain? Some operator are happy with its privileges. Are you going to make them go back to Xtal control too? (I used Xtal control when I started in 1970)

> 7 - the no-code tech exam will be increased in difficulty but will not
> be the same as the new no-code general class exam.

Why??? what will you gain the cows are out of the barn yard!

> 8 - the tech plus exam will be the same as no-code tech exam with the

Maybe the commercial interests are the ones doing their thing om
75 meters so as to set up a scenario whereby they can grab the
frequencies.

Consumer Reports has the opinion that frequency bands belong to
the public -- like AIR.

Yes! But it's not CW that's holding the hobby back. The upper UHF spectrum is a natural for the development and use of these ideas, not HF.

Exactly. Does anyone really think that all these "young and brilliant" minds are going to come into the hobby in droves without an HF CW requirement. What's impetus? That whopping fast 300 baud packet? SSB? Slow AMTOR/PACTOR speeds?

The technology and future of the hobby is not being thwarted by an HF CW requirement. The focus should be on upper UHF spectrum and above where we can apply LAN speed and spread spectrum technologies. Several years ago, we opened up these frequencies to a no-code group. What progress have we made since? Anyone?......

True. For the very reasons the no-code faction wants to eliminate CW testing, then by analogy, we can eliminate the theory portion too.

If all I want to do is communicate, why should someone force "all that theory" down my throat?

I agree Dick. The Testing of CW is not what's holding back the hobby. It appears that most everyone in this news group has forgotten that we have a no-code license as an option. Everything that's available on HF (plus much more) is available above 30 MHz. Nobody trying to get into the hobby is saying "Eliminate the CW requirement so that I may use 300 baud packet."

Apparently you didn't really study for your test but memorized the
questions instead. If you did study you would know what ctcss was and
sub-audable, DTMF, and PL.

Hi Len, seems as if I stepped on your wanna-be-a-broadcaster toes.
As I recall, your earlier ad said that you wanted calls to be brief,
in the yes/no catagory. Thirteen seconds is a long time for just that
kind of response. I realize you're against the code requirements so
I should have expected you to resort to a personal attack.

I must say "thank-you" to you for keeping your broadcasts off the ham
bands, unlike K1MAN.

(21 year Tech+)

Hi Carl,
"Rabid"? I guess the truth of my statements really stings, huh? But
you still haven't answer my long-standing question: You accuse CW
ops of not knowing how their radios work, yet CW ops are probably
the largest catagory of builders these days. So how many of the
radios that you operate are ones that you've built yourself?

73 friends,
Jeff KH2PZ

Judge not lest ye be judged. Let he who has not sinned throw the first
stone.
Pick on new amateurs so they will think everyone in the hobby is an
asshole like you.

Just my opinion

Jim/KI0BB By the way, I memorized the questions and have no idea the
difference
between a watt and a volt. The requirements say I have to pass the
test...Not
know the material.

Based on what Jim? You've failed to state a cause in the preceding
paragraph
for keeping the theory. By the way Jim, I'm playing Devil's Advocate
with you on
this one only to make a point with regard to the elimination of CW.

> This goes to the heart of the matter of the role of the FCC in the United

> testing, is the only means, at the present time, in which these regulatory
> agency has assessing the merits of an individual to operate an amateur
> station.

No Jim, your deduction is incorrect. Why does one need theory in order
to
understand where his band edges are? If a station causes interference,
it's not likely to be detected and solved by passage of today's amateur
theory. Perhaps you have a much different written exam in "The Great
White North?"

> Indeed, due to this lack of infringement characteristic, one must applaud the

> foolish to remove theoretical testing when indeed compliance by amateurs, due
> to that testing, is unconscious.

How naive Jim. The cold must be affecting the blood flow. One doesn't
need
an understanding of theory in order to read and understand a frequency
chart.
Furthermore, all modern radios employ out-of-band transmit protection to

other
services in addition to very high accuracy frequency displays. I suspect
these
are the *real* reasons for interference avoidance.

Regarding needing the teraohm resisters at every node...

My humble guess:
The simulator algorithm needs to "converge" to an operating point before it can start simulating. The problem is, capacitive elements look like they have open or "floating" nodes with respect to an arbitrary "ground" node. If a DC voltage or DC current cannot be computed from every element's (remember that for a capacitor z=1/(wC)) equasions, then an operating point for the whole "circuit" can't be found. You can't pass go, you can't collect $200.

But in real-life, you say, the answer is obvious, "With a constant V source, the capacitor voltage is V and the current is 0." Well, sort of. Every real component has losses, leakages, and parasitic elements. So sticking a teraohm resister in parallel with the capacitor (or from any node to the reference, for that matter) is probably less realistic than all of the parasitics and leakages that usually aren't put in by the modeller, and it means the simulator can guarantee it can find an operating point.

Summary: IMHO, don't sweat it. It's a necessary DC simulation artifact.

Source record: 211001

My name is 'Roger'. I *hate* when people put a 'D' in my name.
Especially when it's spelled correctly in several places, and in plain
view to the reader.

Let's just step back for a moment. I am not saying "who the hell cares
about what happens in Guyana; it's of no consequence to REAL people." I
am simply saying that ONE band, - 440 MHz at that - being taken away
from amateurs in ONE country, doesn't signal the coming of the Grim
Reaper to all hams in the civilized world. 30 bazillion people in China
can't have licenses AT ALL. Or Albania, Mongolia, Burma, Vietnam, Laos,
lots of African countries where they need food rather than radios, Iraq,
Iran, Syria, Yemen, blah blah blah.

So, no, I really don't fret about Guyanan hams losing 70cm. I'm sorry
for them, but "stuff happens."

However, I was mainly remarking on your tone, which was rather dramatic:
"Take away my license..over my dead body," for example.

I am deeply concerned with the trend towards making radio spectrum into
a commodity. I think it is yet another straw on the back of the camel
that is our increasingly shallow, greedy, 10-minute attention span
society. However, only through quiet and dignified determination are we
going to hold on to our privileges. The bottom line is that amateur
radio must continue to provide value to the general public, both in the
form of service and of R&D, for it to mean anything to the bodies that
make the rules.

So rather than dragging your equipment to the Brooklyn Bridge and
getting ready to jump with it to save your license, consider doing
something productive instead.

As for your references to my company, I have nothing to say. I'm a
software engineer, not a radio spectrum kidnapper.

> There is no longer any legal justification for
> requiring knowledge of a 19th-century communications mode to obtain an
> amateur radio license. If you still want to start your car by use of
> a hand crank, fine...but you have no right to force it

First of all, it's an early 20th-century invention, not 19th. Second, the car analogy isn't quite right:

CW is to modern radio communications what a '65 Mustang is to automobiles. It gets lousy mileage, isn't that comfortable, has no airbags/ABS, and doesn't shift that smoothly. But... it smells of steel and oil and grease and goes real fast. On any sunny day in the hills you'd rather drive one than even sit in that Camry or Accord. And that's why we love 'em. And you'll never get them off the modern roads despite the electric cars, over-priced luxo-sedans, and generic "for the people" econoboxes.

And yes, you might just be stuck having to drive one, and then you'd be up the creek. So that's why we love CW, and the kicker is that it doesn't pollute the air - or the airwaves. So get a life and learn it. I am so sick of all the B.S. on rec.radio.amateur.* about this topic.

Source record: 211003

Those who think code is outdated just don't know what they are talking about. Most have never used code and those who did only used it to get their license.

There is a movie out called Independence Day. Yes it's sci-fi fiction but in the movie there
is a national disaster and the only communication that worked was CW. When all else fails you can use wire and a battery for a CW transmitter. If a nuclear device ever went off, the EMP would take out all the computers and much of the radio gear. A battery and some wire may be your only transmitter. But if there was no one on the other end who could copy code????? Oh well.....Reqiring all Hams to at least have a basic idea of code is a great resource in such an emergency. If it were not "required" most would not bother learning CW.

My Opinion,
Don W6IQ

I agree that all the Ham tests are too easy. The Advanced test is not bad but the Extra although it covers a lot of material, the actual test is too easy.

As far as the License classes.....I do not see the benefit of changing them. As far as code
goes..... the multiple choice question test is much too easy. You can guess and pass.

What ever you call the license....."No Code.....No HF"

My Opinion

Well maybe the called party would get the idea that he wasn't being heard when the caller doesn't respond to him. I still think "nothing heard" is stating the obvious.

There are lots of others:

1. Saying "w1xyz for ID". Is there any time you use your call on the air when it doesn't count for "ID"?

2. CW abbreviations on phone. My favorite are the guys who laugh on phone by saying "hi hi".

Carl is missing the point completely. The point is that *one* person, has decided what the club is to do in regard to the special event station. It should have been brought up as new business and put to a vote. Carl seems to think that it's OK because the president is acting in the club's best interest. He thinks that a majority vote on the matter might result in something that wouldn't be in the best interest of amateur radio. Be that as it may, the matter shouldn't be left to one person to decide.

>repeater has secondary responsibility.

This isn't 100% true either.

Prior to receiving coordination, most repeaters have to go through
a "construction" phase where you are tenatively assigned a frequency
and you set your machine up and operate for a period of time (3-6
months). During that time, if you do not interfere with anyone else,
you should receive your primary coordination papers.

Now. Let's assume I am operating an "uncoordinated" repeater on
Frequency A. The local frequency coordinator assigns you Frequency
A on your construction permit. You set up, and interfere with me.
Is the onus on me to clear up the problem? Absolutely not. I
occupied the frequency first, and was in operation prior to your
"tenative coordination". Therefore, it is your responsibility at
that point to ask for another frequency assignment from the FC.

>I played by the rules and
>he did not! I continue to have the coordination for the frequency
>and he does not.

There is a generally accepted timeframe for repeater downtime that
constitutes "vacating" the frequency. If this guy's machine was down
for two years before you put your machine up, I would say that he
had vacated the frequency. If he was in operation when you received
your construction permit, I would agree with him that the onus is
upon you to clear up the interference by moving to another frequency.

I am sure that we all read this number as having all the veracity
to be expected from someone who repeatedly denies that the Number
States in the Union is 50 and who forges news postings to pretend
that he has at least one supporter.

Me and my size 9 foot! Have I just earned my very own Class Action
Complaint?

>
>

I wouldn't worry so much about Fry's managing to undercut any of the present ham dealers, because Ham dealers are already getting a minimal rate of return, and Fry's isn't exactly known for the lowest prices no matter what. What this will do though, is cut down on the profit margins of the existing dealers, and one or two will probably disappear ala Tucker's. One can't make a lot of money, and sell cheap gear to only a few hams. I also haven't been badly treated in a ham store since 1981, and that company is gone into the dim recesses of memory now. It's not all that difficult to see that ham stores are already not very profitable by finding out what the rate of return is.

I would suggest that Kenwood doesn't need more outlets, it instead needs more sales, and those sales are only going to come with growth in Amateur numbers, which isn't all that likely. Let's face it, even hams who are on the air, may find more stimulating intellectual pursuits on the internet than on 20 or 80 meters. -art clemons- n8blk/3

2649. CW & the TS-50

Source record: 211019

I own a Kenwood TS-50, and while it's a good mobile rig, I wonder if installing the CW filter for the TS-50 is any more effective than using audio or dsp filters. I'm not a big CW fan, but copying CW without any aid on the TS-50 can be difficult if there is a great deal of operation.

From: albraun@socketis.net
Message-ID: <5898c1$oj3@news.sockets.net>
Source record: 211020

A friend of mine whose license is expiring soon just got a letter in the mail from W5YI, that included a 610, a return envelope (to W5YI!) and an offer to renew his license for him in exchange for $6! There was an uproar a few years ago when Fred was doing the same thing for $5, which led to the FCC starting to send out renewal reminders. Unfortunately the FCC has recently quit doing that, so along comes good-ol' Fred ready to scam his fellow amateurs again, charging them $6 for something they could do themselves for free.

This sort of opportunism really aggravates me. This seemed like the best forum for letting a lot of people know about it quickly.

BTW, I have bunches of 610's and will be happy to send one to anyone who needs it in return for an SASE.

That's all very well, Jeff, but I have no HF rig. With my newly-minted first
license (tech+ three weeks ago), I bought a 2M HT and a few accessories. I
have no money to buy anything like an HF receiver. I'm studying for my General
and Advanced (the tests are easy - it's the code that's a bitch). All I have
for practicing is computer-generated code and the ARRL tapes. Once through
the tapes and I know them too well to use them again - a couple letters into
each sentence and I can anticipate most of the rest. I'm OK at the computer-
generated random letters, but when I start getting real words, I automatically
try to interpret the words as they come in, which takes my attention off the
primary task - translating the code! My speed drops from 13 wpm to below 10.

I could REALLY use some help here - would some kind hams please email me some
text files containing example QSO's? Best to send as attachments so I don't see
the contents. I can feed them into my code practice program and get used to

copying words as opposed to random text.

Thanks in advance for anyone who helps.

I hate to continue this tiresome thread but now that I have been
threatened.......

Mikey....some advice for you - free and not $4/month.....

1. Keep working on your "You can be a paralegal too!" at-home course.
Someday you are LIABLE to complete it.

2. Read the section in your "How to get rich quick on the internet" manual
about
how to use a mailer WITH a spell checker and actually USING the spell
checker.

3. I advise you to fully disclose what happens to your customer's pager
service
after the money they paid runs out. You did do that, didn't you?

4. Since you say....

"YOU HAVE NO RIGHT TO DISCRIMINATE OR COMMIT A
FEDERAL BIAS OFFENSE AGAINST AN INDIVIDUAL BECAUSE OF
THEIR RELIGION OR 'BELIEFS'."

....then I believe you are a moron trying to get rich quick on the
internet while attempting to complete a paralegal at-home course.

5. Stop threatening me.

Just my 5 cents works.

Please respond with personal email so we can kill this thread.
Dave - ka2ctn@ix.netcom.com

To whom it may concern:
I heard a bit of Terrifying news last night on the Amauter Radio
Newsline last night; The Guyanan goverment has kicked It's amatuers off
70 cm. In favor of a sattelite service with the blessings of the ITU!
This does not bode well for the future. What's next? Will we lose 2m.?
HF? The camel's nose is no longer in our tent; It's gone way beyond
it. We've got to seriously push it out before we lose the ENTIRE tent.
I did NOT work 20 years to get my ticket just so I could lose It a
few years down the line to some money grubbing comglomerate. Also,
I would remind theese Alpha Hotels that WITHOUT Amatuer Radio, your
bloodsucking comglomerates would not exsist in the first place.I'm sorry
if I ruffule a few feathers with this, but The time for coddling the FCC
and the Itu in this matter has passed. ALL Amatuers, coders and
no-coders alike should declare in one voice that we will Not go silently
into the night,nor give up WITHOUT a fight. I will give up my ticket
when they pull it out of my cold, dead hands.

Opportunism? Service to the ham community? What if Fred only charged
$2 or $3? Would that be acceptable? Remember, Fred is in business to
make a profit, not just to make friends and influence people.
Perhaps Fred has determined that it costs him $6 to research, prepare
the notification, process the form back to FCC, etc. It's kind of
like folks to overprice boat anchor radios only to hear the hollaring
about the crazy price. If you don't want to pay the price, don't let
it bother you. In reality, there are probably lots of folks who
appreciate Fred's offer to help. They either are unaware or when
their license expires, don't know how to renew, or don't have the
time. Opportunism? Service to the ham community? Probably a little
of both.

I would not leave monitor on unattended due to the risk of spectacular failures (fire and smoke), but I let the rest of the system run continuously. When using stable operating systems such as Windows NT or Linux, it is nice to be able to leave applications on and continue with the applications exactly where you left it the previous day. These operating systems also have quite long boot and shutdown times. However, less stable operating systems (such as Windows 3.x/95) work much better if they are regularly rebooted, so there is not much advantage of leaving the computer on for the night.

>Old days, DX'ers never turned the rig off, but that was a

I do not know about the FT? 1000D, but all test equipment with oven that I have seen did not have an ON/OFF switch but rather an ON/STANDBY switch. The oven is powered as long as the equipment is plugget into the mains socket. If this is not the case with your 1000D, then your rig will drift a long time after it on until the oven temperature is stabilized.

>Worth noting that the power supplies in computers are generally rated at
>somewhere in the 150W to 250W mark - a bit expensive to leave on
>permanently!

The actual consumption is usually quite less than the rated output power. 150 W would mean about 20-30 A from the +5 V rail (depending of the efficiency of the switching mode power supply and the consumption of the +12 V rail). The consumption of the CPU card and drives is usually much less. The consumption from the +12 V rail is quite low, since there is no need to start the floppies or the CD-ROMs during idle time.

Note that if you are using electric heating, the heat generated by the PC will reduce the consumption of the main heating elements, so the total consumption (and your electric bill) remains constant regardless if you turn your PC on or not.

However, in counties where air conditioning is used to keep the rooms cool, the cost of not turning off the PC when not in use is much greater.

The Government's legitimate purpose? Where was their "pupose" when they eliminated all theory from the Citizen's Band exam back in the '70s?

If we eliminate CW testing as a compelling need, perhaps we should eliminate all theory from the amateur exams too. Do I *really* need to know all that dreadful theory when all I want to do is talk? My MUST I have all that theory "forced down my thoat" if I don't care to learn or use it?

For the reasons of eliminating CW from the exam, then perforce, we can eliminate the theory portion too.

>73, Jim KH2D

Yeah, but that had better be a darn special resistor. Most 100 watt
resistors will have far too much inductance at HF to be a good dummy
load. As far as I know, there are only two companies making power
resistors in that range which have low enough inductance. Used to
be you could use a bunch of paralleled 2 watt carbon resistors to
make up a low inductance dummy load, but carbon composition resistors
are disappearing. The carbon film resistors replacing them have, you
guessed it, too much inductance.

As a newbie I am I am lost as to which radio to buy. The only thing I am sure of is that I will buy a handheld. I am leaning towards a tri-band because I do not know what's on what band, here in Chicago.

1. Do I buy a tri-band radio or do I pick a band and live with it, or end up with multiple radios?
2. Is there some reason never to buy a multi-band radio?
3. What is a CTCSS encode and decoder?
4. What is sub-audable tone scan feature?
5. What is DTMF paging?
6. What is PL encoding?
7. Do I buy Alinco, ICOM, YAESU, Standard, Kenwood?

Umm...Dave, I think you'd better lay off the espresso for a bit. I don't think that an action in a small South American country is going to result in a drastic, sweeping ban on your U.S. operating privileges. Remember, there are quite a few countries where you essentially CANNOT use a radio AT ALL.

Typical elitist ham attitudes displayed all over this newsgroup. Sorry, but the code IS outdated. There is no longer any legal justification for requiring knowledge of a 19th-century communications mode to obtain an amateur radio license. If you still want to start your car by use of a hand crank, fine...but you have no right to force it on the rest of us.

The code requirement will be abolished soon. Either the ARRL and the FCC will get with the times, or else it will be challenged in court.

2666. Re: W5YI at it again!

I don't see what's so awful.

If someone doesn't want to use the service, then they should not.

If someone doesn't recall the fee structure, or doesn't know the
procedure, or forgot that they needed to renew after years of
inactivity, then the service (reminder and mailng to the right
P.O. Box and zip in Gettysburg) might be worth 6 bucks.

In fact, it might take me 15 minutes to locate a 610, and come up
with the right address. 15 minutes of my time goes for a lot more than
6 bucks, these days.

And the preparation and mailing of a business letter on your
behalf (two if you count the reminder) is a bargain at $6.

Just because I prefer to walk from 57th and Lex to 49th and
Third doesn't mean I resent the cabbies who will drive me there
for a fee. In fact, I might pay them if it happens to be raining.

So W5YI tenders an offer of service (and even gives some in advance,
via the reminder the advert brings). It's up to you if you use it
or not.

If his activity *did* cause the FCC to mail reminders that's good
and bad. He did a service by causing it to happen, but did the
tax-paying public a dis-service by causing us to pay for the
extra mail to remind people about what they should have taken
care of anyway.

Hooray for W5YI for picking up where the FCC left off. I think that
if you *had* forgotten, and would have lapsed, you may just morally
owe him the $6.00.

James Maxwell wrote:

(SNIP!)

James, I think that you are still missing the point.

You speak as though QST serving as a forum is some new idea, and that that is not its current function. I think that that is news to most of us. I speak as one who has been a paid-up League member for the last 7 years, and a member on and off for the last 30.

QST has plenty of space to present the **League's** position on issues. And it does. K1ZZ does not lack for a forum. But since QST purports to be a membership-owned publication, and not a private entity serving only a few owners or managers, I would argue that the League has a DUTY to present arguments and discuss them, prior to the League's taking a position on something.

By the way, a mere lack of understanding of the League's poorly-understood and little-cared-about organizational structure is NOT why most hams don't utilize it. Most hams don't utilize it because they do not feel that these guys are their representatives. They see QST and its lack of candor and openness, and assume, perhaps correctly alas, that any suggestions the average ham has that runs contrary to K1ZZ will be disregarded. Your dismissal of many of the discussions here on the internet as being unconstructive is symptomatic of this.

QST and the League will not achieve legitimacy until they do more than simply march in lockstep with K1ZZ. By the way, when was the last time he stood for election, and who ran against him, if anyone? Is his job lifetime tenure?

What are your positions on 1) contesting; 2) the CW requirement and keeping it? These are two issues that are often discussed whereever there are amateurs, except, of course, in QST.

James, forgive me, but I am dumbstruck. Let me get this straight.
You refuse to discuss your views on this forum on a couple of pretty
straightforward issues. You are OK with criticizing those of us who do,
as you did in your last couple of posts, but you won't tell us where
you stand. I'm supposed to get a plane ticket and fly to the Pacific
Division, wherever that is. (I'm sitting in my shack looking out at
the Pacific Ocean, does that help? Forgive the sarcasm.)

I would say, offhand, that Jim is afraid to speak his mind on any
substantive issues, because he fears that it would create political
problems for him back in Newington. If there is anything more symptomatic
than this of what is wrong with the League, I'm hard pressed to think
of it.

Incidentally, Jim, before you get off criticizing me, I vote in my
League elections, and I have published both an article and a number of
letters in QST. So don't get off saying **I** haven't done anything
about this situation. It is **you** who are failing to be
straightforward.

>73. Jim, W6CF

Jim is exactly correct. Nothing will happen if you don't *act*.
Flaming on the net has very little effect, especially when the
flame is unwarranted or misdirected. I would urge people who
strongly disagree with ARRL policy to do three things.

1) Join the ARRL. You won't make a difference on the outside.
Others have tried that, but the chance of successfully forming
a second viable national amateur political organization is
essentially nil. (And even if it were possible, it would dilute

amateur strength, and that's not good at a time when amateur
radio faces severe threats from the outside.)

2) Learn how the ARRL *really* operates. Most of the people flaming
the ARRL here on the net don't really understand how the League
works. (Or how any political organization works for that matter.)
Make no mistake, the ARRL is primarily a political organization.
It isn't a technical society, it isn't a contesting society, and
it isn't a Dxer society. Nor is it primarily a publishing business,
though that is its most visible face. It is at heart a political
creature. Its other functions are ancillary to that reality.

3) Use your knowledge of the levers of political power to *change* the
way the ARRL operates to something more to your liking. This is not
an impossible task. But it is also not a quick or easy task. However,
it is the *only* way you can realistically hope to reshape policy.
There is an example of how to do that which may be familiar to many
of you, and that's the way the NRA was redirected by a perfectly
legal and proper coup by an organized group of concerned members.
Or reaching back a bit, how the Republican Party was reshaped by
the Goldwater Republicans to become the nucleus of the Reagan
Revolution.

The only path to change is through hard work and grassroots organiztion.
It doesn't take huge numbers to affect change, but those involved must
be a determined and organized cadre who are willing to work unstintingly
toward their goals. Most of that work isn't very glamorous, much of it
is downright tedious, but it is the way changes are made.

>effort, it does NOT represent me.

Point of order, albeit a very small one: An organization that makes "lobbying" one of its primary purposes is in grave danger of losing its non-profit status with the IRS. I've been in those shoes with another national non-profit (albeit a small one). The original articles of incorporation, written in 1957, prohibited lobbying altogether. The early 1970's revision allows it, but only on a strictly limited basis, on advice of counsel.

Maybe ARRL isn't too effective now...I've not followed things too closely for a while...but if they lost non-profit status, operating costs for what services there *are* would go a whole lot higher!

Can't learn the code either, huh?
Just 'cuz you want it doesn't mean you're going to get it.
This diatribe sounds like a typical '90s welfare mentality.
I doubt engineers in college want or need poetry, but they damn
well have to study it.

Make a real effort to learn and put yourself above much of the crowd.
NOT because code is eliteist, but because you were willing to try.

Nobody is ramming ham radio down your throat.

Period.

It's TOTALLY voluntary. For people that don't want to
make the commitment, there is still:

E-mail
Web surfing
GMRS
Family radio
Citizen's band
THE TELEPHONE

Ham radio: hands-on communications with many purposes.

Licensing requirements: strict. I don't see anyone
handing out engineering degrees for free either.

Morse Code: an effective, easy-to-code-and-decode-without-
hardware, means of getting a message through.

6 meters: A band that is 4 MHz wide, containing MORE
spectrum than ALL of the amateur HF allocations
combined, yet goes almost completely unsed by the
no-code (and other) licensees who are completely
able to use it.

Basically, regarding HF access without CW...

6m opens to Europe from the East Coast, and often.
There's not much activity on this immense band!
Many people find CW to be useful for operating,
even those who DIDN'T take a CW exam...
CW as requirement for HF? It's a MOOT POINT, my friends.
I'll continue to use it even after they don't
require it anymore.

If you check with the ARRL you will find that they are currently
involved in two surveys, one to their members, and the second to non
members. Give the League a call for details regarding criteria.

All that needs to happen is the first major crash of a large number of
Internet routers or nodes, so that the fun and free access gets cramped, or
maybe the major universities and businesses who allow the net to transit their
mainframes start charging some big bucks for all the play toy affectionadoes
on the net. Your radio will still work when the phone systems crash, or when
the net starts getting expensive. Just sit a while, it'll be back.

2686. Re: W5YI at it again!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-06 00:00:00 UTC
From: Dave Burr <dtburr@mcs.com>
Message-ID: <32A8640A.44E1@mcs.com>
Source record: 211056

What a silly, non-thought-out, response! The W5YI thing is nothing more than a solicitation to provide a service. There is nothing at all wrong with it. They will price it at a point that the market will bear(read:people are willing to pay), and given their costs. Worst case, you get a reminder that your license is about to expire....for free. Maybe you'll even avail yourself of the service. That's your decision, regardless of the asking price.

I think that what the original poster was worried about is that some of the more ignorant among us will not know how to renew their licenses any other way and be "forced" to pay the $6.00. That kind of paternalistic attitude is why business in the U.S. does not thrive and why nobody wants to take personal responsibility these days.

If you are that worried about it, YOU send out the reminder to all the hams whose licenses are expiring, along with a 610, and offer to process it for them. See how long it takes for you to figure out that such a "reminder" service takes resources.

Dave

2687. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-06 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <589o38$8jh@lyra.csx.cam.ac.uk>
Source record: 211057
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to over a
thousand lines I here post a brief sample.

Following discussions last year the full collection is not
now posted to alt.usage.english (but see below for how to
obtain a copy by FTP).

Brian Kelk bck1@cl.cam.ac.uk
6 December 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet (used by emergency services):

Anton Berta C"asar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle

Richard Samuel Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

"Arger Charlotte "Okonom Schule "Ubermut

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

The main posting is also available at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>
<ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/phonetic-alph/full>
<ftp://ftp.cs.ruu.nl/pub/NEWS.ANSWERS/radio/phonetic-alph/full>

[The most recent version is that of 15th November; at the
moment ftp sites are not up to date]

>array of opinions, which are hotly debated. QST systematically excludes such
>debate from its pages, and reading it, one would think that all hams are
>marching happily in lockstep behind the League. Not true.

I would strongly agree with this. QST is the house organ, and the only
tune it knows is the party line. The pravda that it speaks departs so
far from the ordinary amateur's daily reality that it is viewed as
untrustworthy. It *should* hew more closely to the realities of the
amateur community, and should provide a greater diversity of voices.
OTOH, it *is* the house organ, so it is not likely to expose skeletons
in the closet, detail backroom machinations among League politicians,
or become a forum for dissenting views. That is the role of an independent
press.

>You are wrong to belittle the internet as a forum for hams to express themselves
>on ham issues. It wouldn't be nearly as necessary if QST didn't deny
>others a forum. What other forum do we have.

A good question. But usenet is such a home of flamebaiters that the
signal to noise ratio becomes such that the message is often lost.
There is an opportunity for the web to become a source of independent
press, however. We have webzines like Ham Radio Online, and we have
the electronic version of Newsline, which could serve as independent
conduits for information and opinion about amateur radio, the inner
workings of the ARRL, and the relationships those things have to the
larger reality of the changing face of electronic communications.

If only one change could be wrought in the ARRL, it should be a greater
openness and accessability of the organization to the independent press.
Much of what goes on behind closed doors at the ARRL is not reported in
QST, or is so sanitized as to grossly distort reality, and is closed to
the independent amateur press. League employees must clear even their
Email with their bosses, so little hard and verifiable information is

available to the independent press unless it has been sanitized by Sumner and company. Thus rank and file amateurs have no trustworthy source of information about the goings on at HQ.

>Most hams have no understanding, and no interest, in the League's poorly-
>understood field organization. This is the League's fault. By excluding
>dissent, it has sent a clear message that it doesn't want to hear, or to deal
>with, opinions other than those of K1ZZ.

The fact that most amateurs don't understand the League political structure is more the fault of those amateurs than it is of the League or K1ZZ. To affect change, one *must* become familiar with the realpolitick of the organization. That isn't going to be spoon fed to the masses. You have to get in there and get your hands dirty and find out how it really works yourself. The field organization is a powerful political tool for this. It can be made to cut upward as easily as it is used to cut downward. Since the League refuses to open itself to the independent press, we need to have moles burrow deep into the machinery of the League and become Deep Throat sources who *will* make known the machinations going on behind the scenes to enterprising reporters from the independent amateur press.

>By the way, when the hell does his term end? It seems like lifetime tenure.
>Is it?

He serves at the pleasure of the Board of Directors. Because he is a brilliant political tactician, he has used the levers of power at his disposal to dominate the board in subtle (and not so subtle) ways. So his position is rather secure as long as he doesn't put a foot too far wrong. If he were to really clash openly with a majority of the BOD, however, he could be gone tommorrow.

(Note that I don't mean to imply that Sumner is a dark Michiavellian power behind the throne. He is just a CEO who pulls all the strings at his disposal to maintain his position and influence. This is ordinary corporate America behavior. Nor would I say that all the things that he is working toward and expousing are bad. In fact, many of the things he does are quite praiseworthy. It is just the veil of secrecy under which he (and ARRL management in general) operates that makes many of these things appear suspect.)

If the ARRL BOD really wants our trust, they should allow independent reporters access to the BOD meetings, and supply full transcripts of those meetings to the membership rather than the sanitized minutes presently published. Individual members of the BOD should take a page of QST from time to time to discuss the rationale for the directions in which they are pushing the League (and amateur radio). And committee members should have the same opportunity. Much of the real work of the League happens in appointed committees, and the rank and file are offered only a sanitized version of what happens there, if they are told anything at all. The decisionmakers should not leave opinion strictly to David Sumner. Frankly, the average ARRL member has very little idea how the individual

directors or committee members stand on various issues of importance to amateur radio. That's not good.

From: thompson@atl.mindspring.com
Message-ID: <589oug$hq9@camel1.mindspring.com>
Source record: 211059

Who is this PFF who want to abolish the FCC? Any Why have the blocked feedback at mail@pff.org? Do the fear feedback from hams that upset their little apple cart (Another Little LEO with much wider impact on amateur radio?

And who is hozin@msn.com who would support this effort?

Dave K4JRB

2690. Re: 3,894.50 Khz, What is going on?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-06 00:00:00 UTC
From: Dave Burr <dtburr@mcs.com>
Message-ID: <32A8688A.778C@mcs.com>
Source record: 211060

Dear "Peter and Colleen":

You do not need to "hunt" for these guys. If you think that, you have not listened enough to really understand what's going on there. Maybe you should. All of the participants are well-known, we all know what their calls are, where they live, etc.

A couple of them HAVE been fined by the FCC in the past. It is likey to happen again, but it will take a while.

There is a group of people who hang out on the freq every night, and a roving band of antagonists who drop in virtually every night to make some trouble. While it sounds like a war, everyone enjoys it. Otherwise, they would stop. In observing this for a long time, (and being slightly amused by it, despite the fact that I would never want a potential ham to hear it), I can tell you that:

1) outside of *perhaps* one person (K4OKA), the group that normally occupies the frq. does NOT use profanity any more than the rest of the ham population. The same person does intentionally QRM the "antagonists" when they are on 3894.5 or other freqs.

2) the antagonists, led by WB2OTK and W4NTI, are extremely nasty and will say just about anything, so keep your kids away from the radio. This same group routinely jams the frequency with recordings. WB2OTK uses the digital recorder on his '850 to repeatedly play very nasty messages.

I believe that WB2OTK has an outstanding Notice of Apparent Liability from the FCC with a proposed $10,500 fine. K4OKA has been fined before and has toned it down some.

If it were not for K4OKA, WB2OTK, and W4NTI, you may hear a bunch of crazy stuff (which is okay), but rarely would you hear any truly disgusting dialog, unless you are a puritanical little weenie, intent on stifling any free communication. I know that there are *plenty* of those in our ranks. They are just as bad.

Jeff seems to have forgotten that there will also be members of the ARRL who are not operators.

While it may seem silly that people would remain in the ARRL while they are not active, there is some basis for this point of view. In Australia where there is a yearly fee for an Amateur Licence, a recent jump in the licence fee from $A34 to $A50 caused a significant drop in the number of amateurs. The general view is that the decrease in numbers was caused by inactive amateurs dropping their licence - about 9% BTW.

I imagine membership to the ARRL may have the same nostalgic value.

Regards,
Mark.

In <32a74f39.10650094@nntp.ix.netcom.com>, n4jvp@ix.netcom.com (A.G. von Luternow) writes:
>
>1 - scrap the current general class theory exam and replace it with
>the advanced class theory. Replace the current advanced class exam
>with a more difficult exam. As it stands now I think both the general
>and advanced class exams are too easy. (I am studying for the
>advanced)

I have no problem with making the tests more meaningful ... the theory exams ARE too easy. I fail to see why we need to maintain such a class hierarchy, however ... "incentive" (to copy CW faster) licensing was the worst thing to ever happen to ham radio ...

>2 - the no-code HF ticket would not be entry level. A minimum of one
>years operation holding a lesser class license would be a requirement
>whether it be a novice, a no-code tech or a tech plus.

This is unreasonable and unnecessary ... its sole intent is to be restrictive, regardless of the demonstrated level of knowledge of the applicant ... that is BAD public policy ...

>3 - the current HF band plan be modified such that each of the
>advanced class phone segments shall be expanded by 25 kHz.

WHY?

>If the
>segments of the bands currently reserved for CW, RTTY and digital
>modes are to be reduced and those portions of the spectrum are to be
>added to the phone segments, the extra, advanced and general (no-code)
>segments would increase in size by 50/30/20% respectively.

Nobody has proposed reducing the digital (CW/RTTY/PACKET/etc.) segments, not increasing the phone (SSB) segments ... I imagine that, with desirable rules changes, there will be digital systems carrying a mix of voice and data traffic operating where digital systems are permitted (the entire band) ... SSB would continue to be restricted to the (current) "phone" bands ...

>If 100 kHz
>of a CW segment is to be change to phone, then the extra class
>sub-band would get 50 more kHz etc.

Again ... nobody has proposed changing "CW" spectrum to "phone" spectrum ... and even if they did, that would not justify an automatic increase in the extra class sub-band ... this sounds like someone is

trying to "pull a fast one" on everyone else ...

>4 - current general class ticket holders will not be grand-fathered
>into advanced class licenses.

There is no need for so damned many classes of license ... all it does
is stroke the egos of those who need to feel that they are "better than"
someone else ...

>5 - no licensee will be grandfathered into a no-code HF license

See above ...

>6 - the novice class license returns to a non-renewable state

See above ... BUT, making a beginner's license non-renewable is a BAD
idea ... and serves NO useful purpose ...

>7 - the no-code tech exam will be increased in difficulty but will not
>be the same as the new no-code general class exam.

See above regarding class heirarchy madness ...

>8 - the tech plus exam will be the same as no-code tech exam with the
>addition of the 5 wpm test

See above ...

>9 - the licensing authority (FCC) will take a more active role in
>maintaining proper conduct on the bands either through general
>monitoring or else following up on complaints filed with the FCC by
>OOs. (Does the ARRL still have the Official Observer program?)
>Some sort of valid policing needs to be done now!

Dream on ... with budget and staff cutbacks, we're "on our own" to a
large degree ... we need to lobby the FCC/Congress for rules that give
us some ability to more effectively "self-enforce" ...

>
>novice ticket - 5 wpm, current novice exam, non-renewable, good for 1
>or 2 years, no change in spectrum or modes
>no-code tech - 0 wpm, current general exam w/slight increase of
>difficulty, no change in spectrum or modes
>tech-plus - 5 wpm, current general exam w/slight increase of
>difficulty, combination of novice and no-tech privileges
>general - 0 wpm, current advanced class license exam, all legal modes,
>spectrum allocation as modified by #3 above, not entry level
>advanced - 13 wpm, difficulty of current exam increased, all legal
>modes, spectrum allocation as modified by #3 above
>extra - no changes from current status

Too damned many classes ... two is PLENTY ... both "no-code" ... like
"apprentice" and "journeyman" ... the former has less privs (spectrum
and tx power output) and may need "time in grade" + test +
"recommmendation" from some number of full licensees to progress (just

an idea)

>It is obvious that some compromise needs to be made on the issue.

Why? I am not prepared to settle for some half-assed "compromise" that attempts to half-please everyone ... I want things to be sensible, fair, and progressive ... I'm not willing to settle for stupid, uniformly unfair, and restrictive ...

>This
>is my proposal. Before the current generals start raising can about
>losing 125 kHz of spectrum, please consider that there will be plenty
>of time to upgrade before a plan like this goes into effect. Also the
>international regulations would first need to be modified to permit a
>no-code HF ticket.

I *don't* like more aspects of your proposal than I *do* like ... in trying to pander a bit to some of everyone's biases, you seem to me to have selected something approximating the worst of all of them ... I'm not trying to be nasty and I'm not saying "you're stupid" or aiming any personal insult at YOU ... I just don't like your idea, that's all.

>
>You scold those of us who beep as not knowing how our radios work,

I never said "people who build their equipment don't know how it works if it only operates CW" ... I said "too many people only want to yack and beep and know nothing about how their radios work (and don't care)" .. there's a BIG difference between those statements ...

>but
>you've never answered my question from long ago: What radios are you
>using on the air that you've actually built?

I told you before, I lived for 5 years on a sailboat ... all of the gear was built-in ... I sold the boat and now live in an appartment ... I moved in May and have been VERY busy with a new job since then ... I am not *currently* operating *any* home-built gear 'cause I haven't had a chance to build any yet ... as opposed to not knowing how, caring to, or being willing to ...

>All my transmitters are home built.

BFD if all they do is go "beep" ... there is nothing very advanced in that ... if all they do is go "beep" I am not the least bit impressed.

> >>Morse code, however is a 150+ year old mode ... older, in fact, than
>>radio ... it no longer holds its position as the ONLY way for hams to
>
>Yes, and vocal communication goes back millions of years. Yet you still
>own a mic, yes? And how old is the telephone? Still using that old thing?

Voice is a "natural" (native) form of communications for humans ... OOK Morse is *not* ... it's not fair to make the comparison that you attempt ... besides, voice is FAR more efficient than OOK Morse ...

>The time-tested methods will always stay with us.
>

Nobody has said "you guys have to stop beeping" ... all we've said is "beeping is antiquated and *we* don't want to do it ... we want to do more modern things ..."

I honestly believe you beepers are simply afraid that nobody else will learn to beep, the other beepers will die off, and you'll be the *last* beeper left alive and have nobody to beep with ... is *that* it?

>There's a proposal aboard for us to be given more new
>HF frequencies, too. Now what were you saying about code hindering

>our future?

I think that getting any significant gains at HF are "pie in the skie"
.. there may be a few scraps to be gathered up, but substantial,
meaningful gains are unlikely, IMHO ...

And YES code continues to hinder our future ... and will as long as it's
mandatory ...

Negatory... First you get a 50 ohm non-reactive load and HEAT SINK it
to handle 100 watts!

I used to work in a lab where we made 50 ohm dummy loads about the
size of a pencil eraser. They would handle as much power as you could
safely and properly dissipate through sinking.

Is the station going to be operated in a public place like a mall or something? Maybe the leadership is concerned about the PR aspects of portraying ham radio as a user of backward technology (a bunch of beepers) to the public ... maybe the leadership wants to "put our best foot forward" by fielding a modern station using more modern, "user-friendly" technologies so that the public will be impressed, rather than snickering at "the old fools that still use such backward techniques." THAT's THE WAY MOST PEOPLE IN TODAY'S WORLD VIEW CW AND THOSE WHO CLING TO IT!!!

Think about it ... at least half (probably far more)the people in the mall are carrying pagers, cellphones, etc. ... they're technologically astute enough to recognize that CW is antiquated ... and the *hams* are *supposed* to be the "radio wizards" ... THIS DOES *NOT* COMPUTE ...

Two observations:

This freq sounds like an urban CB channel with drunk participants

Based on what I've heard on 3894.5, if the FCC eliminates the ham bands
and
sells them off, I wouldn't blame them. A tape of 3894.5 vs. billions of $
??
A no-brainer!!! Go for the money!!!

are not bootleggers. They give their calls and announce they are jamming; hence there is no need to find them. Several of them have been fined in the past but the FCC has either reduced the amounts or failed to collect. I know this doesn't sound helpful but I have no idea how to force enforcement.

>are about two dozen stations currently under the STA but more can be
>added. Dewayne is also the area coordinator in California so if you
>really want to get involved with this new technology contact him.

I probably will join one of the STAs ... however, CDMA at VHF/UHF is NOT
the same technology as would be used at HF ... the channel conditions
and other factors would likely lead to the use of rather different
technical approaches ...

>This is a 50 mHz and up STA and obviously these stations are all
>experimental. Dropping the HF code requirement in anticipation of HF
>spread spectrum communications is a little bit premature at this date.
>

I never said "drop the HF code requirment in anticipation of HF spread
spectrum" ... I said "drop the code requirement because it's outdated
and can no longer be justified" ... I also said "modernize the rules to
eliminate unneeded barriers to the experimentation with and
implementation of new technologies *throughout* the ham bands ...

>Again what technical rules need to be modified and what other outdated
>barriers do you see?

I've cited bandwidth restrictions that are outdated, restrictions on
modulation and coding schemes, restrictions on the use of certain forms
of encryption technologies (NOT wholesale encryption of message traffic,
but the use of secure digital signatures, encrypted system control
codes, etc.) ... there are many areas where the rules desperately need
modernization ...

>>
>So the beginner gets all modes but a reduced slice of the amateur
>spectrum. That sounds a lot like two current license classes, tech and
>tech plus. Please remember that under the current standards a no-code
>tech has more modes to use, more spectrum to use and the option to use
>more power than a 5 wpm novice.

I was thinking more like current general and extra privs ... with
appropriate level written tests ... and before someone tells me "the

test will be too hard for my 6-year old to pass" ... tough ... there is, IMHO, no need for the test to be lowered to the LCD (least common denominator) where small children can pass ... 6-year olds cannot get driver's licenses, neither should they (necessarily) be able to get ham licenses ...

>How long did it take you to prepare that wetware modem until you were >able to design the easy-to-use hardware modem, six days, weeks, months >years? How long did it take you to prepare that wetware modem until >you were able to pass that 5 wpm code test, six days, weeks, months >years? Which took longer? From when I started it took me seven years >to pass the 5 wpm test but I bitched and moaned for six and a half of >those years about the code. It took me three years to write my first >working TNC app from start to finish with no class room instruction or >outside tutoring while I was working FT in another industry. Six >months versus three years, whats your ratio?

if I couldn't write the code for something a hell of a lot more complicated than a TNC, I'd be out of a job ... 5wpm took me about a 6 weeks ... at one point, I could copy nearly 20 wpm, then I was in a life situation where an HF station was out of the question for an extended period of time and by the time I got back to having a station I had lost speed (and interest in CW/willingness to self-torture) to the point where I settled for staying at Tech(plus) ...

>Are you saying that 50 years ago the commercial interests started >abandoning CW while the amateur community still hasn't? If so that >means that the amateur community has not been leading the way since >before you (1950) and I (1953) were born. I guess the hobby has been >stagnant for a long, long time...

That's true ... ham radio HAS been stagnating and falling further and further behind for many, many years ... that's a sad fact, but it *IS* a fact and ignoring it doesn't change it or make it "go away."

>So we are not glorified CBer's who beep now but if a no-code HF ticket >doesn't happen we will be? How can we compete? The 24 or so stations >currently operating under the spread spectrum STA total funding is >likely a lot less than your company's R&D budget for one year.

That does *NOT* mean they cannot accomplish significant work and advance the art ...

>Now include all similar corporations in this country, total the R&D >budgets and divide by the number of licensed hams according to the >FCC. How many dollars per year does it break down to per ham? I don't >know how how many hams the FCC says are in this country but it would >not suprise me if the dollars per ham per year number is five figures >to the left of the decimal point.

Hams are not being paid a salary (the companies have to pay salaries) .. the 24 hams currently on the STA would cost a company a MINIMUM of 2.4 MILLION in salaries and minimal benefits alone ... not to mention

the cost of workplace, parts, test equipment, support staff,
overhead, etc. that the company would have to fund ... that could EASILY
more than double that ... that's equivalent to a company-funded effort
on the order of $5MILLION or so ... and society gets it "for free" ...
in exchange for the allocation of our bands ...

>>
>>I would submit that if you *really* can't readily envision how a
>>varactor could be added to your oscillator circuit to produce an FSK
>>signal, that you really should be recalled by the FCC for retesting ...
>>

>Yes I really I can envision how a varactor diode can be added for FSK
>(I do appreciate the asterisks around really) but I am willing to
>take a re-test without any qualms. I can still pass the general class
>theory and the 13 wpm test to retain my ticket.

OK ... I'll take you word for it for now <grin> ... but seriously ...
please STOP insisting that everyone focus on "simple" ... hell, I work
with DSP chips with over a million transistors (just in the onboard RAM,
not counting the MAC, ALU, peripherals, etc.) and other devices with
tens of thousands of gates in them ... complexity is NOT "the enemy" ...
lack of imagination *is* the enemy ...

If you enjoy beeping with a 1-transistor TX and a simple RX, fine ...
just don't insist that that's the "best and only way for everyone" ...
some of us accept the fact that we can do *really* neat things with more
complex systems and don't fear the complexity ... to us "simple things
that do very little" ar BORING ... reliability is also NOT an issue ...
modern devices are EXTREMELY reliable ...

>
>If the FCC re-tested all hams who had renewed their tickets twice

>could do the same?

Wow ... they might have to read a bit, study a bit, learn a bit ...
expand their minds ... practice some of the "self-education" that the
FCC envisioned as a part of our purpose when they established the ARS
.. would that be so bad???

> >A re-test of that manner would eliminate all the deceased hams still
>listed and probably a high percentage of the non-active ones as well.
>Then we would have a much better idea of the number of active hams in

>this country. Code or no-code, our slice of the spectrum would really
>come under scrutiny by the powers that be.

Don't be naieve ... our spectrum is and will continue to be under
scrutiny by every Tom, Dick, and Harry in, or wanting to be in, the
telecommunications industry ... they will make sure the FCC is aware of
our use, lack of use, or piss-poor use of our spectrum ...

>>>I and many others are open minded about dropping the code requirement
>>>but to be convinced (speaking for myself) I need better reasons than
>>>have been given thus far. "I can't do it. It's too hard. It's
>>>outdated." just doesn't cut it. If someone is unwilling to devote the
>>>time and effort, is their non-presence a detriment?

There is a big difference between being willing to waste months of one's
evenings learning and becoming proficient in an antiquated mode that has
NO redeming attributes (to the hazing victim) and jumping right in in
familiar territory to design, build, and experiment with intersting
"gizmos" that we all could use and benefit from ...

>>So what? I am NOT "hung up" on something that "can be wipped up from

>Reading that post really makes me very leery of the no-code proposal.

ONE guy ... and I suspect that the concern is that a special event
station in a public place with a bunch of "beepers" would only promote
the public image of ham radio as a bunch of geezers using backward
technology ... a large percentage of the people in the mall, or
whereever, will be carrying pagers, cellphones, etc. and are technically
astute enough to think "how backward ... and these guys are *supposed*
to be the "radio wizards"???

>BTW where did Drew disappear to?

I have no idea ... nobody told me it was "my day to watch him." (and
I've never had reason/occasion to keep in touch with him ...

I don't know but I have yet to see anyone else make any sort of proposal that attempts to resolve the on-going feud. I would most certainly like to see any proposal that you or anyone else might have that attempts to bring both sides to a common ground that is not a battlefield.

rogerjb@pop03ca.us.ibm.net wrote:
<snip>

: Although I agree with what you say to some extent, James, I think you are
: ignoring some very important points.

: Firstly, QST ignores alternative points of view in a systematic way. When you
: read QST, you would never know that ham radio has a lively dialog and lots of
: healthy disagreements and intelligently thought-out points of view. QST
: glosses over points of view that are opposed to the ones promulgated by
: the League.

I appreciate the comments from Roger. I know my answers won't be
satisfactory to some, but here's a try.

I disagree with some of the language of the above comment, but have no
argument with its intent, which I take to be a suggestion that the League
should admit that there's controversy out here and that a better job can
be done of reporting it as well as the various points of view that
exist. I agree. What sometimes isn't considered (at least I haven't
seen it considered recently), however, is that the League is a membership
organization with a wide range of interests. Some members are interested in
the technical side, others have wide ranging interests covering the
future of Amateur Radio, as do many of the members reading this, while
still others don't care much about anything other than their evening rag chew.
Somehow the needs and interests of *all* the members, not just a portion of
them, have to be accomodated. As a result, a compromise is reached and it
seems that nobody is completely satisfied. Suppose QST were to suddenly
(or gradually) to be more of a forum. (That would be an interesting
experiment!) Where is the money going to come from to pay for the extra
pages? Or, what is going to be left out of QST in order to make room?
I don't have the answers, but make these comments only to point out that
what seems so obviously a good thing to many of you (and to me too, in
some respects) has problems that would have to be addressed, and these
kinds of problems have not been addressed in these League discussions
here, at least so far as I know. If they have been discussed and I've
missed them, I'd be delighted to be educated.

What can be done about it, short of major changes in QST? One thing that
can be done is to continue to post constructive criticism here and
elsewhere, with emphasis on the word "constructive." I often forward
posts from .misc and .policy to people connected with the League who have
the ability to make change, and postings here *are* heard and sometimes
do have an effect. But if you want change, and the changes don't come,
(and I'm speaking here with a generic "you," not to Roger personally),
then DO SOMETHING ABOUT IT. Don't just throw the switch and walk away,

GET INVOLVED.

I'm going to change the subject here for a moment and cover a point that I forgot to put in my posting yesterday evening in reply to "Greg." (I don't know who he is, except by his first name.) I did not mean and do not mean to imply that every posting on the subject of the ARRL, or every posting here on .misc consists solely of vague complaints and unsubstantiated rumors and innuendo, and if anyone took my comments in that way and took offense, I sincerely apologize. *Of course* there's a lot of good, meaty discussion here - if there weren't I wouldn't follow this newsgroup and .policy as closely as I do. Some of it, in my book, is *really* good. There are some who post here who I always read, and in fact search for their names to see if they've posted anything new. Some posters put out stuff that have sharp, well-reasoned arguments, new points of view or new ways of looking at old things, comments that suggest that they've very knowledgable and have done a thorough job of researching and thinking through the subject. (I won't embarrass anyone by mentioning names - besides, with some of the private comments I've received from a few of you, if I were to say something nice about someone, it might wind up being the kiss of death for the poor fellow.)

But here's an example of the kind of posting that I *do* call a vague complaint. Suppose a post states simply that "QST sometimes contains articles that are technically incorrect, nothing more than junk." No, that's not a direct quote of anyone, but I've seen similar comments here. Now, I ask you, what in the world can an editor do with a statement like that? Can any kind of action be taken based on that kind of comment? Can the editor of QST review the article the complaint is about, then take action on his review? Nope. A general comment such as the above isn't at all helpful.

Of course, one way to handle it would be to write to the poster and ask for details. Last year I did just that: I sent follow-up, personal e-mail to about a half dozen such posters. I received one flame (telling me that I weren't so ignorant I would *know* what he was talking about) and was ignored by all the rest.

Of course, it's harder to be specific than to be general, but who ever said that making a difference was going to be easy?

Back to Roger's comments.

:Secondly, most hams are only faintly aware of the League's bizarre
:organizational structure, and have no idea who or what a section manager
:or a division manager is. They do not feel that these people represent them.
:This can be seen by the small numbers, typically a few thousand, that vote
:in any given ARRL divisional election. (Based on the recent elections).

I wouldn't call the League's organizational structure "bizarre," but that's a nit, and the point is well taken. Organizational structure is something that I cover from time to time at talks at club meetings and in personal correspondence, but the League can do better. I'll take a personal

look into the matter. Maybe some of you reading this have some suggestions too. Organizational matters to some is a subject that's dry as dirt. How can it be made more interesting? Meanwhile, if you have questions, you might check with your own Director, Vice Director, or Section Manager (listed either page 10 or page 12 of any recent issue of QST) and get a rundown. You can also check the ARRL web site or the ARRL info server.

: An organization like ARRL should encourage open discussion, and QST should
: serve as an open forum for such. It does not. Until it does, the internet,
: not QST or ARRL, will be the forum in which the average ham expresses
: himself.

I have no problem with the above. Keep in mind the comments I made several paragraphs earlier, however. QST is a membership journal. What percentage of QST should be devoted to wide-ranging discussions, and what percentage should be devoted to the more traditional topics? The "right" balance isn't easy to find, and pages in QST aren't cheap. What should be given up to free up those pages, and how do you propose to pacify those constituents whose favorite subject is cut to the bone or eliminated? I mention this only to point out that it's easy to suggest change, but implementing change can create a lot of unexpected problems. It may interest you to know that changes in the content of QST are discussed almost continuously back at HQ. Proposals for change are a dime a dozen. Workable solutions are golden.

So, like a bump in the record, I'm back to the old theme. Discuss, make suggestions, but help find solutions too! GET INVOLVED.

>restrictive, regardless of the demonstrated level of knowledge of the
>applicant ... that is BAD public policy ...
>
The sole intent is not to be restrictive. The intent is that the
holder of this class of license be exposed to to amateur radio
operating practices prior to being given full mode privileges on HF.
One years operation holding a lower class license is a demonstration
of knowledge concerning proper operating practices.
>>3 - the current HF band plan be modified such that each of the
>>advanced class phone segments shall be expanded by 25 kHz.
>
>WHY?
It is a compromise to satisfy those pro-code types who feel that there
should be incentives to learn and advance Morse skills. Perhaps this
isn't needed but none of this is set in stone, it's only an proposal.
>
>>If the
>>segments of the bands currently reserved for CW, RTTY and digital
>>modes are to be reduced and those portions of the spectrum are to be
>>added to the phone segments, the extra, advanced and general (no-code)
>>segments would increase in size by 50/30/20% respectively.

>See above ... BUT, making a beginner's license non-renewable is a BAD
>idea ... and serves NO useful purpose ...
>
The novice class license is an entry level class. After one/two
year(s) the novice can choose if he wants to remain an amateur or not.
If the novice wishes to remain an amateur there are three viable
options which allow that individual to continue as an amateur by
demonstrating increased technical knowledge without having to take
another code test, No-code tech, tech plus and no-code general.
>>7 - the no-code tech exam will be increased in difficulty but will not

>>OOs. (Does the ARRL still have the Official Observer program?)
>>Some sort of valid policing needs to be done now!
>
>Dream on ... with budget and staff cutbacks, we're "on our own" to a
>large degree ... we need to lobby the FCC/Congress for rules that give

>us some ability to more effectively "self-enforce" ...
It's no dream. Perhaps we are on our own but we need some form of valid policing. Self-enforcement sounds good but who decides which hams become the "ham police"? I am afraid their are too many hams with personal vendettas against other hams or their own self-serving agendas for self-policing to work. ARRL OO's reporting repeated violations to the FCC would be feasible if the FCC would follow up. An amateur lobby would be a good idea to put pressure on Congress and the FCC to do something. Actually we have been own our own long before the cutbacks, the FCC has been basically toothless for many years when it comes to enforcing amateur radio rules and regulations.
>
>Too damned many classes ... two is PLENTY ... both "no-code" ... like

>and tx power output) and may need "time in grade" + test +
>"recommmendation" from some number of full licensees to progress (just
>an idea)
>
No additional classes have been added, the status quo has been maintained. Did you complain about too many classes when the most recent class was added, the no-code tech?
>
>>It is obvious that some compromise needs to be made on the issue.
>
>Why? I am not prepared to settle for some half-assed "compromise" that
>attempts to half-please everyone ... I want things to be sensible, fair,
>and progressive ... I'm not willing to settle for stupid, uniformly
>unfair, and restrictive ...
Sorry Carl but you are not going to be able to get it all. The last two sentences can easily be construed to mean you want it to be what you see as sensible, fair and progressive and you are unwilling to accept anyone else's values if they do not match your own. By refusing to make any compromises you invite members pro-code faction to do the same. Keep that attitude and nothing will change.
>
>I *don't* like more aspects of your proposal than I *do* like ... in
>trying to pander a bit to some of everyone's biases, you seem to me to
>have selected something approximating the worst of all of them ... I'm
>not trying to be nasty and I'm not saying "you're stupid" or aiming any
>personal insult at YOU ... I just don't like your idea, that's all.
>
Carl accusing me of "trying to pander" I do take as a personal insult! Pandering and attempting to resolve a dispute through a compromise are two totally different things. I strongly suggest that you consult a dictionary in the future before using words whose meaning you are not certain of.

The American Heritage Dictionary of the English Language, third edition copyright 1992 defines pander as:
1 - to act as a go-between or liaison in sexual intrigues; function as

a procurer
2 - to cater to the lower tastes and desires of others or exploit
their weaknesses

I feel that I have made a reasonable proposal in an attempt to resolve

the on-going dispute. I am certain that there are at least one or two
no-code advocates who can see using my proposal or a similar proposal
as a starting point. By refusing to accept anything less than what you
see as correct, you are attempting to impose your standards, beliefs
and ideas upon all with no respect for anyone else. This dictitorial
attitude is a disservice to all amateurs, both pro-code and no-code.

sorry no 73 from the accused panderer
de n4jvp

rogerjb@pop03ca.us.ibm.net wrote:
: In <jmaxwellE1x2qM.CpF@netcom.com>, jmaxwell@netcom.com (james a maxwell) writes:
: >
: >YES I understand that many of the League's constituents believe that the
: >ARRL is unresponsive, is organized to protect its own unresponsiveness,
: >and is designed to resist effective change.

: As a League member for many years, a few comments.

: I believe that the League's biggest flaw is its deliberate de-emphasis, and
: downright denial, of viewpoints other than those of K1ZZ and his crew.

: When reading QST, one would never know that ham radio contains a lively
: array of opinions, which are hotly debated. QST systematically excludes such
: debate from its pages, and reading it, one would think that all hams are
: marching happily in lockstep behind the League. Not true.

Roger, by coincidence I made some comments on the above topic in a posting
I shipped out only a few minutes ago. I hope its responsive to your comment
here.

: You are wrong to belittle the internet as a forum for hams to express themselves
: on ham issues. It wouldn't be nearly as necessary if QST didn't deny
: others a forum. What other forum do we have.

I didn't "belittle the internet as a forum for hams to express themselves..."
I did point out that posts in the "why I'm not an ARRL member" don't seem
to lead anywhere, and that I believe that there would be more progress is
there was more action. Some people misunderstood my intent too, and I'll
state again, as I did in an earlier post, that there is a great deal of
good, thoughtful information floating around out here on the net. And if
I didn't believe that, I wouldn't bother reading so much of it. But as I
also stated, in various ways, I believe that the posters would have a
better chance of achieving their goals if, in addition to posting, they
were to take some off-the-net action, action that goes beyond the stage
of complaining, and work toward achieving workable solutions.

: Most hams have no understanding, and no interest, in the League's poorly-
: understood field organization. This is the League's fault. By excluding
: dissent, it has sent a clear message that it doesn't want to hear, or to deal
: with, opinions other than those of K1ZZ.

Again, although I would quibble with your language, I believe you have a
point. See my earlier posting for a more detailed discussion.

: By the way, when the hell does his term end? It seems like lifetime tenure.
: Is it?

Dave Sumner is one of the brightest persons I have ever met, and he is one of the most knowledgable persons in the world with regard to the regulatory side of amateur radio. He is also a gentleman who responds well to constructive criticism. I have known him for perhaps 30 years, long before he became ARRL Executive Vice President, believe he makes mistakes from time to time and have told him so, have had disagreements with him from time to time over the years, but he's still a friend who I respect.

He's a paid employee of the League, and he and serves at the pleasure of the Board of Directors.

Hi Pete. Yes, it's been asked before. It's just some good ole' boys having some radio fun and excercising their rights to freedom of speech in Amerika. Others, not including the FCC, have tried to stop it and have failed. Years ago the FCC did issue a few speeding tickets for power over the limit, but that's about it. I can't hear it out here, but I remember when I was back on east coast it use to get pretty entertaining at times. One young fellow that I knew, a new ham of high moral character, decided that he would put an end to it back in the 70's. I believe he gave up after he started receiving death threats. Anyway, take a shot at it if you feel froggy. You may succeed where others have not. Tell Colleen we said HI.

: >Radio, whether that service is good, bad, or indifferent, whether I have
: >in fact acted on ideas that I have read here in .misc and in .policy, or
: >how much time I spend listening and how much time I spend talking.

: OK James, some questions:

: 1) A LOT of people lately, both on the net and on the air, have discussed
: the desireability of getting rid of the CW requirement, first thru WARC and
: then the FCC. Why almost no discussion of this in QST? One would never
: know it is a hot issue from reading "our" official journal. Even CQ has
: discussed this.

: 2) What are YOU PERSONALLY doing about the above issue? What is your
: position? What is K1ZZ's position? How can we feel that people like you
: represent us when we don't even know your positions on issues? Since
: QST systematically refuses to act as a forum for healthy, vital, debate, it
: is small wonder that many hams don't feel ARRL represents them.

: 3) Do you support, or not support, K1ZZ? What are his views and how
: do they square with yours? I read his editorials every month. They rarely
: deal with the issues that I hear hams talking about.

: 4) Example: contesting. Lots of hams think that contests fill up too much
: of the bands, and should be limited in some way. Other hams don't. I NEVER
: see this discussed in QST, although it is a frequent topic of discussion on the
: air. What is your position? What is K1ZZ's? Are we doing anything about this
: one way or the other, or do we care?

: If you don't let us know your positions on things, how can we know or care
: what you do? My Congressman wouldn't dare skirt issues like this, but you
: guys do it systematically. And yet you claim, essentially, to represent us
: per ham radio much the same way a Congressman does governmentally.

Roger, I'm not going to get into any sort of discussion such as the above in this forum. I am a Vice Director in the Pacific Division, not in the Southwestern Division or the Northwestern Division or the Dakota Division.

My views on many subjects related to amateur radio, including some of those you mention above, are well known to many hams in the Pacific Division, both ARRL members and non-members. I have spoken at every Pacific Division Convention in one capacity or another for many years, have participated in every ARRL Forum at the Pacific Division Convention since I was elected Vice Director in 1993, am available on the floor at every Pacific Division Convention, and appear and both speak and listen at dozens of club meetings every year in the Division.

I started posting on this thread because I believed (and still believe), in short, that many of those who post complaints and concerns here would be much more productive, and would provide a better service to amateur radio if they were to supplement their postings by using their very considerable talents to get out and WORK for what they believe in.

If you would like to discuss the above subject some more, if you would like to discuss ARRL activities some more, go to it.

If you want to know what personal stands I take on issues such as those you mention above, come to the Pacific Division and I'll be happy to talk with you.

For those who haven't figured it out, this is the same person who posted his Pager scam "available in all 51 states". As oyu can see, this message is completly off topic. It has nothing to do with amateur radio. But of course, being a paralegal, he will sue me in a class action suit because of me saying this, so I say this: If you want his spam to stop, forward his message, complete with the below headers to: postmaster@worldnet.att.net,abuse@worldnet.att.net,brads@ACCESS.DIGEX.NET,postmaster@dial-access.att.net,abuse@dial-access.att.net,postmaster@att.net,abuse@att.net and demand they take appropriate action against this person. Thank you.

carl@ais.net (Carl Stevenson) wrote:

>Hams are NOT corporate managers ... we can choose to experiment with the
>esoteric ideas at home

Possibly experimentation for self gratification. Experimentation
at home in the sense of doing something that has never been done
before is highly unlikely these days. Even for professional
researchers, the old joke about 99% of all research being the
"dragging of old bones from one graveyard to another" is
highly accurate. Advances in science aren't done by amateurs
at home anymore. Once the advances are made, then people like
you and me can apply them at home to do self-gratifying things (like
programming DSP chips).

>ONE guy ... and I suspect that the concern is that a special event
>station in a public place with a bunch of "beepers" would only promote
>the public image of ham radio as a bunch of geezers using backward
>technology ... a large percentage of the people in the mall, or
>whereever, will be carrying pagers, cellphones, etc. and are technically
>astute enough to think "how backward ... and these guys are *supposed*
>to be the "radio wizards"???

Bad analogy. Starting with landing on the moon and ending with the
Personal Communications Network (or is it System?) , most people are
quite ho hum about communications these days. On the other hand,
last time I decoded the Morse transmission for a friend as we were
watching some TV show, he thought I was an absolute genius :)

If you're trying to impress people at the mall, you'll find that
people are impressed more by things that virtually no one can
do, as opposed to things that everyone is doing.

I actually have to chuckle a little bit when I picture the image
of two Techs hanging around at a hamfest when a repeater
is keyed up: "Hey Joe,....do you know what that beeping means?"
"Heck if I know...".

2719. SbFFT1.2 SB16 spectrum & filtering - BETTER GRAPHICS SUPPORT

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-06 00:00:00 UTC
From: kevinm@eden.com
Message-ID: <58851d$1s5$5@boris.eden.com>
Source record: 211193

I have uploaded to Simtel.Net:

http://www.simtel.net/pub/simtelnet/msdos/hamradio/sbfft12.zip
ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/sbfft12.zip 1558410 bytes

sbfft12.zip Sound Blaster spectral display & filtering

Features:
* Sound Blaster 16 (or 100% compatible) input and output.
* Band widths of 2K, 4K, 8K or 16K Hz.
* Spectral resolutions of 1 Hz to 16 Hz per pixel.
* Display of power spectral density with any of 4 color maps in either
linear or logarithmic scale.
* Define and use up to six filters simultaneously -- band pass, band
stop, low pass, and high pass. Filters have 25 Hz skirts at 3 to 50
dB points.
* Filters are defined graphically by mouse movement based upon the
displayed spectrum. Once you see a signal, you can quickly define a
pass or stop filter around the signal by clicking and dragging the
mouse.
* Net filter passband is displayed at all times.
* Filters can be selectively enabled and disabled by a single keystroke
or mouse click.

Special requirements: DOS 3.0 or higher, SB16 or 100% compatible, SVGA,
VESA 640x480 & 1024x768, mouse, 486/66 or higher to display spectra,
Pentium 120 or higher to filter.

Changes: Differences from version 1.1:
* Compatible with many more graphics cards.
* Full screen mouse support with faster response at high resolutions.
* Mouse click to enable/disable and delete filters.
* Defaults are assumed for the Blaster environment variable.
* Support for PCX graphics files instead of TIFF.

Freeware. Uploaded by the author.

214 in all 51 states?? Wow. Now what about the FAKE amateurs?

>Thanks again and Happy Holidays to all 50 States.

But I thought you said.. umm. never mind.

>Michael Klein
>KB2TIU

Make up your mind. One other post you claimed KB2FCC.

>If you did not obtain service from me, because of comments you have read on
>this server, email me and let me know, you may be entitled to compensation
>resulting from a class action law suit.

I didn't buy service from you because of comments you made, like Get a pager that is less than free! and "Service available in all 51 states". other than that, and the fact you claim to be a paralegal yet think slander is a federal matter handled in federal court and can be a class action suit, I think you're one teriffic person. In case you don't know, you have to prove someone's comments are wrong to prove slander. I said you were a moron for your 'message' that we have 51 states. Prove me wrong. Since when is Slander class action? I'm no paralegal.. er.. lawyer, but doesn't class action usually involve when LOTS of people are ripped off by a company? Get a clue.
If you passed the state bar exam, well, read the books again. I am no lawyer, but...
It's too bad you were'nt on the defense for the Simpson trial. OJ would be frying right about now, and have been connected to the murder of General Custar and Abraham Lincoln.

>However, it unfortunately contains a defect right up front, a defect that
>is representative of one of the reasons I finally felt compelled to ship
>off the "motherhood" posting I did.

There you go again. It wasn't a pot-shot. It was a serious recommendation.
Too many people make suggestions to their ARRL reps, only to be told
what is wrong with what they are suggesting.

> His statement that I should "listen
>more, and talk less" completely ignores the fact that he has no idea
>whatever how I spend my time in service to the League

I was refering, *primae facia* to your posting, in which you took a
big, wide, roller, and painted a whole lot of dialogue in a fashion
which invalidated them.

> and to Amateur
>Radio, whether that service is good, bad, or indifferent, whether I have
>in fact acted on ideas that I have read here in .misc and in .policy, or
>how much time I spend listening and how much time I spend talking.

You're right. I only used the evidence of your posting, which sickened
me.

> He
>started off, in fact, with one of those gratuitous pot-shots I mentioned,
>and later even claimed that I denied that a problem exists!

Again, your posting seemed to indicate a marked insensitivity to
the credibility problem with which the League has saddled itself.

>YES I understand that many of the League's constituents believe that the
>ARRL is unresponsive, is organized to protect its own unresponsiveness,
>and is designed to resist effective change.

Yes, but do you believe that they have good reason for feeling
disenfranchised. You see, in the face of such an understanding you
can do one of two things: you can try to bring them around to your
way of thinking, and/or try to convince them that they are misinformed.

Or, you can admit that there is validity to their feelings and experiences and DO THINGS WHICH WILL LEAD THEM TO CHANGE THEIR MIND.

Now saying, essentially 'if you don't like it then give more time' isn't likely to bring them in. Especially when they've experienced rejection in the past. It feels an awful lot like you're trying to shift the blame onto them.

>But the suggestions I made in my "motherhood" posting still stand. If you
>have a complaint or a suggestion, by all means post away. I'll read it,
>others connected with the Board and at HQ will read it, and sometimes action
>will be taken.

Prove it. Give credit where credit is due. Show us in the minutes where it says 'as a result of a posting by WA6AAA on usenet, we are resolving to do the following:'

> But if you want to make a difference, a *real* difference,
>get involved yourself! If you're rebuffed - and I know that happens, -
>don't just sit at your keyboard and complain, GET INVOLVED AND DO SOMETHING
>ABOUT IT!

Jim, you know better. Politics being what they are chances are that if someone complains about their SCM to their Division Director that the Director will back his buddy (just like bosses back each other at work most of the time). In fact THAT'S EXACTLY WHAT THE DISENFRANCHISED ARE COMPLAINING ABOUT.

Greg

: [snips] and
: ->then - nothing. Nothing at all. A few months later someone resurrects
: ->the thred and the cycle starts again.
: ^^?^^
:
: Jim Maxwell --

: Your response is archtypical of the responses most of us get when we
: discuss controversial topics with "you-all" or write letters to our
: "representatives" in the ARRL. "Tut-tut, little whiner, we know what's
: best."

Jim, I don't doubt one bit that you've had such responses in the past.
However, you have NEVER had that kind of response from me.

: Go back to my original post. Answer the specifics point by point. Don't
: shine me on by saying that they are "vague" or "innuendo". I write for a
: living. I can do vague and innuendo when I mean to do it, and this ain't
: it. I spent 8 years in elected California politics, and my busslhit
: detector has been finely honed to the point where I can smell it in your
: first sentence.

I'm very sorry you set the stage for a discussion by a statement such as
that, Jim. Rudeness may intimidate people in California politics, but it
doesn't work with me.

As a matter of fact, your posting contained some good points, as well as
some vague ones. It was for that reason that I wrote a personal note to
you on Monday, in an attempt to get an exchange of views going. Of
course, you didn't reply.

: "ARRL supports CW licensing requirements and subbands". Boy, isn't THAT
: built on air?

Nope, not built on air at all. It's currently a correct statement.
Unfortunately it ignores the fact that the question of CW licensing
requirements is under active review - very active review - right now,
and the opinions of *all* US hams are being actively solicited. In
that sense, your statement above is true, but doesn't tell the entire
story. In my book it's therefore misleading.

In your original posting you also wrote that the League
has a "concentration on contesting and awards, and a VERY ineffective
lobbying effort." The League has made a deliberate effort in recent
years to reduce contest coverage in QST - and has been flamed as a result,
incidentally - and a group has been at work since earlier this year with
the charter, among other things, to bring the costs of the DXCC program
down. The League has a lot of work to do in the area of lobbying, although
for our size and resources, we are enormously effective, in
part because of tremendous help from both ARRL members and non-members.

: "QST articles are poorly edited and technically lacking." There's an
: ethereal for you.

You're right. That IS an ethereal. (It's not exactly what you put
in your first posting, but close enough.) As I mentioned in an earlier
posting this evening, neither I nor anyone else can do a blessed thing with
that kind of statement. Do you *really* believe that I can go to the editor
of QST and tell him that you, a ham in the Pacific Division, has stated
that "QST articles are poorly edited and technically lacking"? If you have
some constructive criticism, let's hear it. But generalities don't cut it.

: ... and the beat goes on, and the beat goes on...

: Go back, Maxwell, and READ the damn thing. Answer it if you can or will.

Yes, Jim. I've read it. It contains some good thoughts, as I discussed
above - enough good stuff to cause me to want to get in touch with you.
I'm still available.

>Nobody has said "you guys have to stop beeping" ... all we've said is
>"beeping is antiquated and *we* don't want to do it ... we want to do
>more modern things ..."

There is hardly anything modern about the concept of resonant
frequencies, discriminators, or balanced modulators, which are
all over the amateur theory tests. On the other hand when you
consider that digital modes are all the rage these days, it's
hard to consider the concept of a code, and more in particular,
the Morse code as being anything *but* fundamental to
understanding of digital communication and information theory.

Maybe in lieu of actually *copying* code, no-code licensees
should be required to understand the concept that the Morse
code seeks to maximize (though not always optimally)
the information rate in terms of bits per symbol. And that
outside of complicated decoding electronics with LEDs and
CRTs, it is the most efficient mode of communication in S/N limited
situations.

>Voice is a "natural" (native) form of communications for humans ... OOK
>Morse is *not* ... it's not fair to make the comparison that you
>attempt ... besides, voice is FAR more efficient than OOK Morse ...

Most hams on HF have experienced the common situation in which
a valid QSO with the needed country or multiplier is impossible on
SSB -- only to be finished off on CW where the S/N goes way up.
When you couple the S/N improvement of CW with the ear's
marvelous ability to adapt to and detect continuous tones in noise,
CW is a wonderful mode for getting the job done when nothing
else will. It is only obsolete in the sense that you, with your
SSB rig or AMTOR TNC box, would resign yourself to the
fact that communication just isn't possible that day, while
I would be communicating.

Saying CW is obsolete is like saying reading by candlelight
is obsolete. You have candles in the drawer in case the
power fails. I have a CW keyer in case the S/N is too low.
It's also fun (I also enjoy reading by oil lamp once in a while).

>And YES code continues to hinder our future ... and will as long as it's
>mandatory ...

I disagree. It's not keeping any more people away than it ever
has.

In article <jmaxwellE1yzGI.1nI@netcom.com> jmaxwell@netcom.com (james a maxwell) writes:
>seems that nobody is completely satisfied. Suppose QST were to suddenly
>(or gradually) to be more of a forum. (That would be an interesting
>experiment!) Where is the money going to come from to pay for the extra
>pages? Or, what is going to be left out of QST in order to make room?

<insert tongue firmly in cheek>

Oh. Okay. I understand now. It's just a question of space. It's not that
QST *wants* to be one-sided or to present the ARRL position as
as faites accomplis. It's just that there isn't *room* to provide all
sides of important questions. It's not bias, it's just space problems.

After all, it's *ever* so much more important to print the QTC of every
archaic CW net transmitting useless 'Greetings by amateur radio' -grams
in great circles than it is to present the case for elimination of the
CW requirement (where I personally agree with the ARRL stance, lest you
think I'm beating *that* drum). Show me an SCM with something more
interesting to say, and I'll show you a mighty rare bird.

Or how about publishing the National Contest Journal but *still*
loading the pages of QST down with every damn score in every log
sent in. Can you say 'boring?' Packet networks, the internet, and
the journal, but no, we have to foist these pages off on everyone.

Don't even get me started on the 'beginner' section. Can you say
redundant? Can you say 'done to death?' Can you say 'go out and
buy any Ham Radio 1-A book?' Can you say 'who the f*** would want
to build an antenna out of PVC pipe when there is copper, anyway?'

In short, Jim, and with all due respect, and to quote our friend
at RST, 'bullshit.' Space is not the problem. Lack of openness to
alternative view points IS. The fact that too many of those who
control the pages believe that their purpose is to tell their
constituents what to think IS.

Greg

>Southwestern Division or the Northwestern Division or the Dakota
>Division.

So let's get it straight. As a second-level official of the official
organization, you won't make your views public in a national forum.

Okay, fine.

>My views on many subjects related to amateur radio, including some of
>those you mention above, are well known to many hams in the Pacific
>Division, both ARRL members and non-members. I have spoken at every
>Pacific Division Convention in one capacity or another for many years,
>have participated in every ARRL Forum at the Pacific Division Convention
>since I was elected Vice Director in 1993, am available on the floor
>at every Pacific Division Convention, and appear and both speak and listen
>at dozens of club meetings every year in the Division.

Ah, so people have come to you to get an 'audience,' at a place
of your choosing.

And to think I once voted for you, when I lived in your Division.

Well, at least I admit my mistakes. Oops.

>If you want to know what personal stands I take on issues such as
>those you mention above, come to the Pacific Division and I'll be happy
>to talk with you.

Once again; you're an officer at the National level, second in line
to the National Board. If you aren't willing to respond to simple
questions on key issues, you have no business so-serving.

>battlefield.

Several proposals for no-code licenses have been made ... most have been summarily rejected by the rabid pro-coders ...

Some were far to condescending to the pro-coders for my tastes ...

I don't mean to sound "radical" ... I'm actually a political conservative and a responsible professional ... and I don't mean to be personally insulting to you in response to your commments above (really, *please* don't take this that way) ... but I'm sick and tired of people coming in and trying to be the "peacemaker" with the "Well, we have to figure out a compromise that everyone can agree to ..." shpiel.

This actually *is* a war ... it's been shaping up for a LONG time ... I've been licensed for over 20 years and I've argued that whole time for the elimination of the CW *test* requirement ... I am not alone, there are many, many of us no-code *test* advocates ... and I've said the entire time that "I'll defend to the death *your* right to pound brass if you'lll defend my right to choose not to ..."

This newsgroup was (primarily) started to provide a place for the code/no-code debate (and other subjects considered to "flame-prone" for the other groups ...) ... lots of articles/threads on this subject end up getting posted or cross-posted to .misc, too ... and that doesn't bother me one bit ... 'cause .misc seems to be carried more widely than policy and I don't approve of "burying" this topic in some second-class rathole just to stifle the debate ... (sort of like the way QST never provides any real space for any idea that doesn't fit with Sumner & Co.'s world view ...)

Anyway, any compromise that satisfies the rabid pro-coders will not go far enough in modernizing the ARS to bring in the technical folks we so desperately need to develop new, more spectrally efficient technologies,

will not bring in enough of the "new blood" we need to help grow our numbers for political clout, will not modernize the rules and eliminate the unnecesssary barriers to new technologies, and will not assure our future survival in the face of ever-increasing pressures on spectrum resources by the rapidly growing demand for a wide variety of commercial communications services and systems ... so SCREW the pro-coders!!! ... nobody is telling them they can't beep ... but they've had their way far too long and ham radio has suffered greatly from it ... ham radio's very future survival is in danger and we HAVE to make the necessary changes NOW *before* it's too late ...

I hope that you will come to understand that there will be a battle over this, that it is necessary and unavoidable, and that you will be on the side of modernization and securing the future survival of ham radio.

>Maybe in lieu of actually *copying* code, no-code licensees
>should be required to understand the concept

No no-code *test* advocate that I have ever met of talked to would (in my belief) object to a test on the theory of how OOK Morse transmitters work, etc. ... it is the conditioning of hte wetware to function as a crude modem that is objectionable ...

>that the Morse
>code seeks to maximize (though not always optimally)
>the information rate in terms of bits per symbol.

It does a pretty crappy job of it, compared to other methods that are available ...

>outside of complicated decoding electronics with LEDs and
>CRTs, it is the most efficient mode of communication in S/N limited
>situations.

"complicated" to a beeper, maybe ... not to many of us, however ... and I *like* CRTs and LEDs ...

>Most hams on HF have experienced the common situation in which
>a valid QSO with the needed country or multiplier is impossible on
>SSB -- only to be finished off on CW where the S/N goes way up.

If *you* want to do it that way, fine ... I'd rather forego the contact until conditions were better ... of shift to PACTOR and operate under conditions where you could not even *hear that the CW signal was there at all* ...

>When you couple the S/N improvement of CW with the ear's
>marvelous ability to adapt to and detect continuous tones in noise,
>CW is a wonderful mode for getting the job done when nothing
>else will. It is only obsolete in the sense that you, with your
>SSB rig or AMTOR TNC box, would resign yourself to the
>fact that communication just isn't possible that day, while
>I would be communicating.

That's baloney ... as has been pointed out numerous times, there are numberous digital modes that can work well below the conditions where you would cease to even be able to detect the presence of a CW signal .. like PACTOR at -18dB s/n ...

>
>Saying CW is obsolete is like saying reading by candlelight
>is obsolete. You have candles in the drawer in case the
>power fails.

Maybe *you* have candles ... I have lots of batteries and flashlights and such ... I used to have a generator (at my house in California) and when I lived on a sailboat for 5 years I had 880Ah of batteries and a 1500W inverter and a 105A alternator to charge the batteries ... screw candles ...

>I have a CW keyer in case the S/N is too low.

I'd rather have a DSP-based multi-mode device that would work when CW had long since ceased to be copyable ... they exist now and they're only going to get cheaper and better ...

>>And YES code continues to hinder our future ... and will as long as it's
>>mandatory ...
>
>I disagree. It's not keeping any more people away than it ever
>has.

It's been keeping LOTS of people away for decades ... that's the point .. I would think that as code gets more and more antiquated and behind the times, that even more people are sufficiently turned off by it as to say "the heck with ham radio ... it's just a bunch of nostalgia buffs who beep and keep everyone else out ..."

>before is highly unlikely these days.

Why? ... I think that's a pretty pessimistic assertion ... and I don't think it's true ... the only reason I can see it being unlikely is that the current rules drive away most of the technically competent folks who might become hams (I've got 5 or 6 in my own department at work right now who say "Morse code? Give me a break!") and the majority of the remaining beepers wouldn't know what to do or where to start if you put a gun to their heads ...

>Once the advances are made, then people like
>you and me can apply them at home to do self-gratifying things (like
>programming DSP chips).

I can develop new algorithms at home that do new and wonderful things .. I don't have to design and fab the DSP chip to make advances ...

>If you're trying to impress people at the mall, you'll find that
>people are impressed more by things that virtually no one can
>do, as opposed to things that everyone is doing.

Cellphones can't talk (directly, without toll charges) to distant states and foreign countries ... packet radio computer networks would dazzle folks if we could drag enough critical mass of beepers off of their damned "DX clusters" and get them to spend a couple of bucks to upgrade from 1200 baud AFSK to something decent ... we could easily field stuff at ISDN rates TODAY ... if there were enough people willing to adopt it instead of thrashing the channels at 1200 baud and bitching "a new TNC? Hell no, I just spent $129 on this one in '92 ... and it doesn't even have any tubes in it!"

This is my point exactly. I believe that we need an ARRL, and it is a mistake for serious members of our hobby not to join. On the other hand, the organization is far too oriented towards closed-door deliberation than it should be.

I happen to agree with many League positions on issues. What is striking, however, is the degree to which the League avoids discussing controversy. Our friend the Vice Director here on this thread was uncomfortable discussing his positions even on the most banal of issues: the CW requirement, limiting contests, etc. I had to keep looking at that American flag over on my wall to remember that I lived in a free country. Since when are we Americans afraid to let our thoughts be known?

Like many or perhaps most hams, I do not find ham clubs or hamfests to be an effective place to discuss issues. Club meetings take up too much time, and hamfests are few and far between. That pretty much leaves on-the-air QSOs, the internet, and QST as potential forums. QST has opted out, and this is unfortunate. CQ also avoids controversy, although to a lesser degree than QST. 73, well, they long ago lost touch with reality, if they're still around (I haven't checked lately.)

I am quite familiar with this form of organizational governance,
Gary, and you explain its principles well.

It is very common in such situations for the part-time elected
officials to dance to the tune of the full-time "professionals" even though
on paper it is supposed to be the other way around. One wonders if
that is perhaps what is going on in ARRL. (Don't ask me.) The most
notorious example of this in recent memory was the United Way situation
awhile back with that chap Arimoney. (which I would not compare the
ARRL to; so flamers please flame off!)

One way of preventing it is to have the chief executive stand for
election in the context of member-run non-profit organization like the
ARRL. This can prevent this sort of "capture" of an organization by the
full-time professionals, who have the time, unlike the part-timers,
to really focus on dominating an organization's agenda.

I got nothing against Sumner. Like most League officials, including
our Vice Director here, I haven't a clue what his positions are on ham
issues, since he doesn't share his views with the members he
nominally serves. (Yes, I do read his editorials. Pretty bland).

>Does anyone else see this response as extremely unusual?

No. It seems like very practical advice to me. Since the tests are now computer generated, it simulates the receiving test environment quite accurately. Thus it makes a good wetware conditioning drill. As long as the Morse hazing ritual exists, it might as well be gotten over as quickly and efficiently as possible.

>What's the fun of listening to computer-generated code when you can instead
>get on the Novice frequencies and actually carry on a (CW) conversation
>with a live human being hundreds or thousands of miles away?

The purpose to be achieved by the Novice Class is to get the Morse hazing out of the way as quickly and efficiently as possible so you can move on to more interesting and useful communications methods. Exchanging a few acronyms and abbreviations with someone with a shaky fist on a noisy band is no longer the most efficient way to reach that goal. It is a poor simulation of current testing conditions. The computer drill routines are better.

Nor is the exchange of a few abbreviations considered "fun" by many people. If it were "fun", everyone would do it voluntarily, and there would be no further excuse for the forced recruitment of the Morse receiving speed tests. No other amateur communications method requires a government mandate to get people to use it. That's a good indication that many don't find it "fun". (If they did, everyone would be using Morse, and would hold an Extra Class license.)

>Novice Class HF CW frequencies:
>80m: 3700-3750 kHz

You might want to get a current copy of Part 97. That hasn't been the 80m Novice band for quite some time.

>no one else can park their vehicle in that same spot. You're certainly
>not claiming ownership of a portion of the road but that's pretty much
>what it amounts to. It's something that we all accept.

Bad analogy. A repeater claims right of way on an entire lane, end to
end, of the highway when it it driving down it, not just the little patch
immediately under its wheels. What the coordinated repeater does is claim
exclusive use of an entire traffic lane. It is as if I were to claim that
one lane of the expressway could not be used by anyone else because I might
want to drive down it some day, and since I'm coordinated I always have the
right of way on that lane.

Lets try a more apt analogy. Consider a potential repeater pair as a
public staircase. Anyone is free to climb the staircase under his own
power. He must not trample others, and he must not bar use of the
staircase to others. It is public property. But he can use it as long
as there are treads vacant. Now suppose someone puts a repeater on the
pair. This is equivalent to converting the staircase to an escalator.
Now people can get up the staircase with the assistance of escalator
power. The staircase has become more usable. This is a Good Thing(tm)
for the community.

But suppose the person installing the escalator now says that only his
friends can use it, or charges a toll to others to use it. He has usurped
public property, the staircase, for his own private use. The staircase
is no longer available to the public which owns it because of the presence
of the escalator. Yet the public is not allowed to use the escalator
either. Their way has been barred by a private taking of public property.

This is the problem with closed and private repeaters. They represent
a defacto taking of public property, the spectrum on which they sit and
claim exclusive right of way, without any compensation to the public
for that loss. OTOH, an open repeater represents no such taking since
the public still has right of passage.

>
>Why is that? Should two people holding a private conversation on
>HF be forced off-frequency because an "open" net wants to start up
>on the same frequency?

That *does* appear to be the accepted "amateur practice". After all W1AW fires up without even checking to see if the frequency is clear when the scheduled time for its broadcast occurs. And nets do start up on schedule regardless of other activity on the channel, reference the 3995 kHz net and K1MAN.

But I would tend to say that both are using poor operating practices, no different than if your closed repeater should fire up without checking first for other activity on its transmitting channel. If a couple of amateurs are holding a private conversation on the output frequency, because they aren't *allowed* to use the repeater, you shouldn't just fire up your repeater on top of them. It is exactly the same sort of practice you're claiming to condemn on HF.

If you claim a repeater has special privileges different from ordinary amateur operation, then it also has special obligations to the amateur public for unilaterally usurping public spectrum.

>or by other methods of rigging the elections to make it seem like an
>outsider really has a chance. My opinion, jaded though it may be, is that
>the only chance that an outsider has to change an entrenched power group is
>by forming a rival organization.

Experience has shown that to be wrong. It is very difficult to setup an effective rival organization on the national level. It is almost always easier to infiltrate the original organization and take it over. The mechanisms of power are already in place, all you have to do is be clever enough to sieze the levers for your own purposes. Think of it like judo. You can use the strengths of the organization for your own purposes if you practice the correct techniques.

I would give as examples the takeover of the NRA by concerned members, and the capture of the Republican Party by the Goldwater Republicans. The problem with most failed revolutions is that the revolutionaries concentrate on striking off the head of the opposing party, assuming that will give them effective control. It never works that way. You have to infiltrate from the bottom up, seizing the real levers of power from below until the leadership at the top is left helpless and with no effective control of the organization. Then you can strike at the top and replace the leadership.

True political power always flows upward in an organization. When you short circuit that flow down near the bottom, by subverting or

replacing the minions charged with executing leadership commands,
the leadership at the top is left holding useless handle nubs which
don't work anymore. No colonel can command when his sargents won't
obey, and no general can command when his colonels won't obey. But
if you strike only at the general, both his loyal colonels and his
sargents will lead the troops against you, and you cannot stand.

You need to include answer option "D", It is a good buyers guide. Seems more that half of the issue is nother but ads for gear. Lets us compare prices between retailers. I considers it a yearly source book subscription.

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them.
Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I will place the columns I have already published in past issues of our newsletter. Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit old ones or add new columns as write them, and I wont have to send re-posts.

The Cost... I will ask that you do not edit the articles, and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to the address on the page.

Where... http://web2.airmail.net/gerryc/newham.html

Please bear in mind this site is still under construction and not all of them are there yet, but they soon will be. Some of the URL's arent resolving yet and some in reformating the text are doing funny things. But I am still working on it

I suppose that if your definition of "equipment" is so broad as
to include a simple connector, you might say that. I'd call that
electrical work, however, and not electronic assembly, since the
connector has no active devices and ideally does not modify the
signal in any way.

>Jeff KH2PZ

Sorry, that does not compute. It may be a reason for *Dxers* to
learn and use Morse, but it is not a reason for every amateur
wishing HF access to learn Morse. Contrary to the opinions of
some, running up high Dx scores is not the overriding goal of
amateur radio or of most radio amateurs.

Not that I'd support such a course other than as a last resort, but you must admit that if there is one chunk of spectrum safe from reallocation it is 11m. Politicians may be stupid, but they can count. I would support this idea as a last resort, because I'd rather have access to spectrum where I can experiment, interference ridden though it might be, than no access to spectrum at all. (In fact, the interference would add to the challenge. It would serve as a great showcase for SS and other advanced techniques.)

It's the same kind of crazyiness that goes on all day on 14.313mhz, it
just move to 80mtrs after 20mtrs closes for the day.
It's happening everywhere on the ham bands.
A BUNCH OF JERKS !!!!

2751. HAMS tell off military op on HF

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-07 00:00:00 UTC
From: seven@datasync.com
Message-ID: <58bv5s$pfj@osh2.datasync.com>
Source record: 210826

I though everyone would appreciate seeing this post to a list server.
Proof once again that CW as a requirement for HF privelege does not
prevent morons from getting HF. Nor does it prevent technically
ignorant HAMS from endangering our HF bands by taunting government
operators who are protecting our very way of life.

_____
December 7, 1996

3821.0 Local Ham operators trying to find
Andrews AFB on the map after Andrews (female
operator) walked on them bigtime with a series
signal checks with SAM 300. Andrews did not
acknowledge the Hams repeated attempts to break
into the comms and the Hams soon assumed that
Andrews could not hear them...

Standard procedure

(This is getting verrry wierd now!) As soon as SAM 300
shutdown for the night Andrews came up on freq for
a one-on-one with the Hams, "This is a *published* USAF
frequency."
One of the Hams replies, Sooo!!, you could hear
us all this time!...Andrews you are in the middle of the
Ham band" (etc., etc., etc...)
Andrews scolds them once more and is gone.

The part that really caught my ear was the "published"
freq thing! The Andrews op made it sound like these
[dumb] Hams should have gone down the the local libary
and looked up the "published" Mystic Star freqs!

Loud-and clear at 0523z

My comments:

A big round of aplause to the hams who not only insulted the airforce
op, but the dignatary or government offcial on-board the SAM(Special
Air Mission) SAM's are often ferrying important decission makers.

No wonder they want OUR bands!

Just for the record. The next time you are on a freq and a military op
comes up to use the freq, remember that we are borrowing the freq from

them to begin with. I know, we debated this subject at a local meeting with many persons attending. All the ancient older hams seem to remember that the government lends us these freqs so that we may play and experiment. Remember who gets these freqs back when war is declared?

Yeah yeah, we the people are the government and all the excuses you all can come up with. But just remember, the military not only protects you, but quite often flys around the guys who decide where you can talk. It may not be right or even correct, but it is reality.

Show some consideration for the people who protect your lives and the people who protect your privelege. Please.

KC5WCP
Eric

A tech and proud of it.

>the thousands of ice sightings transmitted from ships to all shipping
>during that lengthy period. Now can you estimate how many lives were
>saved by the code?
Wx bullitens are no sent with digital modes that could have been
created by a no-code tech like myself. No-code techs often are more
technically adept than their SUPERIOR coded counterparts. Ice charts
are more effective and are sent by FAX not CW these days.

>Not enough for you? Maybe a trip through maritime archives documenting
>the thousands of distress calls send and answered during those 70-some

>day or night. I couldn't stand a full CW watch without some call for help
>coming in, whether it be a medical aid, engine room fire, man overboard,

>or the more rare case of a total disaster.
These days maritime distress is generally on 2182, in voice or a DIGITAL format. In fact when the system is pounded out to perfection all a sparks will have to do(or heaven forbid if the sparks is ill or dead anyone on board who can push a button) is press a button and the ships position and a general distress call will be sent out to stations all over the world both at sea on on land. Big improvement eh?
>You have absolutely no idea of what you speak. Were you trying to be
>funny? You're just like the dozens of others on here who post stupid
>comments and skewed opinions. You've done a great disservice to the

>countless lives during this century.
No comment necessary.
>Jeff KH2PZ (who's held 3 Hawaii state swim records, run a marathon,
>was a US Coast Guard CW op, and currently homebrews CW equipment)
BTW, the USCG dropped CW from their roster several years ago. So did several international shore stations around the world this year. MARS also dropped CW this year and they not only save lives they brigthen them up as well :)

The diservice that CW is doing to the HAM community at large is astounding. Gee if CW were not a requirement for HF privelege, but rather a rigorous operating and theory test there would be thousands more operators available to assist during a mayday, which these day nor often than not, comes in over voice and digital modes.

CW does not prevent stupidity.

Eric

Mike, I also have a tek 491. It's OK but as you say, it's only
good for relative measurements. so you'll need that generator for
absolute measurements.

Gary Coffman <gary@ke4zv.atl.ga.us> wrote:

>That *does* appear to be the accepted "amateur practice".

The "accepted" amateur practice is that two people engaged in a
conversation will usually QSY to another frequency to make room
for the net, in order to be polite. There is, however, no requirement
that they do so.

>After
>all W1AW fires up without even checking to see if the frequency is
>clear when the scheduled time for its broadcast occurs. And nets
>do start up on schedule regardless of other activity on the channel,
>reference the 3995 kHz net and K1MAN.

The last I knew K1MAN and W1AW were broadcast stations, not nets.

>if a couple of amateurs are holding a private conversation on the output
>frequency, because they aren't *allowed* to use the repeater, you
>shouldn't just fire up your repeater on top of them. It is exactly
>the same sort of practice you're claiming to condemn on HF.

Its akin to W1AW or K1MAN starting a broadcast. Just as the FCC has
stated it is perfectly fine for them to start a broadcast (because
their schedules are 'well known') if you're parked on a repeater
output (also 'well known") then you must accept the fact that a
"broadcast" may start.

>If you claim a repeater has special privileges different from ordinary
>amateur operation,

I don't claim, the FCC does, and I merely operate within the circle of
regulation that they dictate. Fortunately, that includes the ability
to eradicate swine from my machine.

This is *not* what coordination grants you, and is a total misrepresentation
of the status of closed/private repeaters.

>But suppose the person installing the escalator now says that only his
>friends can use it, or charges a toll to others to use it. He has usurped
>public property, the staircase, for his own private use.

No, the frequency is still available for use by other people, as long
as they do not interfere with the repeater.

This is true regardless of whether or not a repeater is "open" or
"closed". Although not considered "good amateur practice", you can
still operate simplex on the input or output frequency of ANY repeater
system, as long as you do not interfere with the repeater.

A better analogy would be a public building with slots for elevators.
You obtain permission to install your own private elevator in one of
the slots (something accepted as perfectly legal to do). There are
other slots available. If you don't like to rules of using my private
(and privately-owned) elevator, make your own, or take the stairs.

The fact that my private elevator is on "public property" is irrelevant.
My vehicle parked in the parking lot of a park is also on public
property, but that doesn't extend you the right of using it anytime you
want to.

I think what we have going on here is a Bunch of Very Lazy People, who dont want to put out any Effort. First they Complain about CW,if they got there way with this the next step would be do away the Theory, and im sure there would be just as many Excuses why the Theory was outdated and has no real Meaning for someone to Pick up a Mic and talk to some Good Buddy.

What is strange is that when I listen to 2 Meters here, I hear alot of No-Coders studying for there CW test, I dont think Carl and his Group represent the Views of alot of No-Coders, I think Carl is reprensenting himself, and instead of putting out a little Effort on his part he would rather Whine about his Inabilties, and ask for another free ride.

Carl and his Group our Constantly Whining about Hazing, I guess ,as far as that Group is Concerned anything other than what they think should be Required is Hazing

I want to put up a 30 ft. tower on top of my 22. floor apartment. The reason for that is that there are many parabolic dishes and a metal forest of other antennas...

Does anyone have experience in tower installation? I know where I can get the tower segments, but unfortunately the guys at the store don't know how to install it.

I don't know what type of guy wire I need, nor how to attach the guy wire to the roof. Should I screw the bottom of the tower down or should I mix some
concrete?

I'm really getting desperate, I hope someone can help a fellow ham :)

I live on the 23 floor of a residential building and I'm just starting to set up an amateur radio station. I can't seem to find any information on how to properly ground my equipment at that height. I know that the grounding cable shouldn't be at the resonant frequency of the amateur bands.

What I did for now is I connected everything to the cold water pipe system. (It's grounded, I checked that). Is that ok? Or can "hot spots" develop?

The other thing are the antennas. I connected a wire (AWG 4) between the mast of the antenna and the wires from the lightning protection system is that OK?

I really don't know how I should solve the problem wot my station ground....

I hope someone can help me out here :)

I don't care if you know the material or not. I don't know transistor theroy very well but I still could design a tube circuit in a pinch. In time you will learn what you need as you need it.

I am new to Chicago and have found CTCSS encoder is mandatory. Most of the repeater are open but due to interferance are using "PL" (Motorola term for this)(See the ARRL repeater guide as which PL are being used on which repeater). Most new radios this is standard feature. Some older radios are set up for it but you neew to buy of build the encoder. Communication Specialist make several.

As for which radio to buy, several things will determine this. Budget, ah yes, the almighty dollar. Single band radios run new between $300 and $600 dollars. Dual band between $450 and $850. It use to be cheaer to buy a dual band radio instead of two single band radios. Space, cars are smaller, but they were never that big. Multi-band radios are more space efficient. Features, I like the new Standard tri-band because it is more afforeable and it has 6-meters. The Kenwood 642, 742, and 942 are moe flexable but slightly expensive with options. Brand? Your guess is good as mine. My station is divided among three primary manufactures. Kenwood, TenTec, and Ameco (yes Ameco).

Pick a radio that has the features you want, a price you can afford and then be flexable in case a good deal shows up on returned or used equipment. I recommend bands in the following order base on popularity. 2M, 440MHz, 220MHz, 1296 or 6M.

Good luck and 73's D. Pat Breeden WB3KUM/9 Zion, Ill.

I like this guy. If there were more of him this country wouldn't be in
such a mess as it is.
He is right when he notes that so many so-called "conservatives" are
hypocritical, that is,
the values that they preach apply only to others and not themselves. Lead
by example,
not by empty words!! If we want to keep the PRIVELEDGE of the amateur
service we
must be willing to stand up for its responsible usage.

Now, I do not profess to know exactly what's going on on these freqs, but
it is obvious that
there are those who are abusing their priveledges. This needs to be
addressed.

And you don't think that any of the ALLEGED "damages to [your]
business" are due to the fact that you made a silly mistake in your
original post (claiming that your pagers worked in "all 51 states"),
then went ballistic when anyone tried to point it out?

As for "discrimination", what are you suggesting? "Affirmative
action" for morons? (Or is the correct term "mentally challenged"?)
This "politically correct" bullsh*t realy does get tiresome!

Maybe the people from Guam should file a "class action counter-suit"
against you for your disparaging and hateful remarks toward that
territory.

On second thought, folks, I'm wondering if Michael Klein is not a
relative (or close disciple) of the "Rev." Steve Winter. His "call
'em names and threaten to sue" tactics are certainly similar!

These are all good questions, but I'm afraid from the replies below you may get more noise than signal here...The internet seems to encourage bad behaviour, unfortunately.

My recommendation is to find the local ham radio club and go to a few meetings and get acquainted with some local folks. You will make some new friends and learn a lot! I know that I have over the years. I'm sure you will meet many who will give you better advice than what you will likely receive here.

Hi!
I`m a norwegian dedicated air-traffic shortwave listener who have a simple Sangean ATS 818, and would like a new (second hand?) and better receiver. So I thought why not ask a guru. If you can find time to reply on these questions, I`d be happy. If not, I understand...
Now the questions:

If I buy a receiver e.g. Yaesu FRG-100, Drake R8(A) or Lowe HF 215/225, will I notice any difference? The problem now is that, during daytime, the noise is dominating any possible signal. That is the case most of the year.
Do you know if there is a scanning device integrated in any model?
And is it poosible to buy a second hand from anywhere?

Thank you in advice!

There's at least one of the computer Morse trainers that generates random QSOs and then builds FCC-type test questions from them. I don't recall which one, but it might be Morse Academy.

Other than that, either spring for $20 and get the Ziliak tapes (from beginner to Expert -- 714-990-8442) or about $30 for a Ten-Tec direct conversion receiver kit or $25 for the regen receiver kit (800-833-7373).

For years I have been using the soldering iron that I bought from RS which has screw in base heating elements in various wattages from 10 to 30 etc. Now of course they no longer handle the screw in base elements. Does anyone know what brand the original was (Weller, Wahl, etc) and if the replacement elements are available anywhere? The base is about the same as a 110 VAC Christmas tree bulb.

Thanks & 73

> Thanks, Pete - KA2YDY

Well Pete, K4OKA is Big Al Abernethy. He really is a nice old guy, I think he is about 73 years old now. The present crap started a few years ago when Rich (Pork Butt), WB2OTK had a major falling out with the guys on 94.5, and all hell broke loose. The group has decisivly broken into two groups, the Porkletts and the ARGers (the Abernethy Radio Group). Rich decided to jam the hell out of the ARGers and tries to egg on some of the old timers (including Al) to blow their stacks, causing them to give him and his cohorts a "radio whipping". Here's where the rubber meets the road.

You should know that Rich still has two outstanding Notice of Apparent Liabilities (NALs) with the FCC for a total of $10,500. This is from crap he pulled from his 14.313 days. Rich doesn't work, and spends about 18 hours a day on the radio, 7 days a week. I guess you get a little looney when all you hear is static 18 hours a day. He even took his radio with him on a "safari vacation" trip out west - he just couldn't let it go. The bigger question is why doesn't the FCC collect on the outstanding NAL? Why aren't the Federal Marshalls stopping by 2 Notch Trail, Anderson, SC and collecting his equipment for auction?

Now, the ARGers aren't exactly angels either. NALs have been issued to a couple of the others which were paid in full. People from Rich's group (as well as some other loonies) can't seem to pay for thier mistakes. Some famous (er - infamous) associates include Walter the Wino, a W2 out of Edison, NJ who puts out a fabulous musical signal - on sideband - a really tough engineering feat, but Walter cranks out those mean Sousa marching band tunes about the first week of every month, and watch out if there is a full moon during this same time period!

Another loony would inlude Raincoat Charlie of Ocala, FL, the legendary jammer who not only had to pay $500 of a $2,000 NAL (he didn't have the money!) but who is also spending some time in the Florida State Pen for taking indecent liberties with a minor - he was doing naughty things

with Boy Scouts. It is just shameful that these guys continue to bring the level of the service downward.

Some of us have become very good friends. We have organized, have about 58 members who stay in contact via e-mail lists, we have a homepage, and we have a new suborganization of 28 elite "Stump Jumpers" who try to stay above the fray. So yes, what IS going on there on 94.5...we'd like to see it cleaned up! Get rid of Pork Butt and his crew and I think you will see a major change.

Oh...and by the way. Are you sure it was K4OKA you heard? Al received an OO report dated while he was on vacation out of state. Pork Butt made a recording indentifying himself as Al and said a lot of incriminating stuff. What a jerk. ALl I can say is LOOK BEFORE YA LEAP!

: Well that would effectively keep anyone not interested in the code from
: getting into ham radio in the first place. Is that what you want?

I'd like to see more upgrading. If someone *really* wants to remain a
Technician and have a renewable ticket, perhaps what we need is either to:

a) continue to require a 5-wpm code test, making the Tech+ the only
renewable Technician license, or

b) require passing the General theory, or a reworked exam specific to the
modes above 50 MHz of equivalent difficulty, with no code requirement

: For those who could not develop the necessary code speed in the appointed
: time, it would mean being kicked out of the hobby after having invested
: several years in it. I cannot understand why you would want to do that.

Suppose that a) above became the norm, with the no-code ticket having a
lifetime of five years and being non-renewable. Are you saying that there
would be hams who couldn't learn a lousy 5-wpm over a five-year term?
Or upgrade otherwise under plan b?

Sorry, I don't buy your argument. When I was a Novice in 1966, I knew that
I had one year to upgrade, or go off the air. I know that if I don't pass
my 20-wpm code exam by next September, I lose credit for passing my Extra
written element. The ball is in my court. The situation is entirely in my
own hands, and losing credit would be no one's fault but my own.

ACE (aceflock@erinet.com) wrote:
: With all the debate about code versus no-code, I just have one comment.

: How many of you old-timers were elmered into amateur radio? Out of this
: group, how many of you have taken the time to get to know some of the
: newer hams and help them with advancing to a higher class of license.

I was. I'm currently teaching an Advanced-class course at our club, will follow that with an Extra, then General. This is for two reasons:

a) to put something back into the hobby, in return for the help I received getting on the air as a Novice, and encouragement to get a higher-class license

b) if an Extra course were available at any time since 1968 when I became an Advanced-class licensee, I would have had the Extra ticket long ago.

: Think about it, I have heard plenty of the older amateurs on the bands,
: both HF and FM talking about the good old days when they were elmered
: into the hobby. But I know of only a few that have stated they are now
: elmering new hams.

: We can all contribute in some way if we really try. I have helped quite
: a few of the older hams with computer problems and in return they are
: now helping me with my code practice. Learning is a two way street.

A good philosophy, Ace; the true spirit of amateur radio.

John,
All the "I am my radio!" defensive responses tell you that people are not
being objective. You need to listen to the fact that most hams hunt for the best
radio before they buy one. Each one has their own tastes. The best thing
that can happen out of this Q&A is that you widdle your canidate list to a
minimum. I own a Standard 528A, I receive good signal reports and I am able
to use it on packet. Do not be swayed by individual test results, I mean how good
is good enough. There is a balance between Intermod, Sensitivity and Selectivity that
can only be evaluated by using the radio. For instance I hate Intermod but not so much
that I will sacrifice Sensitivity. I hope this helps you make the best decision for you.

***EASY MONEY - FAST !!!!!

THIS IS THE FAIREST MOST WAY HONEST WAY I KNOW TO SHARE THE WEALTH !

Would you like to make thousands of dollars, quick, legally, with NO CATCH? then keep reading......please take 5 minutes to read this article it will change your life, just like it did mine.. it's true! you can make up to $50,000 in 4 - 6 weeks, maybe sooner!

I SWEAR I'M NOT LYING TO YOU.AND THIS IS NOT A SCAM! if your interested then keep reading;if your not, i apologize for wasting your time.

this is my second time i am doing this. the first time was 7 weeks ago and i have received $48,000. the first week i received $37 dollars,the second week i received $1,364 dollars and by end of the 3rd week i had received $12,856 dollars and to this date i have received $48,074 and money is still coming in.

when i first saw this article i though it was some kind of scam, but for $5 dollars and 5 stamps i thought i would give it a try.after buying a new car,new computer and putting a down payment on a house i relized this was the best $5 dollars i ever spent!

this process is very simple, and it consists of 3 easy steps:

(this whole process will take only a few hours of your time)

STEP 1: get 5 separate pieces of paper and write the following on each sheet of paper..."PLEASE PUT MY NAME ON YOUR MAILING LIST.YOU ARE NUMBER 4." get 5 $1 dollar bills and place one inside of each paper that you just wrote on,and fold each piece of paper so the bill will not be seen in the envolope (otherwise,nosey people who like to steal envolopes with money in it will get yours). put one paper inside the envolopes and seal it. do the same for all 5. you should now have 5 envolopes sealed,each

with a piece of paper and a $1 bill stuffed inside the paper.make sure those words that were stated above are stated on each paper. what you are doing is creating a service by this, this is PERFECTLY LEGAL. now then, mail the 5 envolopes with the paper and $1 dollar bill in each to the following addresses:

1. Dan Wood

1201 #A Anderson ST

San Clemente, CA 92672

2. S. Stapleton

6329 HWY 135 N.

Lake City, AR 72401

3. C. Crafton

1231 SW 61st Terr. #2

Gainesville, FL 32607

4. Michael Barratt

27 Park Ave

Poughkeepsie,NY 12603

5. Louie Page

2907 W. Gregory

Chicago, IL 60625

STEP 2: now take the first name off the list that you see above, move the other 4 names up (5 becoming 4 , 4 becoming 3 ect.)and put your name as number 5 on the list. you can slightly alter this article if you need to, editing what you need to edit.

STEP 3: post your amended article (with your name at number 5 of the list) to at least 200 newsgroups (i think there are 18,000 of them). all need is say, at least 200. HOW TO DO THIS: IF YOU HAVE NETSCAPE DO EXACTLY THE FOLLOWING:

1) click on any news group like normal,then click on "to news",which is on the far left when your in the newsgroups page. this will bring up a box to type a message in.

2) leave the newsgroup box like it is, change the subject box to something flashy like, "NEED CASH $$$" ,"READ HERE $$$" or "FAST CASH $$$!!.
3) tab once and you should be ready to type. now, retype (only once) this whole article,execpt to insert your name at #5, and remove #1 off the list, plus any other small changes you think you need to make, keep almost all of it the same.
4) when your done typing the whole article, click on file in this box, right above send, not where it says netscape news on the first box. click on "save as" when your under file. save your article as a text file to your c: or a: drive. do not send or post your article until you do this. once save move on to number 5 below.
5) if you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below file, and right above Cc: .
6) here's where your going to post all 200. ok, click on any news group then click on "to news", again in the top left coner. leave the newsgroupss box alone again, put a flashy subject title in the subject box, hit tab once your in the body of the message, then click on "attachments", which is below the subject box. you will get another box to come up. click on "attach file" then find your file below that you have saved; click once on the file,and then click open' now click on ok; if you did this right , you should see your file name in the attachments box, and it will be shaded.
if you use explorer its just as easy.... holding down the left mouse button,highlight the article. then press "ctrl" key and the "c" key at the same time to copy this article. then print this article for your records to have the names of those you will be sending $1 bills to. next go to the news groups and press "post an article", a window will open. next go to the news groups and press "post an article" a window will open. type your headline in the subject area and then

click in the large window below. press "ctrl" and the "v" and the article will be placed in the window. if you want to edit the article do so and then highlight and copy it again.now everytime you post the article in a new newsgroup you only have to repeat "ctrl" and "v" and press post.

7) THATS IT. each time you do this , all you have to do is type in a different newsgroup,so that way, it posts to 200 different newsgroups ..you see? now you just have 199 to go!! (dont worry, each only takes about 30 seconds once you get the hang of it).REMEMBER 200 IS THE MINIMUM.

THE MORE YOU POST THE MORE MONEY YOU WILL RECEIVE !!!

AND THATS IT !!! THATS THE ONLY 3 STEPS THERE IS !!!

you are now in the mail order business and will start receiving your $1 envolopes from various people all over the world within days. hint: you may want to rent a po box eventually because of all the mail you will be receiving. JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT, PLEASE.

LET ME TELL YOU WHY THIS SYSTEM WORKS !!!!

out of every 200 postings, lets say i only receive 5 replies (which is actually very low!) so i made $5 dollars with my name at # 5.

now then,each person that just sent me $1 makes, say only 200 postings now with your name at #4, which is a total of 1000 postings,not including yours too. 50 people send you $1 now; thats $50.00 you just made! now, then your 50 agents post 200 each with your name at #3,or 10,000 postings (50x200). average return is 500 a $1 each is $500.

they make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! and finally, 5000 people make 200 postings which with your name at #1. you now get a return or $50,000 before your name drops off the list. and thats if everyone only makes 200 postings and if only 5 people respond !!!!

no like me when your name drops off the list just find the latest

posting and start over again..YOU WONT BE SORRY !!!!

It's really amazing how all the little lemmings, who have no real knowledge of what is actually going on on this freq, are talking about "paying visits" to these so-called "offenders".

If they did an ounce of research on the situation, they would find that it is exactly as described....one band of people continually coming around looking for trouble and some guys who occupy that area who won't back down.

My guess is that all this rubbish about "cleaning up" 3894.5 will go about as far as the pink plump rumps of these little puritans ever venture from their keyboards.....not too far.

Do you use MCI math? How do you arrive at $2 from 21 cents?

First off, the database is free (just FTP it from the FCC). Second,
in bulk it probably does cost him 15 cents each piece of mail. Tack
on another 5 cents for the envelope and the letter in bulk, and you've
got 20 cents. The cost of production is neglible (computer spits them
out at night, underpaid secretary folds and stuffs and labels).

For sake of argument, let's say we're off by a factor of 100%. That
still means they cost him less than 50 cents to produce. That's a far
cry from $2.

Nothing Fred Maia has ever done has been for the "benefit of the
hobby". The same applies to the ARRL. As the old saying goes:
"follow the money". You can bet there is a profit in it, otherwise
Maia wouldn't be doing it.

Yeah...I feel your pain. I'd much rather spend hours and hours finding a replacement tip than buying a whole new soldering iron for $6.99. When I had the same problem I sent messages to several newsgroups and contacted many manufacturers in writing and via telephone.

But I do offer words of encouragment. After several days of effort and several e-mails, phone calls, and letters, I was able to find a replacement element, shipped by Acme, for $12 plus $3 S&H. I figure that if you count the value of my time, plus my expenses, I spent about 650 bucks but it's a hell of a lot better than letting "big business" take advantage of me!

Hang in there!

Steve is right. Either of these rigs would be great choices for a first station. I've owned both in my ham career. Don't even bother with the vertical...put up a dipole and you'll do even better!

Anyone that says that you MUST spend a bunch more on a radio is wrong. Yeah, a bunch of us spend more, but it's just because at this particular time we can afford it and like bells and whistles. The real difference in performance is 1) antenna, and 2) maybe a little power. I started with a $150 station like a lot of guys.

Get yourself a TR4C, a TS-520 or similar and throw a dipole as high as possible and you'll be right in the ballgame,ready to have fun.

> Dave/KB2ZYO

Huh? How many divisions can the ITU field?

The ITU is toothless and depends on the good will of its member
nations for cooperation. The FCC on the other hand has the power
of the US government behind it. And while not the power it once
was, the US government can still field a formidable force.

As I understand the situation in Guatamala, the decision to remove
70cm from amateur use was made by the local government, not the ITU.
The Guatamalan goverment had allowed amateurs secondary status on
parts of 70cm in the past, just as US amateurs have secondary status
on parts of 70cm (in the US the military is primary), but is now
intending to remove that secondary authority and auction the band to
its primary users (in their case commercial telecommunications).

They can certainly do this. It is within their sovereign power.
There is some question about amateur satellite allocations in
this band, however. It is uncertain whether Guatamala is a
signatory to the treaties regarding the amateur satellite
service. If they are, they have indicated that they will respect
those treaty obligations and keep the 435-438 MHz segment of
70cm available for the amateur satellite service. (Reportedly,
the Guatamalan authorities expressed astonishment when informed
that amateur satellites even exist, another fine job by the ARRL
and their IARU puppet of educating governments about the amateur
radio service. NOT!)

> a couple hundred $ on an HT instead of an HT *and* thousands
> more on an HF transceiver, antennas, accessories, etc.

Actually, *every* license class except Novice is growing. Most
now enter via the Tech license, but many don't stay there (about
40% of those who entered by the Tech route since 1991 have upgraded).
And of those who do remain Techs, most seem to eventually buy more
than a HT, especially after they find out what a poor general purpose
tool the HT is.

HF gear hasn't been a really hot seller for a number of years, but
other equipment, such as VHF+ mobile and multimode equipment, packet
equipment (usage has grown from 22% of amateurs in 1990 to 40% of
amateurs in 1995 according to ARRL surveys), etc have grown nicely.
And the recent introduction of HF novelties like the IC-706 and
DX70 have stirred a near frenzy of purchases by those who are
licensed for HF operation, or who want to exploit 6m with Tech
privileges.

>* Sun Spot Cycle - We are near the bottom.

Yawn. While this has hurt the 10m equipment market (a niche filled
mostly by CB equipment manufacturers), it really has little impact
on purchase of equipment capable of operating on the lower HF bands.
40m, 80m, and especially 160m are more productive at a sunspot minimum
than at a maximum. More important, IMHO, is the rise of restrictive
covenants and apartment living which have made putting up an effective
HF antenna a major problem.

>* Computers - Most hams have computers. These are constantly being
> upgraded/replaced because the technology changes so quickly.

> A few people must have the latest transceiver with all the
> bells and whistles but most are probably quite content with
> a 10 or 15 year old HF transceiver.

That's true. Other than novelty value, there has really been little advancement in HF transceiver technology in the past 10 years. A IC-735 is still competitive with today's radios for most HF activities. But computer power has been doubling about every 18 months while costs have continued to fall. This offers much more bang for the buck than a new HF radio.

>* The Internet - 12 years ago Packet Radio was new, exciting, and
> impressive.
> Try demonstrating a 1200 bps connection to a text-only BBS
> to anyone now. They'll laugh all the home where they can
> access information around the world at 28.8k bps by pointing
> and clicking with a mouse.

Sure, but we like to show them websurfing over our 56 kb network from a mobile station instead. That still makes their eyes pop. If you want one answer why AEA folded, it could be their reluctance to bring out faster equipment. They were offered a non-exclusive license to produce 56 kb equipment *10 years ago*, but refused. They wanted to milk the low speed market for all it was worth first. In retrospect, that was a serious error because it let the landline modems hams also use far outstrip what they could buy from AEA for use in amateur radio.

>HF propagation will improve in a few years but that's the only good
>news. Hams will probably continue to spend more time and money on
>computers and Internet access and less on ham radio equipment.

Perhaps. However, PacComm finally has licensed the 56 kb modem, and is producing it for sale. Now we'll see if the average ham wants fast network access over radio or not. The computer is very likely to be central to the amateur station of the future. VHF+ high speed digital networks, and lower speed but still quite capable HF networks using Clover, PACTOR II, or other advanced modulations, are the areas which would appear to be natural avenues of growth. AEA virtually ignored both areas. Their efforts beyond the archaic PK-232 were quite unsatisfactory and uncompetitive.

>With less revenue there will be less new product development and
>less advertising. With less advertising the magazines won't be
>able to survive. Take a look at the list of advertisers in a
>recent magazine and the same magazine from a few years ago.
>
>Does anyone have any ideas on how to reverse the trend?

There is some reason for concern that manufacturers who cater to traditional activities are likely to see reduced revenue growth. They are offering little that is really new and innovative, and they are (like AEA) often ignoring opportunities to license

techniques which are new and innovative. They aren't serving to
lead the market.

But the regulatory environment isn't helping either. Especially
on HF, there has been a reluctance to authorize newer and better
techniques (or drop archaic restrictions). So there has been little
real reason for the manufacturers to offer anything new. SS and other
wideband digital techniques would do much to revitalize HF activity.
The very restrictive HF autoforwarding regulations should be modified.
Etc.

The attitudes of some in the amateur community don't help either.
There is a strong undercurrent of anti-technology, anti-progress
attitudes among some entrenched segments of the amateur community.
This is harmful to the service, and of course is reflected in
harm to the amateur market manufacturers as well.

And finally, there is another factor, the rise of the 800 number
mega-dealers who work on high volumes and low margins. This has
caused a virtual collapse of the local dealer networks. No longer
is there a local guru on the corner who can guide amateurs into
new activities and introduce them to new equipment. Since many
traditional amateurs have abandoned the elmering role (see above),
and the local dealer network has dried up, there are few opportunities
to introduce the average amateur to new technologies and new ideas
except via the magazines. And the magazines have done a generally
terrible job of that.

I knew of one, years ago, in Ohio -- but it wasn't a "rotary beam"
per se -- it was all made with wire, I think he said 17 miles of it,
and a million feet of wire in the ground system. All the "rotating"
was done with phasing. It was awesome. If he felt like talking
to Australia, he did. Way too long ago to remember his callsign.

Ummmm, but I'll bet a good attorney could raise a lot of hell
over that. If a coordination group assigns you a frequency
on one that is known to already be active then they are
encouraging an interference problem & they are at fault. The
first operator has done nothing wrong because the law does not
require coordination

> filed for coordination, I was told about the guy, and was also
> told that his repeater has been down more than it has been
> up for over five years, and it has not been heard at all for
> at least 2 years.

If you could STRONGLY **PROVE** that he was not active for
2 years then you win. IF not, you loose.

We had a very similar situation almost exactly like your
description here in Oregon. The original guy raised a lot
of hell & the Coord council hired an Attorney who was also
a ham to atbitrate & make a decision. The coord council lost!!!!!!
The original had some real hokey proof that he had been
operational, which as far as I am concerned
was all lies but that was not my decision to make.

> me off the frequency. Why should I? I played by the rules and
> he did not!

That depends, he was there first & he played by the rules too.
(no rule says you must be coorinated)

-Sticky situation.

That is not exactly correct. A closed or private repeater means that
others are requested NOT to use that frequency(s). But, it is only a
request. You still have the legal right if you desire.

It's sorta like when you go to a park & a shelter area is roped off for
a particular group or function. You could still go there if you wanted,
but
it is obvious that you are not invited or desired.

2803. Ham band == Radio National Park

I though o' this idea while eating dinner. That closing a ham band is like closing a national park -- in that a resource that was previously available to private citizens is now open to business or government only.

>and "Joe consumer"??? ... if we don't do A LOT to gain political clout
>and justify our existence, we will cease to exist in less than 20 years
>(probably MUCH less) ...

You know, my thinking is that the technical competence of your Joe ham radio operator doesn't really matter that much in terms of advancing the hobby. That's because technical advance comes primarily from a tiny elite who has the skill, time and money to design, construct, advertise and sell new equipment. The technical competence of Joe Ham does come into play when he has to figure out how to hook up all this stuff. But, really, I think the hardest part for the user of any 'cool new thing' that'll be developed will be climbing up the tower to put up the antena. Most hams, I think, can follow well written instructions, I think. And if they don't have enough remaining brain cells to pull that off -- well I don't want to talk to 'em anyway!

Maybe what is really the issue here is how to motivate the technically advanced folk to work their magic. In spite of complaining of the absense of technical advance, my quick impression is that there are some folk working on hard problems. Like the Phase IIId. And the TAPR guys always seem coming up with some new gadget here or there. I wonder how these things work? Are the TAPR products able to pay any money to people working on them? How does this work anyway? I don't know about you guys, but I think my limit to being able to slave over a project for no pay ends somewhere in the 30 hrs a month range. You know?

Maybe part of the issue is that a good hunk of the ham radio budget seems to end up in Japanese transceivers with limited bandwidth. It seems to me that a radio with the ability to transmit at UHF at the legal bandwidth limit could be the basis for all kinds of interesting projects. The ARRL does seem weirdly obssessed with squeezing the bandwidth of voice and CW down for HF band -- though I think the chances of building a gadget that cleans your sinuses in terms of new and amazingness is more likely to do with higher bandwidth, now lower.

Hi Dad,
Yep, we got it. Matter of fact, the whole world got it. Glad to hear the
cataract surgery went OK. Very speedy. Too bad the doctor doesn't charge
by the hour instead of by the eye.
No snow on our island, although it did get pretty chilly here tonite, it was

down to 79 degrees. Winters in the Pacific get colder every year.
Glad to hear Mom is feeling better. Give Mom a kiss for me. You two
have a Merry Christmas. Keep in touch. Let me know if you don't get this.

Bye for Now,
Jim KH2D

Well first of all, One, you wouldn't ask 'A valid questionS', you would either ask 'SOME valid questionS' or 'A valid QUESTION'. You aren't being discriminated against. You came along a posted a rediculous add, and a bunch of people responded to it. Same thing would happen to ANYBODY who posted what you did. When some people responded to your '51 States' announcement, you responded by being a smartass, which in turn got you more attention. I haven't seen anything anybody said to YOU that was any worse than what you said to the people who replied to your rediculous add. You added fuel to the fire by pestering people with private email. For example, in a private email to me you said:

"PUERTO RICO HAS EVERY RIGHT THAT EVERY OTHER STATE HAS. SO THATS WHY MOST PEOPLE CONSIDER IT A STATE.

YOU DON'T NEED A BEEPER BECAUSE I'M SURE NOONE WANTS YOUR NUMBER ANYWAY.

GUAM SUCKS"

>You are entitled to express your opinions against someone's views, but you
>cross that thin line when you make remarks against a persons character and
>make those remarks to a person or group.

Exactly. For example, when you publicly call somebody a 'BOOB from GUAM' and suggest that everyone 'flush twice, it's a long way to Guam' you may have crossed that thin line. You are obviously unaware that Usenet postings are archived in several different locations, so everything YOU typed is also available for future reference should it be necessary.

>When you make remarks against a person character such as you have, you are
>then liable for the damages to my business, and my character.

I think you meant 'remarks against a personS character' ?
Yes, you might be. But we are all (most of us, anyway) adults here, and we are use to seeing the personal insults fly, as that is all part of the Usenet game, so we probably won't waste any time or resources taking you to court. Maybe you did enuff harm with your 'GUAM SUCKS' posting that the Guam Visitors Bureau would feel you damaged their tourist business to the point litigation was required, but I doubt it. We in RRAP settle our differences like real hams. Once a year we all get together in the parking lot at the Dayton hamfest and beat each other up.

You made a fool of yourself with your '51 States' advertisment. I would suggest that you are continuing to make a fool of yourself with your public persecution of Evan Platt.

Usenet has a very short memory. If you stop making a fool of yourself, you will find that you can join any discussion that is ongoing here and your discrimation complex will hopefully disappear. If you continue to draw attention to yourself

by persecuting Evan Platt and making threats, you might as well get use to not fitting in with the rest of the gang. Lighten up a little, One, and your problems will all disappear. They are all between your ears.

>elmering new hams.

Could be a reflection on the new hams that are entering the hobby ?
The 'good ole days' are over, according to Squiggy. Nobody is interested in this DX stuff or contesting anymore. All we are interested in now is digital networks at 15.2 gadzillion baud. Yackers and DX'ers and contesters and 'beepers' are dying off, and the new breed is ready to take over. Ever see any of those silly stories about the QRP'er who goes up the hill ? Nobody readys that stuff anymore, we are all too busy soldering our ones and zeros together to connect to the network. Right Squiggy ?

Elmering is really not something you do on a street corner. But after you have been a ham for a while, you meet someone who is really interested in the hobby, and you help them out. I met a few 'new hams' a while back. They stopped by my house on the recommendation of another ham to see if I had any old HF radios I wanted to sell. I dug one out of the closet, showed it to them, and the very FIRST question was 'Does it work on 11 meters ?'. Which really didn't encourage me to run for my Elmer hat.

Over the years I have seen a lot of people come into ham radio for all the wrong

reasons. One ham here did 4,000 autopatch demonstrations a week. When he finally did recruit somebody, they were very disappointed to find out that they couldn't call the office on their new HT. We had one knuckle head here a few years back that tried to recruit anybody and everybody he could find. He use to give novice tests on the hood of his car (literally). We met one guy in a restaurant one time when we had to move the club meeting on the spur of the moment. He asked if we were hams. When we said yes, he said he was too. I ask his call and got 'I don't remember, let me see if I still have that card in my wallet'. He took a novice test on the hood of a car. Everyone who comes into ham radio is not 'elmering' material. Some came for 2 meters only, some came for a new CB radio, some don't know why them came at all.

Overall, I think anyone who enters ham radio and is really interested in ham radio gets all the help they need, at least they do around here. Somebody, I don't recall who, posts a 2 mile long elmer list in one of the newsgroups every month or so, so I imagine there are a bunch of hams around willling to help new people that need help.

The other thing you have to remember is that judging the state of ham radio by what you read on here is like taking a code/no code survey of fourty people on a radio show - not very conclusive to the overall situation.

But the main thing you have to remember about elmering, Ace, is that before you elmer anyone, you have to find somebody who wants to be elmered.

The real problem lies in understanding that amateur radio is really many hobbies within one hobby. It goes beyond CW versus phone. There is room in amateur radio, and should be in most clubs, to promote everyone's favorite mode of communication.

Having seen the Internet before packet radio, I am amazed that so many fellow club members are so taken by this mode.

It sounds like this club's president needs some understanding of the overall aspects of the hobby.

Where is this club's Board of Directors while all this is happening?

>How do you calibrate the vertical (signal strength) scale?

The amplitude scale is strictly relative, unless you do use a calibrated source as reference. That's the downside of the 491 as compared to the old HP141T systems. On the other hand, the 491 is smaller and lighter.

> Also, any recommendations for who to get a user and service manual from?

Buy one from Ed Matsuda (619-479-0225). He may or may not have an original, but his copies are of good quality and his prices are reasonable.

Considering the state of human communications, perhaps voice should be
made verboten (a little Germanic lingo) and replaced by keyboard modes
ONLY. The test would deal with placement of the damm caps key
(something all too many people that post on this newzgrup are unaware
of), the need for new keyboard styles, the ever-popular type-ahead
buffer and ergonometric styling!

Now of course, since a keyboard can be used to send CW, both sides of
this problem can be satisfied.

Even if the question pools remained public, better answers could be designed. Even on the Extra exam, usually two of the four answers to a given question are way out in left field, if one has tried to study the theory at all.

: > 6 - the novice class license returns to a non-renewable state

: what would that gain? Some operator are happy with its privileges. Are
: you going to make them go back to Xtal control too? (I used Xtal control
: when I started in 1970)

The Novice ticket never should have been made renewable, if there was to be an *incentive* to incentive licensing. By the same token, the no-code Technician ticket should be good for no more than five years; also non-renewable. Both are *entry-level* licenses for HF and VHF, respectively.

In practicality, how many hams are there who are Novices? Out of 183 in our club, only one is a Novice. After working with our VE team for the past 18 months, I have yet to see anyone test for only the Novice ticket.

: >off the "motherhood" posting I did.

: There you go again. It wasn't a pot-shot. It was a serious recommendation.
: Too many people make suggestions to their ARRL reps, only to be told
: what is wrong with what they are suggesting.

Taking into account the information you had when you wrote your posting and
the general content and tone of the rest of your posting (which I had
read to the end, twice, before starting on my reply), I stand on my claim.
Flames and pot-shots are part of the Internet culture. I personally
believe that they interfere with a serious debate. But if taking pot-shots
is your style, then go to it. When you do, though, don't be surprised
if you're called on it, or if some flat-out disbelieve you when you claim
innocence.

: > His statement that I should "listen
: >more, and talk less" completely ignores the fact that he has no idea
: >whatever how I spend my time in service to the League

: I was refering, *primae facia* to your posting, in which you took a
: big, wide, roller, and painted a whole lot of dialogue in a fashion
: which invalidated them.

: > and to Amateur
: >Radio, whether that service is good, bad, or indifferent, whether I have
: >in fact acted on ideas that I have read here in .misc and in .policy, or
: >how much time I spend listening and how much time I spend talking.

: You're right. I only used the evidence of your posting, which sickened
: me.

I'm sorry that you were sickened. It was a sincere effort to get some of
the folks charged up. It's obviously charged up a few of you in a way
I hadn't intended.

: > He
: >started off, in fact, with one of those gratuitous pot-shots I mentioned,
: >and later even claimed that I denied that a problem exists!

: Again, your posting seemed to indicate a marked insensitivity to
: the credibility problem with which the League has saddled itself.

: >YES I understand that many of the League's constituents believe that the
: >ARRL is unresponsive, is organized to protect its own unresponsiveness,
: >and is designed to resist effective change.

: Yes, but do you believe that they have good reason for feeling
: disenfranchised. You see, in the face of such an understanding you
: can do one of two things: you can try to bring them around to your
: way of thinking, and/or try to convince them that they are misinformed.

: Or, you can admit that there is validity to their feelings and experiences
: and DO THINGS WHICH WILL LEAD THEM TO CHANGE THEIR MIND.

Do I believe that many hams have good reason for feeling disenfranchised?
Absolutely, yes. I have seen it, perhaps even more than you or many of
the others in this group have seen it because of the number of clubs I
visit, hams I talk with, phone calls I receive, and mail I read. It's
there. I have fought against it in the past and will continue to fight
against it. I only wish more would take the time to get involved too,
rather than to complain without taking constructive action. Discussion
is always an important part of the process, but at some point it's
necessary to get out and DO SOMETHING, or else give up. I'm not giving
up, and I hope you aren't either.

: Now saying, essentially 'if you don't like it then give more time' isn't
: likely to bring them in. Especially when they've experienced rejection
: in the past. It feels an awful lot like you're trying to shift the blame
: onto them.

Come on, Greg, give me a break. In no way have I tried to shift blame
onto you, any of the folks who post here, or anyone else. We have
serious and long term problems in amateur radio that are going to take
time and effort to fix. Some of the comments I've made in this thread
were unfortunately phrased in such a way that a few of you were irritated,
and I regret that. Making mistakes is part of the learning process too.

: >But the suggestions I made in my "motherhood" posting still stand. If you
: >have a complaint or a suggestion, by all means post away. I'll read it,
: >others connected with the Board and at HQ will read it, and sometimes action
: >will be taken.

: Prove it. Give credit where credit is due. Show us in the minutes where
: it says 'as a result of a posting by WA6AAA on usenet, we are resolving
: to do the following:'

Change in organizations such as ARRL is most often the result of
evolutionary processes rather than revolutionary ones. Discussion and
criticism can and does change attitudes, and these changed attitudes,

in time, can and have resulted in change. No, I can't point to a Minute
that gives specific credit to a posting here on the Internet. That's
not the way the process works.

: > But if you want to make a difference, a *real* difference,
: >get involved yourself! If you're rebuffed - and I know that happens, -
: >don't just sit at your keyboard and complain, GET INVOLVED AND DO SOMETHING
: >ABOUT IT!

: Jim, you know better. Politics being what they are chances are that if
: someone complains about their SCM to their Division Director that the
: Director will back his buddy (just like bosses back each other at work
: most of the time). In fact THAT'S EXACTLY WHAT THE DISENFRANCHISED ARE
: COMPLAINING ABOUT.

No, I DON'T know better. What I DO know is that having a jaded, can't-do-
anything-because-the-deck-is-stacked attitude is guaranteed to result in
no change whatever. As far as complaints about the "SCMs" is concerned
(an appointment that was phased out in the 1980s - they're now SMs, with
expanded responsibilities), your comment suggests that you may not realize
that SMs aren't responsible to their division directors. A director is NOT
the SM's boss. A director can't pick up the phone and direct an SM to do
a bloody thing. What directors CAN do, as a group (but an individual
director can't do) is put policies and procedures into place that effect
the way SMs operate. Ultimately, though, it's the local League members who
have the ultimate power. They not only nominate and elect the directors
and vice directors), but they also nominate and elect the SMs. If an SM
isn't doing a job to your liking, then you have the option (and the power)
to replace him with someone else.

: Greg

: >experiment!) Where is the money going to come from to pay for the extra
: >pages? Or, what is going to be left out of QST in order to make room?

: <insert tongue firmly in cheek>

: Oh. Okay. I understand now. It's just a question of space. It's not that
: QST *wants* to be one-sided or to present the ARRL position as
: as faites accomplis. It's just that there isn't *room* to provide all
: sides of important questions. It's not bias, it's just space problems.

That was a "what if" kind of statement, Greg. The policy issue is
obvious and I didn't think it was worth mentioning. I brought up the space
problem because many people have the misguided notion that all one has
to do is sign a piece of paper and wonderful new things happen. It
doesn't work that way. The ARRL has members with MANY points of view,
some of which aren't the same as yours. They are members, they deserve
to be heard to, and their needs deserve to be considered too.

: After all, it's *ever* so much more important to print the QTC of every
: archaic CW net transmitting useless 'Greetings by amateur radio' -grams
: in great circles than it is to present the case for elimination of the
: CW requirement (where I personally agree with the ARRL stance, lest you
: think I'm beating *that* drum). Show me an SCM with something more
: interesting to say, and I'll show you a mighty rare bird.

: Or how about publishing the National Contest Journal but *still*
: loading the pages of QST down with every damn score in every log
: sent in. Can you say 'boring?' Packet networks, the internet, and
: the journal, but no, we have to foist these pages off on everyone.

: Don't even get me started on the 'beginner' section. Can you say
: redundant? Can you say 'done to death?' Can you say 'go out and
: buy any Ham Radio 1-A book?' Can you say 'who the f*** would want
: to build an antenna out of PVC pipe when there is copper, anyway?'

: In short, Jim, and with all due respect, and to quote our friend
: at RST, 'bullshit.' Space is not the problem. Lack of openness to
: alternative view points IS. The fact that too many of those who
: control the pages believe that their purpose is to tell their
: constituents what to think IS.

: Greg

You're right, Greg, space isn't THE problem. Space and many other considerations make it a much more complex problem that you seem to think it is. Personally, I'd like to see more lively discussion in QST. But that's my personal opinion, and I, as an individual can't change it. But I certainly can express my opinion and work toward that goal.

>station.

Cummings is incorrect in this matter. Passing a multiple guess exam
in which the answers and the questions are known in advance does not
demonstrate the above. A written test on theory, administered by
VECs, and not published in advance, would accomplish the task
at minimal extra expense.

>If the current national programmes were insufficient, we would notice a
>significant number of infractions issued to amateurs for out of band
>operation and other such infringements.

We're discussing exams relating to electrical theory, not rules and
practice.

>There is no such indication that
>amateurs are a significant burden with respect to interference to other users
>of the spectrum. Indeed, due to this lack of infringement characteristic, one must applaud
the
>current theory examination because it would seem that amateur's lack of
>operational incapacity is in the effortless application of their abilities.

This is all related to practice, and rules, not theory.
We could accomplish the same thing by turning the exam into a "Drivers
License Exam for Radio Operators"

I can think of lots of things. No, I don't care if I go to jail.
Why?

Lots of these a**hole hams are, shall we say, "conservative". They
preach Family Values and Personal Responsibility, even as they
flagrantly flout both of those. I think I speak for many when I say
I'd like to call them on it. Extremely.

Starting from confrontation, "You're being an a**hole. Stop it.
NOW." all the way through physical violence and crashing their towers
through the roofs of their houses. That just may activate a little
voice in the back of their heads, "you _are_ an asshole, stop it!".
Or was that from their spouse?

Yes, I'd be taken away. But it'd be worth it, believe me.

Only $6? I've heard of commercial firms doing the same "service" for
commercial licensees charging considerably more, like $45-$100 and up.
$6 seems to cover expenses. (My license expires in 2002, but I'm not
sure there'll still be an ARS then.)

Anyone know of any mods to open up the UHF receive on the Alinco DJ-G1T?

Also, is this an unpopular radio? I have one & like it a lot, but I hardly see any for sale on newsgroups or in magazines. I don't know if very few people have them or if everyone likes them so much nobody want to get rid of them.

: >Roger, I'm not going to get into any sort of discussion such as the above
: >in this forum. I am a Vice Director in the Pacific Division, not in the
: >Southwestern Division or the Northwestern Division or the Dakota
: >Division.

: So let's get it straight. As a second-level official of the official
: organization, you won't make your views public in a national forum.

: Okay, fine.

I won't get into a discussion of my views in THIS forum (Read what I wrote again) for a variety of reasons, one of which is that I don't think that the time it would take to do a proper job of responding to most of those questions is worth the effort. I have other responsibilities other than posting here.

Let me give you an example. One of the questions is "Do you support, or not support, K1ZZ?" What in the world does that question *mean*? That is a six word question to a subject that could go on indefinitely, particularly since one of my postings would inevitably result in a flood of brand new follow-up questions.

Another example. "What are his [K1ZZ's] views and how do they square with yours." What does that mean? Views on WHAT? General questions that can only lead to endless bickering.

Then, I'm asked, "What is your position [on the Morse requirement issue]?" I have personally given over 50 talks on Morse code and the Morse requirement over the past two years. No exaggeration - over 50. I am *very* familiar with the issues and the emotions involved. (Incidentally, my own thinking has been slowly changing, in part as a result of many thoughtful comments I've received at clubs and conventions here on the Internet, and in phone calls, one of which I had as recently as earlier this evening.) The question is a simple question on a deceptively complex problem.

: >My views on many subjects related to amateur radio, including some of
: >those you mention above, are well known to many hams in the Pacific
: >Division, both ARRL members and non-members. I have spoken at every
: >Pacific Division Convention in one capacity or another for many years,
: >have participated in every ARRL Forum at the Pacific Division Convention
: >since I was elected Vice Director in 1993, am available on the floor
: >at every Pacific Division Convention, and appear and both speak and listen

: >at dozens of club meetings every year in the Division.

: Ah, so people have come to you to get an 'audience,' at a place
: of your choosing.

That's not the way it is, but you're free to distort my comments in any
way you wish.

: And to think I once voted for you, when I lived in your Division.

: Well, at least I admit my mistakes. Oops.

Thanks for your earlier vote. Perhaps some time in the future we can have
a *real* conversation. From the postings I've read from you, you have a
lot to offer, but your tendency to rely on sarcasm gets in the way sometimes.

: >If you want to know what personal stands I take on issues such as
: >those you mention above, come to the Pacific Division and I'll be happy
: >to talk with you.

: Once again; you're an officer at the National level, second in line
: to the National Board. If you aren't willing to respond to simple
: questions on key issues, you have no business so-serving.

: Greg

Again, Greg, they aren't simple questions. To go down that list and do
the questions justice isn't an effective use of my time. I exchange
views with people on these subjects all the time, but I'm not going
to get into them in this forum. Sorry.

: James, forgive me, but I am dumbstruck. Let me get this straight.
: You refuse to discuss your views on this forum on a couple of pretty
: straightforward issues. You are OK with criticizing those of us who do,
: as you did in your last couple of posts, but you won't tell us where
: you stand. I'm supposed to get a plane ticket and fly to the Pacific
: Division, wherever that is. (I'm sitting in my shack looking out at
: the Pacific Ocean, does that help? Forgive the sarcasm.)

Roger, by the time your read this, I hope have read my comments in
reply to a posting by Greg Bullough. I hope it explains the situation,
as I see it.

: I would say, offhand, that Jim is afraid to speak his mind on any
: substantive issues, because he fears that it would create political
: problems for him back in Newington.

That may be your conclusion, but it's incorrect.

: If there is anything more symptomatic
: than this of what is wrong with the League, I'm hard pressed to think

: of it.

: Incidentally, Jim, before you get off criticizing me, I vote in my
: League elections, and I have published both an article and a number of
: letters in QST. So don't get off saying **I** haven't done anything
: about this situation. It is **you** who are failing to be
: straightforward.

Nope, I'm not going to criticize you personally. I also haven't - nor will I, say that you haven't done anything. I know from other postings you've made that you take these issues very seriously.

Having said that, and at the risk of offending you (which I don't want to do), I'll offer some constructive criticism. That is, as explained in an earlier posting, some of the questions you posed aren't well-defined, some would open up endless hours of postings and answers to postings on my part, and some of which ask for simple answers to complex questions. That list of questions put me in an impossible situation. Either I try to answer them fully, which could go on *endlessly*, or let them go and take the heat - which I'm now getting. You know my decision. If this were a local group, I might have bitten the bullet and gone ahead.

I don't blame anything at all on you personally, but rather think it's one of the evils of this medium. It's all too easy to hammer out a list of questions or replies, fingers flying along the keyboard. It's a super efficient way to write and push text down the wire, but it also means that things aren't always well thought out, which isn't conducive to thoughtful discussion. We all do it.

I sometimes travel to LA on business (although it's been over a year since the last trip there), and perhaps we can get together one of these days on your home turf and have some fun. I also plan to be in Dayton this coming May.

I hadn't realized you'd published in QST - good deal! I hope all the problems and these discussions don't discourage you from writing again.

After reading and replying to a number of postings on this thread this evening, I've decided to draw my participation in this discussion to a close.

I've learned a lot over the past few days. I've learned more about the modus operandi of this group that I hadn't learned from lurking in the background over the past years, and that's a real plus. Most (perhaps all - I haven't really kept count) of the postings were interesting and helpful, even those that I thought were off-base. I've also received quite a bit of private mail in the last few days, some of which was supportive, some not, all was helpful. Some was thoughtful with some real gems of ideas, while others (only two, actually) were abusive. Even the abusive mail made an impression (and by saying that, don't think I'm condoning that kind of stuff!) because, although I knew of the feelings some hams hold toward the League, I hadn't realized how really deeply upset and bitter some of you are. I don't get those kinds of comments and vibrations from face-to-face meetings.

What next? Based on the new insights I've gotten, I have several new projects to work on that I hope will help. What are they? No comment, except that I hope I can make a difference with them.

Meanwhile, once more sounding like a bumpy record, I do wish more of you would become more directly involved than you now are. Criticism is good, constructive criticism is better, but those willing to take time out of their lives, roll up their sleeves, and show the rest of us how to do things right, are golden.

Really now, folks, how many hams do you know with rotary beams on 80
meters with enough gain (read narrow beamwidth) to make triangulation
even possible, much less feasible?

Well that would effectively keep anyone not interested in the code from
getting into ham radio in the first place. Is that what you want?

For those who could not develop the necessary code speed in the appointed
time, it would mean being kicked out of the hobby after having invested
several years in it. I cannot understand why you would want to do that.

I thought that the lawful ability to transmit upon, thereby utilizing
the radio spectrum, was a *privilege* not a *right*. Much like a
driver's license & driving on public roads.

I will agree that we may have earned the privilege by virtue of
demonstrating Morse Code proficiency, passing technical exams, etc.
But a right ? Sorry, don't think so.......

Can you indicate where transmitting on amateur radio frequencies is
protected in the Bill of Rights ?

Just curious,

Well David, the following excerpt is from one of your pages on the World Wide Web per the references at the end of your posting....allow me to quote from it --

"Welcome to the Invisible Disabilities Page! This page is aimed to those of us who have diseases, disorders and disabilities that aren't visible to most people and are misunderstood, or even met by hostility by society at large. As a hearing-impaired, vision-impaired person with ADD, I have had plenty of experience (too much) from this perspective. While there are many good disability pages, some of which I've included here, none have spoken from this view. This page is for all people with disabilities who want to understand each other a bit better without falling for the stereotypes so often held against them by others within the disabled community, and society at large."

(I quoted quite a bit in order to keep it in context)

Now I would expect that someone as sensitive as you seem to be about "stereotypes" would not make broad based statements like you did in your original post. I consider myself a "conservative", and I certainly believe in Family Values and Personal Responsibility [some would say that I flagrantly flout both of those, I'll plead guilty to being proud of my beliefs]. However, I think that it is irresponsible for you to correlate the behavior of a few miscreants on 75 meters with those of us who are politically conservative. In fact, I think it is as downright dangerous and insidious as the stereotyping you speak out against on your web page. Makes you seem a bit hypocritical.

>
> Starting from confrontation, "You're being an a**hole. Stop it.
> NOW." all the way through physical violence and crashing their towers
> through the roofs of their houses.

I'm not sure what namecalling and confrontation serve except to lower you to their level. But to each his own, I suppose. As far as threatening physical violence and damaging property, I would suggest

that you be a little more careful before making those sorts of statements. Just some advice; I'm not a lawyer and I don't play one on TV :-) Given how NETNEWS articles are archived and are easily searchable/retrievable, this seems sort of brash. It could even come back to haunt you in ways you can't imagine now. If you feel that your disabilities may excuse any unlawful behavior on your part, then I think that you're living in a dream world with respect to the justice system.

Finally, I believe that it is a violation of FCC rules to willingly damage radio equipment or interfere with communications (I may be wrong on that, but I'm referring to something which used to be printed on the back of my FCC 1st Class Commercial Radiotelephone license certificate, which may no longer apply or be relevant to Amateur Radio licensees). It certainly seems contrary to the spirit of Ham Radio. It is contradictory to me that you would break one set of laws to somehow try to redress someone's offenses according to another set of rules. Don't like what these lids are saying, then turn off the radio or tune to another frequency. There's still lots of amateur spectrum left, at least till the frequencies are sold to commercial interests.

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #193 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 13-Dec:
-
1. Amateurs in Vermont to Decide on Recall of ARRL Section Manager
2. Re-entry of OSCAR-13 Not Confirmed by NORAD or Other Sources
3. Phase 3-D Tests Progressing, IHU Installed and Operational
4. ARRL Announces W1AW Schedule Changes after First of the Year
5. Italian Amateur Starts Mir Fan Club, Offers Packet Info
6. FCC Continues Pouring Through Gate 2 Vanity Applications
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Special Event to Activate DC for Upcoming 10 Meter Contest
9. "This Week" Seeking Special Feature Producers/Commentators
10. Special Event Station Calendar
11. TV and Computer Manufacturers Reach Digital Hi-Def TV Accord
12. FCC Approves Third Party Agreement for American Ham on MIR
13. Weekly Propagation Forecast
14. "The RAIN Dial-up" from Chicago
15. AMSAT and SETI League Announce Plans to Affiliate
16. New ATV Altitude Record Set in Nevada Desert on 2417 MHz
-
Funding for the program's transmission and production expense was
provided this week by a grant from the AREC Repeater Group of West
Palm Beach, Florida, where "This Week in Amateur Radio" is heard on
the KF4ATQ repeater, on 146.67 MHz, serving West Palm Beach,
Ft. Lauderdale, Lake Worth, Lighthouse Point, and Delray Beach.
Presentation of "The RAIN Dial-up" was been made possible by a grant
from Dan Swee, N0FKM, of Columbia Heights, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
```

VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

I don't remember anything on the Tech or Novice exams which covered CTCSS or DTMF signalling. I doubt the other exams (General/Advanced/Extra) cover them either.

I really hate it when people "welcome" new hams like this...

CTCSS (Continuous Tone Coded Squelch System) aka PL (Private Line) aka CG (Channel Guard) aka TSQ (tone squelch) and aka a few others I can't remembe, is a system in which subaudiable tones are sent/received by radios to access repeaters, or to keep things quiet(er) when using simplex coms. Enough repeaters require CTCSS that you shouldn't consider a radio without it. Decode is a nice option that many hams don't bother with, but if you've got repeaters in your area that pass (or regenerate) PL, it makes listening more enjoyable (less noise, squelch tail elimination, etc).

Sub-audible tone scan is a function of radios with a PL decoder that is capable of scanning for the appropriate tone.

DTMF paging is just that, a paging system that employs DTMF (touch tone) to open the squelch.

Multi-band vs. single band... depends on your area and desires. In my area (Central Coast of California), there are almost as many open 440 machines as there are 2m machines. I couldn't live without it. In other areas, you'd likely be better off with 2m/220, or maybe 2m/1.2GHz...

Welcome to the hobby!

Bonjour from Bordeaux France.
To repare an AILTECH Synthesized Signal Generator reference 380KII,
I am looking for either a mauual or a copy (schematics) , for the main
frame (Power supply
problem).
I have the manual for the plug in, ref P3602 OE1 183, but I also need
the manual for the fm
modulator option.
Many thanks if you can help me.
Roland, F6ANF.

>How would you build a cheap station? I'll take suggestions on anything:
>transceivers, power supplies, amplifiers, receivers, transmitters, antennas,
>ground system, antenna supports, station layout, homebrew, whatever.

Well, back when I was a pup, Haliburton Well Services was updating
the two way radios in their fleet of oil field service trucks to
40Ds and donated their old radios to our local ham club. For the
price of a few gallons of degreaser and a pair of crystals, I had
a mighty Motorola 5V riding in my trunk crystaled for the first
2m repeater in Kentucky.

A few months ago, the TV station finished converting from 2 way radios
to cellphones, and I got 5 110 watt UHF GE Mastr IIs dumped in my lap.
They went to good homes for free too.

Now everyone isn't going to be so lucky as to have free radios dumped
in their laps, but commercial 2 way radios are plentiful on the surplus
market. And they're very cheap, usually under $50. Add $20 for crystals,
a buck or two for the parts to make a 1/4-wave antenna, and you're in
business with a radio that's much better than anything made by the
amateur manufacturers.

Now it is a wee bit harder to find surplus gear that works down near
DC, but I did pick up a couple of 1 kW SSB rigs at the Eastern Airlines
bankruptcy sale for $20 each. Fortunately I was able to borrow a forklift
to get them in the truck. Nice big CCS linears, but the transceivers
weren't much to write home about (12 fixed channels). I sold the
transceivers for $25 each, so now I've got two nice big linears and
$10 in my pocket. Not bad.

While they had the forklift out, they twisted my arm and made me
take two 1 kW plate modulated VHF AM transmitters too. I don't know
exactly what I'm going to do with them, but they should make dandy
Class C 2m FM amps. :-)

I've still got those 8 PE HTs sitting over there in the gang charger
that I got for $15 *total*. One of these days I might buy some crystals
to put them in the ham band.

And then there was the chain of stereo shops who went bust. I
bought 30 Astron 20 amp power supplies (used to run their auto
radio displays) from them for $300 total. Those all sold in a

couple of hours to the local hams for $20 a pop after I put the word out on the repeater during the drive home. (Hey, making $150 an hour ain't bad.)

There's no lack of cheap equipment available, as long as you don't insist it be made in Japan, be 2/3 Gameboy, 1/3 scanner, and almost useless as a 2 way radio.

You may think it is outdated, but this morning The Discovery Channel was having Technical Difficulties. The Pix was scrambled, and the audio feed was a CW identifier that went like this :

DE EVI030203956371 WCI1234045/

If CW is so outdated, could someone explain why a Sattellite based programmer such as The Discovery Channel with shows like Next Step, Beyond 2000, and Cyberlife, choose to indentify their transponder with CW?? :)

Long Live CW. I use it and it is my mode of preference. Even up in the VHF/UHF bands.

It used to be DMV form 441 -

The vanity plate computer system will reject anything that looks like a ham call - just its way of being friendly. Ham plates are done using a different form. (Besides, vanity plates cost you $$ every year where ham plates are a one time charge.) You'll need a copy of your license with you.

Remember to be patient - you can't push a piece of string.

Umm, actually, no offense, but I use pre-sort bulk mail labelling software
all the time. No work necessary. Feed it a .dbf file, out comes pre-sorted
labels with postal bar code on the nice laser forms.

>On a normal day of billing, for our little business, our secretary
>will end up working all day on getting our billing printed, stuffed,
>SORTED (yep, one of the requirements for bulk rates is it must be
>sorted by area code) run through the postage meter, and taken to the
>post office.

How many of these do you think Maia is doing a day?

A ham license is good for 10 years. There are 700,000 hams. How many
renewals are there, on average, each day?

Well, there are 365 days per year (not counting leaps). Over 10 years
that is 3650 days. That calculates to about 200 renewals mailed each
day.

At $5/hr for someone to stuff envelopes, they can easily do 2 a minute.
That's 120 per hour, or about 4 cents to the cost of each mailing.
Slap on the stickers, and away you go.

I believe my original estimate is more than accurate.

>And what in the devil is wrong with that? I am not going to work all
>day without making a profit!

If Fred is doing it for a service, he shouldn't be making a "profit".

I figure Icom and others are running a hell of a scam here. They get this law passed, then they sell two versions of the receiver. They still have to be very competetive on the price of the regular "civilian" model that's availible everywhere, but the sky's the limit on the "government" model. Anybody know what the price differential turns out to be? I'll bet very few government agencies ever buy the blocked model, even if they are never going to use the 800 Mhz band. Your tax money at work.

Yup Gary, if CW is such a superior mode, why are CW contacts given
an unfair point advantage on field day? We have a serious case of
discriminatory mode-ism in amateur radio.

2877. Diesel Generators: A few questions...

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-08 00:00:00 UTC
From: jholt@ziplink.net
Message-ID: <58fg53$3g4@news.ziplink.net>
Source record: 210782

Good day.

Having just suffered through most of a weekend without power (due to a nasty November snowstorm), I suddenly found motivation to look into getting a diesel generator.

Follow my thoughts: Gasoline is dangerous, spoils, gums up carbs. A diesel engine can burn oil from my oil tank, is pretty safe, and is pretty reliable.

I figure that I can put a valve on my oil line from the 200 gallon oil tank, and attach fifty feet of fuel line hose. I can mount a 20 or 30 kw genset on a small trailer, and when an outage hits, I can pull the genset out of the warm garage with the garden tractor, and crank it up in the driveway.

I saw a 30 kw genset with a Detroit Diesel engine (rebuilt engine, new genset) for $5000 delivered (Harbor Freight Tools).

Is this a good idea?

Is this a good deal?

Who makes commercial quality gen sets? Cat? Kohler? Detroit? Can you get one of these makes for not a lot of money? Are there any catalog outlets that sell these things?

How many gallons per hour do these things burn?

If you calculate the total load on a genset (120 V * total amps), how much overcapacity do you need to handle start up surges, and keep the genset running in a reliable fashion? I don't want to tax the genset. I'd rather keep the set loafing along under load. We just want to run two fridges, a freezer, two furnaces, a water pump, and a couple of lamps.

Currently relishing hot, running water, and heat.

Hear is another example of why NOT to join the ARRL. They seemed to have polled their members and what do you know, they found they all what to retain CW as a filter for access of HF freqs....Could it be they only speak for those who are generals and above. Look at any issue of QST. Ever notice who most articles are written for. The fact is that the so called no code tech out number all other class license combined. I guess amateur radios "red headed step children", us no coders, need to find a new outlet for recognition. One that when address the real voice of amateurs. There is already a magazine dedicated to operations of VHF.
Hey CQ VHF magazine, are you up for the task as the voice for the majority of amateur operators.

THE IS THE LATEST PROUD ARRL CRY OF VICTORY
****
"In a recent survey conducted by the American Radio Relay League, amateurs have made their feelings known. In over rousing fashion, amateurs have said yes to the retention of morse code. Sixty two percent of ARRL members polled said yes to keeping the code. While thirty percent said no. Of all amateurs polled, members and non-members alike, Fifty four percent said yes to keeping the code, while thirty seven percent said no".

"In this era of the popular no code tech license, amateurs say no to the total no code licensing".

"The bottom line. In months passed some high ranking officials have publicly hinted that the ARRL might not be opposed to expansion of privileges for no code hams. As a result of this survey, when the League goes to WRC '99, it will have to stand its ground. It will be forced to say no to those administrations whose telecommunications leaders say that its time to delete the Morse code as a testing requirement for getting ham radio voice operating privileges on bands below 30 MHZ".
****

The ARRL can expect no renewal from me.

Or get an old TV and ask Jeff in Hawaii how to modify it into a free ham station. It definitely can be done. W5OLV (SK) gave me enough stuff from the junkbox at his radio/TV repair store to get me on the air for absolutely zero cost in 1952 and I only lacked a couple of states for WAS one year later, all done at one frequency on 40m.

Hey Dean, you stole my argument against Morse code testing. Morse code testing is expensive (lots of wasted time for people who are not going to use it) and destructive (keeping the brightest potential hams out of ham radio). My home town still has a law that says one must call the sheriff before driving to town in a horseless carriage. It sure reminds me of the Morse code testing requirement - something just left over from a past (now irrelevent) good idea at the time.

I don't know how many no-coders are also ARRL members, but if our club is representative, I'd have to say a very low percentage.

If that's the case, then it's a supply-and-demand situation. If the core of ARRL membership is General and above, and I suspect that's the case, they would get a lot of heat for publishing articles that didn't address their readership.

I do have to give the publishers of CQ Magazine credit for filling a need with CQ VHF Magazine. Although my main operating interests are on HF, I am a subscriber to CQ VHF, and it's one of the first ham magazines that I read each month.

If you look at CQ, 73 and World Radio, you'll find that there are very few articles aimed at the VHF frequencies and above; it isn't just QST.

Where do you get the statistics to support your assertion that Technicians outnumber all other classes of operator, combined? I'd give you that they are the fastest-growing segment of the ham population, but c'mon...

I'm not a staunch ARRL supporter, but I will say that quitting is not the answer. It doesn't matter how many Technicians there are out there, if they aren't ARRL members, they're not going to influence League policy. As a member, at least you have a voice, for whatever that may be worth.

The whole POINT of this thread was to do a little research on "the situation" . . . or perhaps that point was missed.

> My guess is that all this rubbish about "cleaning up" 3894.5 will go
> about as far as the pink plump rumps of these little puritans ever
> venture from their keyboards.....not too far.
>

Probably true, this won't end in the "cleaning up" of the frequency, but it will at least increase the public awareness among hams (little lemmings, I think you said...) who are unaware, or unable to catch up on the situation. Furthermore, as I mentioned before, do you have anything CONTRUCTIVE or HELPFUL to say, or are YOU satisfied to sit on YOUR "pink plump rump" (which is probably neither "little" nor "puritan[ical]" and hide behind your keyboard passing useless criticism.

Now THAT was what I call an informational posting. Thanks for the "scoop" on who's who down there. I printed your posting out, and listened in on the freq again, and it all makes sooooo much more sense now. And yes, that was the call I heard, at least, I can confirm that those were the letters used, and used in that sequencee, but as to who the hell was using them, I haven't a clue. Hell, I heard some guy up on the top band about 3 weeks ago identifying (consistantly, in QSO's, and to people he was talking to, it was hysterical) as WWV. People were coming back to him saying "What, A2WWV ???" and he would reply "No, this is WWV, do you know what time it is?" Anyways...listening to those folks I would believe that they just pull calls out of the air.

Pete

*** The `Linux AX25 HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

14.3. Starting ax25d

When you have the two configuration files completed you start ax25d
with the command:

# /usr/local/sbin/ax25d

When this is run people should be able to make AX.25 connections to
your Linux machine. Remember to put the ax25d command in your rc files
so that it is started automatically when you reboot each time.

14.4. Configuring the node software.

The node software was developed by Tomi Manninen
<tomi.manninen@hut.fi> and was based on the original PMS program. It
provides a fairly complete and flexible node capability that is easily
configured. It allows users once they are connected to make telnet,
netrom or telnet connections out and to obtain various sorts of
information such as Finger, Nodes and Heard lists etc.

The node would normally be invoked from the ax25d program although it
is also capable of being invoked from the tcp/ip inetd program to
allow users to telnet to your machine and obtain access to it, or by
running it from the command line.

14.4.1. Creating the /usr/local/node/node.conf file.

The node.conf file is where the main configuration of the node takes
place. It is a simple text file and its format is as follows:

# /usr/local/node/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.
```

```
# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports 70cm 2m

# Callserver
# If configured the node provides users with access to a callserver.
callserver zone.oh7rba.ampr.org

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800

# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"
```

14.4.2. Creating the /usr/local/node/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or

NetRom to use the (C)onnect option, but prevent others, such as
those who are telnet connected from a non-local node from having
access to it. The second field therefore allows you to select
which access method this permissions rule should apply to. The
access methods allowed are:

```
method description
------ ------------------------------------------------------------
ax25 User connected by AX.25
netrom User connected by NetRom
host User started node from command line
local User is telnet connected from a 'local' host
ampr User is telnet connected from an amprnet address (44.0.0.0)
inet user is telnet connected from a non-loca, non-ampr address.
```

port
For AX.25 users you can control permissions on a port by port
basis too if you choose. This allows you to determine what AX.25
are allowed to do based on which of your ports they have
connected to. The third field contains the port name if you are
using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users
to enter a password when they connect. This might be useful to
help protect specially configured users who have high authority
levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

```
value description
----- -------------------------------------------------
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
```

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /usr/local/node/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 127

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 31
* netrom * * 31
* local * * 31
* host * * 31
* ampr * * 31
```

14.4.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[VK2KTJ-1 VIA VK2KTJ-0]
default * * * * * 0 root /usr/local/bin/node node radio
```

This simply says that all users who connect to VK2KTJ-1 on the same device (by the same port) as VK2KTJ-0 should cause the node program to be run with the name of the port they have connected via, in this case you will recall the /etc/ax25/axports specifies the port name as radio that supports the callsign VK2KTJ-0.

14.4.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 4000/tcp #OH2BNS's node software

and to /etc/inetd.conf you should add:

node stream tcp nowait root /usr/local/bin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 4000 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

```
14.5. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who
connect to be log in to your machine. It is invoked from the ax25d
program as described above. To allow a user to log in to your machine
you should add a line similar to the following into your
/etc/ax25/ax25d.conf file:

default * * * * * 1 root /usr/local/sbin/axspawn axspawn %u

If the line ends in the + character then the connecting user must hit
return before they will be allowed to login. The default is to not
wait. Any individual host configurations that follow this line will
have the axspawn program run when they connect. When axspawn is run it
first checks that the command line argument it is supplied is a legal
callsign, strips the SSID, then it checks that /etc/passwd file to see
if that user has an account configured. If there is an account, and
the password is either "" (null) or + then the user is logged in, if
there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

14.5.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the
/etc/ax25/axspawn.conf file. This file is formatted as follows:

# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
```

```
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

```
guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.
```

```
group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.
```

```
first_uid
this is the number of the first userid that will be
automatically created for new users.
```

```
max_uid
this is the maximum number that will be used for the userid of
new users.
```

```
home
this is the home (login) directory of new users.
```

```
shell
this is the login shell of any new users.
```

```
associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.
```

14.6. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to

the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.6.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/sbin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.6.2. Create the /usr/local/pms/motd file.

The /usr/local/pms/motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.6.3. Create the /usr/local/pms/info file.

The /usr/local/pms/info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.6.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine.

You make this association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine, so any mail for vk2ktj on the pms will be sent to terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

14.6.5. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.
14.6.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/local/bin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that

user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

15. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

15.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

16. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

ax25
contains the AX.25 port configuration information.

ax25%lowbar;bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

ax25_route
contains AX.25 digipeater path information.

nr contains the NetRom port configuration information.

nr_neigh
contains information about the NetRom neighbours known to the NetRom software.

nr_nodes
contains information about the NetRom nodes known to the NetRom software.

17. Walking on the wilder side .. the developmental software

If all of the above doesn't satisfy your desire to push the limits there is plenty more for you to play with.

There have a been a number of enhancements that are available as experimental software for you to try. They come either as patches against the 2.0.* kernels, or in the alpha 2.1.* kernels.

Be warned though, this software is new, pretty much untested and likely to contain bugs. If that worries you, then ignore this section of the document.

17.1. Enhanced versions of just about everything.

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler.

all drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin etc now present a normal network interface, that is they now look like the ethernet driver does, they no longer look like KISS TNC's. A new utility called net2kiss allows you to build a kiss interface to these devices if you wish.

bug fixed
there have been many bug fixes and new features added to the drivers and protocols.

To take advantage of the features of the 2.1.* AX.25 support you must use the new ax25-utils package. You shouldn't use a kernel older than 2.1.9 and you should use ax25-utils-2.1.9a.tar.gz which is available from Jonathons home site.

17.2. ROSE Packet Layer Support

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>. You will need ax25-utils-2.1.9a.tar.gz to configure the rose interface.

17.3. Soundcard DSP based modem

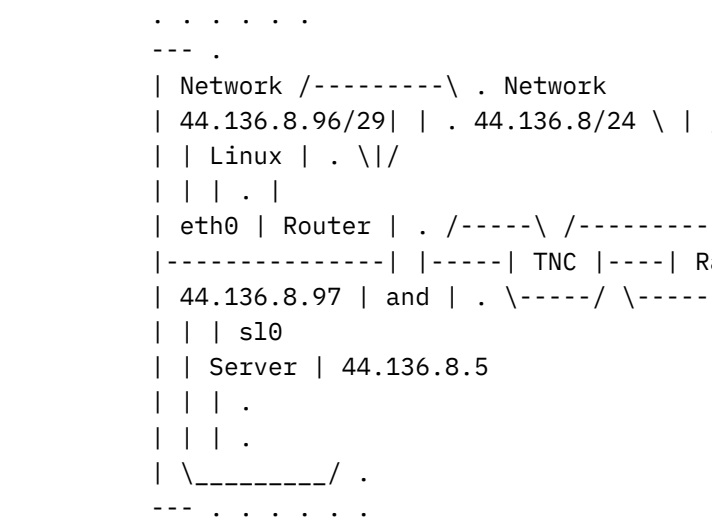
Thomas Sailor has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet!

18. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

18.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"
```

```
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```
18.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/
| 154.27.3.20 | Gateway | . \-----/ \----------/
| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
```

```
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"
echo "#"

19. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.2, 26 November 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Added 'node' configuration.
Added 'mkiss' configuration.
Added warning about -assoc 'root' - thanks Jonathon.
The files in /proc.
The alpha software.

Corrections/Updates:
Corrected Baycom MAJOR - thanks John.
Corrected ax25d mode specification.
Updated ax25-utils.
Updated z8530 SCC.
Fixed munge sample output - thanks Ron.
Fixed BPQPARAMS - thanks Petteri.
Updated and added the setbaycom utility.
```

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Finally Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC

based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 2.0.xx kernel source.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

It is stronly recommended that you upgrade to the most recent 2.0 kernel. Jonathon specifically recommends not using a kernel less than 2.0.12 for AX.25 purposes as some minor bugs were fixed in that and later versions.

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at their home site:

Jonathon Naylor's Pages <http://www.cs.nott.ac.uk/~jsn/>

or by ftp from:

ftp.cs.nott.ac.uk

/jsn/ax25-utils-2.0.12a.tar.gz

or:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.12a.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-2.0.25.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please

make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Prompt for development and/or incomplete code/drivers [Y/n] Y
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

The tools compiled cleanly against a 2.0.0 kernel without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# gzip -dc ax25-utils-2.0.12a.tar.gz | tar xvvof -
# cd ax25-utils-2.0.12a
# ./configure
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
```

call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)

then you should read the README.ncurses file in the top level directory. You can do as Jonathon suggests in the INSTALL file, or you can try replacing:

#include <curses.h>

with:

#include <ncurses/curses.h>

in the:

call/call.c
call/menu.c

files.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure it to work as a `vanilla' AX.25 interface with no TCP/IP. The following configuration will get you to the point of being able to make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode or with other cards such as the Ottawa PI2 card, PacketTwin and other SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create an AX.25 port ready to use to make outgoing calls. For other types of hardware you need only complete the first step.

6.1. Creating the /etc/ax25/axports file.

The AX.25 ports have a configuration file that is read by many programs that want to find information about an AX.25 port. This file is called the:

/etc/ax25/axports

file. The format of the file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

In it simplest form you can use the axattach program as follows:

/usr/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS0 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /etc/ax25/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for 8530 SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin
section for the names of the network devices to use.

6.2.2. Testing the interface.

You now should be able to make outgoing AX.25 connections. To test
AX.25 connected mode you could use the call program as demonstrated:

/usr/bin/call radio VK2DAY via VK2SUT

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man and the README file in ax25-utils-2.0.12a distribution for more information.

6.3. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devies that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial device.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/axattach /dev/ttyp0 port1
# /usr/sbin/axattach /dev/ttyp1 port2
```

would create two tty devices: /dev/ttyp0 and /dev/ttyp0 that each look like a normal single port TNC. You would then treat /dev/ttyp0 and /dev/ttyp1 just as you would a conventional serial device with TNC connected. This means you'd then use the axattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use axattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name callsign alias paclen description

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 235 Linux Switch Port

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If
you do not have an entry in /etc/ax25/nrbroadcasts for a port
then this means that no NetRom routing will occur and any
received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create the NetRom device in much the same way as you did for the AX.25 devices. This time you use the nrattach command:

```
# nrattach netrom
```

This command would start the NetRom device (nr0) named netrom configured with the details specified in the /etc/ax25/nrports file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the NetRom routing broadcasts. You start NetRom with the command:

```
# /usr/sbin/netromd
```

You should soon see the /proc/net/nr_neigh file filling up with information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that it is started automatically each time you reboot.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card, and executed
configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

If you don't actually want to run tcp/ip on your ethernet device then
all you need to do is use the:

```
# ifconfig eth0 up
```

command to activate the interface.

To configure the BPQ support you need to associate an AX.25 callsign
with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0
device. Note you should never associate a callsign with the root
account as this can cause configuration problems in other programs.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4.dl1bke.tar.gz 2.0.* z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is

these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for

the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector

```
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
```

```
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be

sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit buffers. The arguments is in bytes and represents the total length of the frame, so it must also take into account the AX.25 headers and not just the length of the data field. This keyword is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced Par97 parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de>.

When the driver is running it follows the standard of looking like a
KISS interface, so you treat it in much the same way as you would the
PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled
module support into your kernel, and also selected the appopriate
options to support the Baycom driver during the make config stage when
compiling your kernel.

The relevant options that you must answer `Y' for are:

Prompt for development and/or incomplete code/drivers [Y/n]
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Compiling the setbaycom utility

A configuration utility is available available from Thomas Sailer's
home page <http://www.ife.ee.ethz.ch/~sailer/ham/baycom.tar.gz>. The
setbaycom utility allows you to configure multiple Baycom devices. If
you intend to do this then you should obtain it and install it.

To compile and install, do the following:

```
# cd /usr/src
# tar xvfz baycom.tar.gz
# cd baycom
# make
# make install
```

13.3. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

```
# mknod /dev/bc0 c 51 0
# mknod /dev/bc1 c 51 1
# mknod /dev/bc2 c 51 2
# mknod /dev/bc3 c 51 3
```

You will use these later. If you installed the setbaycom utility then
this will have been done for you.

13.4. Loading the module.

When the kernel compilation is complete and you have installed the
module baycom.o wherever you normally keep your modules
(conventionally they are stored in /lib/modules/2.0.0/), you must
start the module. The module takes configuration paramters from the
insmod command line, so you must start it manually from an rc file or
if you use the kerneld program you must configure it with the relevant
paramters so that it supplies them when it loads the module.
If you use kerneld you will need to add the following line to your

/etc/conf.modules file:

alias char-major-51 baycom

There are four main items to specify when loading the module, they
are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.5. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your
machines, and because it is a low level driver for these, it competes
with the existing serial and parallel drivers in the kernel. There are
some ways of working around this problem. The first way is to make
sure that you load the Baycom module first so that it takes the
hardware it needs before the serial or parallel device driver modules
load and search for their own. With the serial driver you have the

luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.6. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.7. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. The setbaycom utility allows you to configure multiple Baycom devices.

The command line arguments needed are identical to those you'd supply to the module if you were configuring just a single device. For example, to configure both of the devices presented above you would use the commands:

```
# setbaycom -i /dev/bc0 -p ser12 0x3f8 4 1
# setbaycom -i /dev/bc1 -p par96 0x378 7 0
```

13.8. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /etc/ax25/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/Netrom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they

can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.
u/U
UTMP - currently unsupported.

v/V
Valid call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments specified.

<cmd-name>
is the text that should appear in a ps as the command name running (normally the same as <cmd> except without the directory path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

You need one section in the above format for each AX.25 or NetRom
interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the
string `defaults' and other starts with the string `default' (yes
there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `defaults' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The
`default' line is what sets those default values. The kernel software
itself has some defaults which will be used if you don't specify any.
The trap is that the these defaults apply only to those rules below
the `default' line not to those above. You may have more than one
`default' rule per interface definition, and in this way you may
create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-0]
NOCALL * * * * * L guest /usr/games/fortune
#
defaults 1 10 * * * * root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 * root /usr/local/bin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my
machine with the callsign VK2KTJ-0 will have the following rules
applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default
parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults
(Window and T1) and will run the /usr/local/sbin/axspawn program for
them. Any copies of /usr/local/sbin/axspawn run this way will appear
as axspawn in a ps listing for convenience. The next two lines
definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-0 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

If you wanted to define rules for another interface, a NetRom interface for example, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package that you should look at if you need more information.

*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.4.1.tar.gz>
or from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.
Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like

mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?
Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-
Windows? Does it need a soundcard? Does it need a certain
version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece
of software as this would consume a lot of time reading and
trying to keep up to date. So instead what I'd like to list is
what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.2, 10 October 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
cw2hex - a program to assist in making keyer eproms

Corrections/Updates:
Fixed XNet web site details, ooops, thanks Carl.
Many minor smgl syntax fixes.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite.

The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper
Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor,
G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.
The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is
suitable), a VHF-FM receiver that can tune to 145.825 MHz, a
small yagi antenna, and a communications program such as Minicom
that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through
a terminal program, error checks the received data, and applies
calibration equations to the received data to produce a report
that can be easily understood and analyzed. uo11 comes pre-
compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

cd /
tar xvfz uo11.tgz

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.
Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via

the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.

Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by
email.
Licensing/Copyright
You may copy this program millions of times, the only

restrictions are:

- You may not charge ANYONE for the program itself.

- You may not distribute modified versions of the program.

- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan manager could use to analyze and manage traffic. The tools present a graphical view of all of the traffic received at the monitoring node allowing the observer to easily see where the traffic flows normally and other information such as:

- Packet counts

- Node statistics

- Network Utilisation figures

The network is displayed with icons representing hosts and lines between them representing the traffic flow. The graphical display provides an instantly absorbable view of the traffic on the network being monitored. Richard has more information and sample displays at: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.2. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.1, Stable

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/monax25-1.1.tar.gz>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.3. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you

use the splitscreen program to access services like convers

Where and how to obtain it
The splitscreen package is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/splitscreen-1.4.1.tar.gz>

Licensing/Copyright etc.
Public Domain

5.4. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional
Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/talk-ax25-960426.tgz>
or from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/talk-
ax25-960426.tgz>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be
retained.

5.5. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary
files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them
to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The 7Plus encoder is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/7pl217sr.tgz>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.6. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.7. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the

desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.8. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.9. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.10. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

- It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

- The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at

multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog programs).

• clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises the following modules:

```
con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
```

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

• The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

• A console monitor to watch ongoing activities

• Speed optimization

• An internal clx protocol

• An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

• 00Index

• clx_200.tgz

• install.clx

• README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.11. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU, wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS, DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de
Description
A suite of programs that provide BBS and Terminal programs for Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.12. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation

gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.13. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps

directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.14. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.15. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.16. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the configuration of your system at all. If you have root access on your machine then you run the program in a VT or in an XTerm and it will clear the screen and wait for an incoming connection on

port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.17. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and
convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

```
# cd /usr/src
# tar xvfz ttylinkd-0.02.tar.gz
# cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
# make
# cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
# killall -1 inetd
```

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. cw2hex

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.

Status
version 1.1 is tested and ready to go.

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.2. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.3. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.
System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or

the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

6.4. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/oscope-1.0.tar.gz> or from its home site at: www.bobsplace.com <http://www.bobsplace.com/~twitham/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Patrick:
Despite all the good information you're getting, I suggest that you not walk, but run to your phone and call PolyPhaser and ask them for some of their information on lightning protection and grounding. You can also find them at www.polyphaser.com. Even if you don't shell out the bucks for their relatively expensive solutions, you owe it to yourself, you family, your neighbors, your landlord and your insurance company to get the information and read it.
The reason I suggest this is because lightning protection and grounding is not a 5 minute solution, it's something thats going to take some effort to learn and impliment. If you do it wrong, you might as well not do it at all.
A friend of mine learned the hard way. He had a repeater antenna on top of a 50' tower behind his house. He had the tower "grounded" but still lost every piece of electronics in the house and his entire heating and cooling system. Fortunately there was no fire and nobody was home.

Chuck

3894.5 has been a hotspot for about 15 years. I happened on to it when I was
first licensed in '81. At that time it was entertaining, and nothing more.
since then it has gone downhill drastically

SB DX @ WW $OPDX.282A
Ohio/Penn DX Bulletin No. 282A

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 282A (Part 1)
BID: $OPDX.282A
December 9, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DXCC Desk, WB2RAJ, K3IXD, K4UUE, K1ER/KH6, K7WX, KU9C, W9UI, 9K2HN, 9M2/G3NOM, CX8DX, G3SXW, G4BUE & DX News Sheet, HB9CYN, JH2PDS/1, VE7AHA and VE9AA for the following DX information.

5V7A WRAP-UP. Rodger, G3SXW, reports the team from Togo as 5V7A in the CQ World-Wide CW Contest yielded 12,200 QSOs. On November 21 and 22, personal callsigns were used while testing antennas. QSL personal callsigns via their home callsign. Direct QSL requests to GM4AGL for 5V7A were being answered within one week after the contest. They are also accepting E-mail requests for bureau replies at the following Internet address: 100260.342@compuserve.com. Please do not send by more than one route as this causes unnecessary duplication of effort and cost. Full details of the expedition and QSLing can be found on their home page at: http://www.getnet.com/~kf7ay/5v5a.html
Rodger states, "The trip was a great success and we thoroughly enjoyed West Africa again, travelling through Ivory Coast and Ghana to reach Togo. We were delighted with propagation conditions and with our hotel QTH. Look for yet another big effort next November." ALSO, read 9G.

8P, BARBADOS. Ralph, K2PF, and Steve, KU9C, will be active from December 12-17 as 8P9GE and 8P9GD, respectively. They plan to operate in the 10 meter contest and other bands before/after the contest. They will look for openings into the Pacific Rim around 2100-2300z daily on 20 or 30 meters CW. They will also be active during RS-12 passes if you need a satellite QSO. QSLs go to their home calls via the CBA.

8Q, MALDIVE ISLAND. Chris, HB9CYV, and Martin, HB9CYN, will be active from Bandos Island from December 19th through January 1st (1997). Callsigns to be used: 8Q7YN (Martin) and 8Q7YV (Chris). Their activities will be mostly CW, also SSB and maybe RTTY. Operations will be on all bands 80-10 meters (including the WARC bands). Equipment will be a TS-50, 100W with wire-antennas. They will try to build a 160m-dipole depending

on the local's environment. QSLs via bureau!! (8Q7YN via HB9CYN, 8Q7YV via HB9CYV), or direct to HB9CYN via callbook-address. HB9CYV is NOT via callbook but to Christian Zeller, Jaegerstr. 19, CH-8200 Schaffhausen, Switzerland, Europe.

9G, GHANA. The "DX News Sheet" reports Marcia, (xyl of John, 9G1BJ), is active again for the next two years from Tamale as 9G1TM. She will be operating on SSB only, mostly on 20-10 meters including WARC bands. QSL via G4XTA.
Meanwhile, during November 15, 26 and 27th, Roger, G3SXW, made 817 CW contacts, mostly on 15 and 17 meters as 9G5SX transmitting through Accra for the 5V7A project. QSL via G3SXW. He also states that the Ghana Amateur Radio Society warmly welcomes any guests at their club station. Call Ralph, 9G1RQ on (+233-21-)779767.

9K2, FAYLAKA ISLAND (Kuwait). The DX group of the Kuwait Amateur Radio Society is currently organizing a trip to this Kuwaiti island. The operation will be from December 18-27th, using the assigned callsign 9K2F. Faylaka Island has an IOTA number of AS-118. All QSL cards should go directly to 9K2HN: Hamad J. Al-Nusif, P.O. Box 29174, 13152 Safat, Kuwait.

A6, UNITED ARAB EMIRATES. It has been reported that Ali, A61AJ, and Abdul, 9K2GS, have been showing up regularly on 14200 kHz at 0330Z beaming long path for the Pacific. John, K1ER/KH6, reports they are very loud into Hawaii, but perhaps those on the coast (west probably he means) could hear them if they were looking. 9K2GS is fluent in English and assists Ali in getting the callsigns correct.

ARE YOU IN THE LOG? The XZ1N team has returned from Myanmar and has received many, many requests for a check to see if "I'm in the log." Their QSL Manager, W1XT, has offered to help in this regard. If you want to check and see if you're in the XZ1N log for a specific QSO, you can send E-mail to: xz1n@qrz.com The SUBJECT line should read: XZ1N LOG CHECK
The BODY of the message should have the following information for each QSO:

Your call sign
Band
Mode
Date
Time in GMT

They ask one favor. If you had a solid contact, please do not make an "am I in the log" request, just send them your card. All of your contacts with XZ1N, every band and each mode, will be listed on the QSL card you receive from them. This log check should be only for ops who may have had the XZ1N side of their one and only QSO with them lost in QRM/QRN and just want to be sure. With over 23,000 QSOs, they hope that they're not opening a Pandora's box with such an offer. Regular QSL route: Bob Myers, W1XT, P.O. Box 17108, Fountain Hills, AZ 85269-7108 USA. Cards will be printed in the weeks to come.

C6, BAHAMAS. Look for Tom, N6RA, to be active as C6AHF until December 19th from Harbour Island (off Eleuthera). His activity will include participation in the ARRL 10 Meter and 160 Meter Contests. QSL to home call.

CHANGE OF HANDS. "THE 59(9) DX REPORT" has expanded by acquiring the subscriber base of "THE DX BULLETIN" and "THE DX REPORTER" from Paul Smith, AE4AP. Paul has decided to concentrate his efforts on "THE DX MAGAZINE". All subscribers will now receive "THE 59(9) DX REPORT" as their weekly DX bulletin. Along with the 50 week full year subscription, a 25 week half-year subscription is available. Stateside subscribers can also select a less expensive full year Second Class (Periodical) rate. Besides checks, MasterCard and Visa are now available as a payment choice. "THE 59(9) DX REPORT" also has a Web Page for everyone to enjoy. Check it out at: http://members.aol.com/the599rpt/dx.htm For a sample issue and subscription information send a large SASE to: THE 59(9) DX REPORT, P.O. BOX 73, SPRING BROOK, NY 14140.

CV0, FLORES ISLAND (Uruguay). This Uruguayan Islands have an IOTA SA-030 and will be active December 13-15th, using the callsign CV0Z. Operators will be Bob, CX8DX, and other friends. They plan to be active on 160-6 meters SSB, CW, RTTY and SSTV. QSL via CX3CE CallBook 1996.

CY9, ST. PAUL ISLAND. Mike, VE9AA, states he has applied for a CY9 license and expects it will be a MINIMUM 3-4 week wait for the application to be reviewed. It took 2 or more months before they heard anything last time. He has also applied for landing permission. This will again be a DXpedition with one full time station on 6 meters (or a QSK/breakable beacon). It will also be an all band effort, 160-2 meters, inclusive. Operations on CW/SSB and maybe EME with some Meteor Scatter, but no satellite (That, they will leave to the pros like Don, VE1AOE). RTTY is doubtful but not ruled out entirely. The preliminary dates will be June 10-15th (subject to slight changes.) The operators are to include Doug/VE1PZ, Mike/VE9AA, and possibly VE1CZ. Mike states St. Paul won't be as expensive as Sable Island, but as always, the future of the CY9 operation hinges on whether or not they can get the needed funding, equipment, antennas, QSL cards, etc..... Nothing will be actually collected until licensing and permission are "in-hand". Sponsors are already being contacted and/or solicited for the CY9 adventure.

DXCC NEWS RELEASE. A release by Bill Kennamer, K5FUV, titled "XY0RR Status Update", in short states that the DXCC Desk's accreditation of the XY0RR operation "was based on evidence that the operators had made legal entry into the country, and possessed operating permission from the government of Myanmar." But, "recently obtained information has called this evidence into question."
"If the accreditation decision regarding XY0RR were to be made today, the operation would not be accredited based on presently available information. However, technical difficulties prevent removal of DXCC credits for this operation. DXCC participants whose credit for Myanmar is based on a contact with XY0RR are encouraged to make a replacement contact for their own personal satisfaction." ADDED NOTE: The full

news release will be sent to all OPDX InterNet Subscribers as an
additional bulletin.

HS, KOH CHANG ISLAND (Thailand). Ray, 9M2/G3NOM, reports a first time operation is planned to Thailand's second biggest island for the period of December 12-15th. Activity should start around 0500z on the 12th. Koh Chang will be a new IOTA island and is located in the Gulf of Thailand North East Group. It is 5km from the coast of Thailand at its nearest point. The DXpedition will be located on the west side of the island. It is approximately 2 hours by boat from the mainland. The island is 70% covered by virgin forest and mountains reaching 744 meters high. The population is approximately 5000 people. The DXpedition is being organized by Chamlong, HS1AAM, on behalf of the Radio Amateur Society of Thailand (RAST) to celebrate the 50th year reign of King Bumipol of Thailand. The special call sign HS50A will be used. The operators will be: HS1AAM, HS1CDX, HS2NS, HS2FDX, HS7ECI and HS0/SM3DYU, plus others. Operations will be on the usual IOTA frequencies on all bands 1.8 MHz to 30 MHz, excluding WARC bands (these are not normally permitted in Thailand). Active modes to be used: CW, SSB, RTTY, Packet, and possibly Satellite. QSLs cards can be sent to the Thailand Bureau, PO Box 2008, Bangkok, 10501, Thailand, or to the QSL manager/s who will be announced soon.

J3, GRENADA. The "DXNS" report Joe, WB8GEX, will be active beginning December 31st until January 7th as J3K. Activity will be from the Emergency Operations Center, mainly on SSB 80-10 meters. Equipment will be a a TS-440S, FL2100B and beam antennas and inverted vees for 80 meters. QSL to homecall. A 6 meter beacon, J3EOC, was successfully installed on October 27th during his last trip, and it operates on 50056.5 kHz with 1.6W.

K3VOA, DC SECTION, IN 10M CONTEST. The Potomac Valley Radio Club (PVRC), thanks to the hospitality of the Voice of America Amateur Radio Club, will again activate K3VOA for the rare DC section multipler in the ARRL 10 Meters Contest, December 14-15th. The multi-operator team (K3IXD, KD4QVT, N3NT, W3GHR, and WB3ECU) will be active on both CW and SSB. QSLs for this contest only go to K3IXD, CBA, SASE please.

P5, NORTH KOREA. An interesting article appeared in the December issue of the Japanese "Five Nine" DX magazine about Yasu, JH1AJT and Jun, JH4RHF's visit to Pyongyang, DPRK or North Korea during October 22-26th. The group was invited by DPRK-Japan friendship association. ADDED NOTE: Excerepts of the acticle were provided by Tomo, JH2PDS/1, and will be sent to all OPDX InterNet subscribers as an additional bulletin.

QSL INFO AND NEWS......
The J6DX info isn't new, but there is some erroneous/confusing info ciruclating with respect to where the QSL goes for which year.

J6DX - (all years) via N9AG, Scott Lehman, PO Box 803, Greenville, OH 45331
J68AR - K9JE (old US call K9BQL), Jack Ekstrom, 203 Juniper Drive, North Aurora, IL 60542 (new address)
J68AG - N8SM (old US call is WD8IXE)
J68ET - W9UI
J68ID - W8QID (old St Lucia call is J68AK)
J68NR - N8NR (old US call is WB8ENR; old St Lucia call is J68AE)

The crew reports they had a great time in St Lucia once again. They made about 7500 Qs in the CQ WW CW and about 12.2M points (M/S). They would estimate that another 10,000 QSOs were made under the 8 individual calls (J68AG, J68AR, J68AS, J68AE/J68NR, J68AH, J68AK/J68ID, J68ER, and J68ET) outside the contest.

Gerard, F2JD (ex 5R8EN) sent the last part of his log to Jean Michel, F6AJA, just before he left to Panama. He has made 11,410 QSOs (56% SSB, 40% CW, the rest in RTTY/PACTOR). In addition 1340, QSO from Nosy Be Island (75% SSB, 25% CW). All direct request are on the mail.

Lee, ZL2AL, reports the huge backlog of QSL requests for Zl8RI cards have been cleared and the last bunch left New Zealand about a week ago. QSL requests are now being done on a weekly basis. A special thanks to all hams world wide for their patience and kind donations. Plans are progressing well for a major, major assault on Campbell Island (ZL9CI) in January 1999 by the same Kermadec DX Association team.

T31 & T32, CENTRAL AND EAST KIRIBATI. It was reported on the EA DX-NET (3687 kHz) that DF6FK will be active December 24th as T32BB and T31BB on December 27th. QSL via DF6FK.

T32, EAST KIRIBATI. Andy, VE7AHA, called OPDX's answering machine just after the bulletin went to print and stated he will be active from January 14-21st on Christmas Island as T32HA. He is there primarily for fly fishing to catch bone fish, but states he will be taking a limited amount of radio equipment. QSL to his home call.

V3, BELIZE. Just a reminder to look for Mike/W5ZPA, Stan/W5JYK and Wondy/K5KR, this week (December 11-16th) as V31MP, V31YK, (Wondy's callsign is still not announced) on CW/SSB and RTTY. QSL to home calls.

VK0, HEAD ISLAND UPDATE. (The following are excerepts from a K4UEE press release and all OPDX InterNet Subscribers will receive the whole news

release, as an additional bulletin). Everything is on schedule for the January 3rd departure from Reunion Island. Members of the Heard Island team will begin arriving on Reunion as early as December 26th. Operation from Reunion (TO0R) will begin around December 30th for several days, emphasizing the low bands. All necessary shelters, cooking equipment, survival equipment, antennas, and of course, radio equipment has arrived on Reunion, apparently in good shape. The team consists of EA8AFJ, HB9AFI, HB9AHL, K0IR, K4UEE, K9AJ, KK6EK, N6EK, N6MZ, NP4IW, OE9AMJ, ON5NT, ON6TT, PA3DUU, RA3AUU, VK2JDM, W8FMG, W0GJ, WA3YVN, and 9V1YC. This may be the most experienced DXpedition ever assembled and they are chomping at the bit to get underway. Here is their itinerary:

Jan 3 Depart Reunion Island (TO0R)
Jan 8/9 Visit Crozet Island (TX0C)
Jan 12/13 Arrive Heard Island
Jan 15 On the air - Heard Island (VK0IR)
Jan 29/30 Depart Heard Island
Feb 1 Visit Kerguelen Island (TX0K)
Feb 7 Arrive Reunion Island

VQ9, CHAGOS ISLANDS. Pres, N6SS, is active as VQ9SS again for the next four months from Diego Garcia. He plans to be active on 160 meters during his local sunrise and sunset. Jim, K5TC, (ex VQ9TN) is offering to make skeds with Pres for anyone interested. Sked request can be sent to Jim's InterNet address: jhoward@ms1.nwla.com

I joined the ARRL around 1981 and never renewed. Last week I sent in a check to rejoin.....and for my son KE6VWF. The reason I joined again is because I don't like the direction Ham radio is starting lean towards. I also think our Congress would sell off all the Ham bands if they had a chance to. It's time to dig in!

My Opinion,
Don W6IQ

While it may sound like grounding is all important, you can choose a totally ungrounded system through some sort of link coupling. It's one of the oldest techniques available to get rid of a DC path from your antenna to your rig. Broadcast people commonly use what is called an ISOCOUPLER for the same purpose. Torroids can do the job for low power if wound correctly. Feed line stubs can be configured to a multitude of these chores too. You have lots of alternatives. If you have an artificial ground array on the roof, you can work an antenna that requires a ground against that, and let it float at what ever potential it finds, but best find a non-electrical wiring path to a ground. Be careful in your design so you can tell us in a while what you did.

Bill, k5pcw

Anything you can do to make lightning find a path other than through you rig is the ticket. Spark gaps also can help shunt the flow. Best thing is physically unplug the antenna from the rig when you are not using it.

I'm not a a particularly big W5YI fan, I remember for example his attempt to get K1MAN off the air by banning one way broadcasts entirely. However, I can also do some basic math. Probably at best, one in 10 hams will send in the requested fee, and get their license renewed that way. Even at bulk rates, he has to spend at least 15 cents per letter, and I suspect it's more for him, so let's say it's 20 cents postage per letter. Plus, he has to somehow get a database that he can use commercially, so that's another expense, let's say one cent per letter mailed out per year. At least $2 of that horrible fee is gone before he even begins. If he employs someone to check each application for renewal before sending it in, the cost goes up even more, even if as a VEC, he can electronically send in the information. The rate of return might be high, but somehow, I suspect it's not quite as high as most people think. Incidentally, there's nothing stopping anyone from taking the form, filling it out, and mailing to Gettysburg, total cost, one first class postage stamp. Incidentally, I suspect the figures will be more like one in 15 to 30, but that lowers the rate of return even more, and makes what he's doing even more of a service than I assumed with one in ten. 73, -art clemons-

I might point out that the FCC will also accept copies that are photocopied, printed and the like. The FCC has a lousy image of its 610 on its web page that it will also accept. I also know that a 610 produced by KC6TYF in a pattern to be loaded by Microsoft Excel works even if the form is produced Quattro Pro. In other words, if the form has all of the info required, and is signed, the FCC takes it now, unlike the first time I sent in a photocopy of a 610 in the early 80's, and some member of the staff took the time to type in the info I had put on the photocopy onto a 610 and send it back with a little note that I had to sign and date it, and send it back in the enclosed envelope as the FCC couldn't presently accept photocopies. -art clemons-

I believe Ungar made the RS soldering irons. The base of the heating
element is in fact the same as a 110v xmas bulb. Makes a handy drop
light in a pinch. The tip I believe was a 1/4"-20 thread.

Check Mouser, MCM, etc. I known I've seen replacement tips that would
work.

I have seen lots of nice Kenwood 520S in the $275 range or Drake TR4C for as little as $175. Then one could get a used Hustler multiband vertical for around $30 - $50 with coax. I have talked to lots of hams who have a setup like this who have very nice signals and good audio for less money than the price of a fancy new HT! Good luck. --- Steve N9ROU

2909. Ham Radio? Why Bother?

>Most hams are former CBer's. Well I'm a ham who has converted to CB.
The snobby attitude >on the ham bands is sometimes too hard to listen to,
so I go over to CB and chill out.

Ditto here. I've been active in CB since I was 12 years old (1976) After
listening to hams preach to me for years about the virtues of ham radio
("get your ham ticket", "get legal", "work the world", etc.), I finally
succumbed last year and got my license.

What have I heard since becoming a ham? Endless conversations about the
operator's equipment, antennas, the weather, and health ailments (older
hams, which seems to comprise 90+% of the total here in Florida.) Also an
unfair amount of criticism directed towards Technicians...can someone
please explain to me how one is not a "real ham", simply because they
choose not to waste a bunch of time learning a 19th-century communications
mode which nobody outside of the amateur service even uses anymore?
Arguing, fighting, and indecent language on 75-meters every night that
makes CB Channel 19 look like Sunday School by comparison. Constant
complaining about the latest proposal by the FCC to share the bands with
commercial interests, etc.

Bottom line: my 2-meter HT hasn't been turned on in months and my 10-meter
radio has a thick layer of dust on top. But the CB gets used every day to
communicate with friends, obtain traffic and road information, etc.
Practical, useful stuff in the game of life.

Is it any wonder the amateur bands are being sought by commercial
interests?

I ended up replacing my RS iron with a hakco solder station. :) Of
course my RS iron was usally the 6 dollar type. :) Know the one your
talking about, haven't seen one in years. I'd pickup a weller or
something. They'll last for years.

The ITU defines amateur radio succinctly this way, "a service of self-training, intercommunications, and technical investigations carried on by amateurs". It is the only radio service where private persons can experiment with radio technology solely for their own enlightenment and to satisfy their curiosity about how the invisible world works.

Hi !

On Tuesday next week (12/10) i'll come to Florida to spend my vacations.
My reciprocal permit to operate in the US was send to a friend in Ft.
Lauderdale, where i'll pick it up upon arrival.
My friend, who isn't involved in ham radio at all, checked the permit
while i was on the phone with him and told me, that my home call (DF1HX)
is stated there.
So i am wondering about how to sign, while operating in FLA, i guess
i'll have to add a 'prefix' or 'suffix' to my home call, but what ?

I am going to bring my HT (144/440) but no HF equipment since i am not
on a DXpedition but on vacations :-). BTW would be nice to get access
to a club-station or soemthing like that since i'd like to call a 'CQ DL'
in CW (my favourite mode on HF), while being in your country.

Preps are done, my HT is equipped with CTCSS and i have a big list with
repeaters in FLA retrieved from WWW.
I am going to set up my 'headquartes' in a rental Appt. in Ft. Lauderdale,
however i plan to travel to the Keys and Orlando Area as well...

thanks ahead and looking fwd to meeting you on the bands !

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1008 for release on Friday, December 6, 1996 to follow.

(*****
The following is a QST

Guatemala reassigns the 70 cm band to business users and the reallocation may be felt by hams worldwide. Also, hams tell the ARRL to keep the code.

These stories and more on a special extended Newsline report number 1008 coming your way right now:

(*****
70 CM BAND LOSS IN GUATEMALA

Hams have lost out to commercial users of the 70 cm band in Guatemala and the cost could be interference to ham radio satellite operations world wide. This is because Guatemala now intends to put commercial operations across the band. Commercial signals that will probably include the 70 centimeter satellite subband.

Manfred Kolbe, TG9IKE, reports via the Amsat News Service that on Monday, November 18, 1996, the Diario de Centro America published the new law regulating all telecommunications in Guatemala. Part of the law removes

ham radio access from all frequencies above 146 MHZ except for tiny slivers in the giga hertz region.

The new law was created by a commission from the state owned telecommunications company GUATEL, which consulted the Radio Club of Guatemala about the project. The commission was quite astonished to learn that ham operators operate some 20 satellites for global communications. Even more so when Guatemalan hams supplied a list of amateur satellites with operating frequencies and modes. The existence of the Amateur Satellite Service was also brought to the attention of the CEO of GUATEL. Also told was the chairman of the committee of congress in charge of the new Guatemalan telecommunications law. He was even presented IARU and ITU documentation.

But even with all of this documentation, the decision was made to run the hams off and turn the spectrum over to money making operations. As a result, the 70 cm band in Guatemala which is comprised the frequencies between 430 to 440 MHZ has now been declared available for commercial use only.

And its not only Guatemala hams that will face problems because of the change. There is likely be heavy interference to Amateur Satellite Service operations in Region 2 when the transponders on various ham sats pick up commercial signals and rebroadcast them on other bands. Even for low orbiting satellites this will affect an area from southern Canada, all of the USA, Mexico, Central and South America down to Chile and Argentina. Taking into account the future operations of the Phase 3D ham satellite, the situation may even get a lot worse.

(*****
SAR'S AND WRC-97

Hams worldwide could be affected by another attempt to share the 430 to 440 MHZ band. The 1997 World Radiocommunications Conference likely will be asked to allocate the band 430-440 MHZ to the earth exploration satellite service and upgrade the status of this service in the bands above 1 GHz. This includes amateur secondary allocations at 1240 -1300 MHZ; 10-10.025 GHz; 24.05-24.25 GHz; and 78 -79 GHz. Current proposals to consider support for SAR's at WRC-97 have studied compatibility between space services and other services.

Proponents would also like to scan temperate forests but operators of surveillance radar have objected that even infrequent interference would be unacceptable. That could rule out operations over North America and Europe, the areas with the greatest number of amateurs and probably those most active in the 70 cm band. Even for those amateurs in the tropical regions, any interference would be infrequent and limited by the need to avoid interference to terrestrial radar.

(*****
HAMS WANT MORSE CODE

The numbers are in and by a wide margin hams say that they want the Morse code to stay.

In a recent survey conducted by the American Radio Relay League, amateurs have made their feelings known. In over rousing fashion, amateurs have said yes to the retention of morse code. Sixty two percent of ARRL members polled said yes to keeping the code. While thirty percent said no. Of all amateurs polled, members and non-members alike, Fifty four percent said yes to keeping the code, while thirty seven percent said no.

In this era of the popular no code tech license, amateurs say no to the total no code licensing.

The bottom line. In months passed some high ranking officials have publicly hinted that the ARRL might not be opposed to expansion of privileges for no code hams. As a result of this survey, when the League goes to WRC '99, it will have to stand its ground. It will be forced to say no to those administrations whose telecommunications leaders say that its time to delete the Morse code as a testing requirement for getting ham radio voice operating privileges on bands below 30 MHZ.

(*****
Operation Grecian Firebolt '96

Members of the Military Affiliate Radio Systems of the Army, Air Force, and Navy Marine Corps and "civilian" hams cooperated with the U.S. Armed Forces and the Federal Emergency Management Agency this past summer during Operation Grecian Firebolt '96. According to the ARRL Letter, the test of global communication capability involved 23 active and U.S. Army Reserve units in 11 states and three countries.

The exercise was sponsored by the US Army Information Systems Command. During the exercise, civilian volunteers throughout the country helped to establish an emergency communication network by providing personal radio equipment. Ham radio volunteers operated on MARS frequencies, initiating or relaying emergency message traffic.

(*****
BOB McNAMARA LEAVES FCC

Robert McNamara, N1KHF, who has served as Chief of the FCC's Private Wireless Division is leaving the Commission on Friday, December 13 to enter the private sector. Word out of Washington is that McNamara has accepted a position with Nextel Communications. Nextel is a major supplier of telecommunications services.

Since the departure of Ralph Haller, N4RH, from the FCC last June, Bob McNamara has been the chief point of contact between the commission and the ham radio community. He even attended last falls' ARRL National Convention in Peoria, Illinois.

The departure of Bob McNamara hot on the heels of Ralph Haller could impact negatively in regard to several key issues affecting ham radio where an ongoing dialogue with the FCC is essential. These include attempts to

develop the so called single point of contact on FM repeater related issues and position planning in regard to upcoming World Radiocommunications Conferences planned for 1997 and 1999. The real impact of McNamara's departure from the FCC on the future of Amateur Radio really will not be known for some time.

(*****
SLOW SPEED CHASE

An O.J. Simpson style slow speed Thanksgiving day chase involving CB radio.

It was the busiest travel day of the year when a twenty seven year old truck driver from Lagoaty, Indiana decided to disregard the State police Officers requests to stop for a truck inspection. He put the pedal to the metal and fled north on route 67 from Martinsville, Indiana.

During the thirty mile chase, the man blew stop signs and dodged traffic while lead local, county and state officers on an O.J. Simpson style 45 mph slow speed chase. Using stop sticks, the eighteen wheeler came to a grinding halt on Interstate 465 near the Indianapolis international Airport.

Using CB Radio, a hostage negotiator from the sheriffs department spent an hour trying to talk the trucker out of his truck. Both lanes of the Interstate were blocked during the ordeal causing many people to miss their airline flights. The SWAT Team finally shot out the trucks passenger side window and tossed in a stun grenade. The Lagoaty man quickly exited the truck where he was brought to the ground by a police dog.

According to motorists, monitoring the negotiations on a CB Radio, the man only wanted to talk with President Clinton, drop his truck load and get home for Thanksgiving. The trucker reportedly enjoyed a Thanksgiving meal courtesy of the Morgan County Sheriffs Department.

(*****
PIRACY ON THE HIGH FREQS

A radio pirate has been heard in Portland, Oregon on 88.7 MHZ. According to the areas Society of Broadcast Engineers newsletter, the station is broadcasting techno and rap music with no talk. The transmitter appears to be somewhere in downtown Portland or close in on the east side. Monitors say that it has enough power to be heard over most of the city on good receivers.

(*****
HAM RADIO BUSINESS PROBLEMS CONTINUE

Yet another ham radio manufacturer has gone belly up. This time its 624 Kits of Spartanburg, South Carolina. The companys's owner Pat Bunn, N4LTA, is telling customers he is no longer able to furnish technical support and the company is pretty much history. The company had been advertising its 5 watt transceiver kit as recently as September QST.

Word of 624 Kits demise comes less than a week after Advanced Electronic Applications shut its doors and put out word that it needs to find a buyer very quickly.

(*****
HTX-404 CLOSEOUT

The Christmas Radio Shack flyer shows a closeout on their popular HTX-404 UHF handheld. The radio has been marked down to under $200 for closeout. Local Radio Shack store personnel we spoke with say that they are not aware of any replacement model coming to store shelves.

(*****
GROVE COMMUNICATIONS EXPO

The seventh annual Grove Communications Expo held October 18th to the 20th in Atlanta, Georgia, emphasized satellite communication as well as more traditional terrestrial monitoring activities. Astronaut Ron Parise, WA4SIR, keynoted the banquet, which drew more than 170 people. Ron's slide show mentioned SAREX activity aboard the space shuttle. WA4SIR also brought along a tape recording containing SAREX communications that clearly demonstrated just how difficult it is to copy narrowband FM signals on the shuttle under "high volume" conditions.

FAR OFFERS SCHOLARSHIPS FOR HAMS

The Foundation for Amateur Radio, Inc., plans to administer 60 scholarships for the 1997-98 academic year to help licensed radio amateurs with their post secondary education. Five of the scholarships are fully funded with income from grants and the foundation's annual hamfest in Gaithersburg, Maryland. FAR administers the remaining 55 scholarships without cost to the donors.

Licensed hams are eligible to compete for these awards if they plan to pursue a full-time course of study beyond high school and are enrolled or have been accepted at an accredited university, college or technical school. Awards range from $500 to $2500, with preference given in some cases to those pursuing certain courses of study or to residents of specific geographical areas. Application forms and additional information are available by letter or QSL postmarked prior to April 30, 1997, from:

FAR Scholarships
6903 Rhode Island Ave
College Park, MD

NASA TV MOVE

NASA TV will be moving to the GE-2 satellite in 1997. WB5UUK says that GE-2 should be launched and operational during the 1st or 2nd quarter of 1997 and will take the present location of T-2 at 85 degrees West.

Additionally, GE-1 is completing it's testing phase and should be operational. It is located at 103 degrees West.

(*****
HALL OF FAME

Some names in the news starting with the late Bill Leonard, W2SKE. Leonard, former President of CBS News, was inducted into the Broadcasting and Cable Hall of Fame on November 11th in New York City. Leonard, an avid DXer and contest operator in the 1960s and 1970s, died in October 1994.

(*****
ELECTED TO SBE

Congratulations to Jerry Nichols, W7AXN on his election to the Society of Broadcast Engineers Board of Directors, replacing John Schneider, KB7AK. Nichols will also become his chapter's National Liaison to the SBE board.

(*****
STSORBIT PLUS VERSION 9643 RELEASED

David Ransom has announced the release of the latest version of his STSORBIT PLUS tracking program. The key feature of the new version is the user selected complementary tracking option for amateur radio use. For more information please e-mail David at:

rans7500@spacelink.msfc.nasa.gov

(*****
RADIO PAGES ON THE WWW

Bill Marcus, N3WNC says he needs your help. Bill is trying to compile a list of all radio related pages on the Internet. He says he has sent out numerous messages out but has received only minimal responses. So he is asking hams with Internet websites or links to let him know where they are. You can e-mail him to:

n3wnc@hotmail.com

(*****
DX

In DX, the "DX News Sheet" reports that JW5NM, is very active from Svalbard on 160 meters from 18:20 to 1825 kHz. He hears Japan between 21:05 and 21:25 UTC. The USA West Coast and Hawaii are audible at 06:30 UTC. He will be QRT from December 1st to the 15th but will be on for contests. QSL via LA5NM.

And JF1SQC, says that he and several others will operate as KH0DQ from Saipan in next CQ World Wide Contest as a Multi Single entry. QSL via JF1SQC.

(*****
SAYLARC SEEKS NEW MEMBERS

The Second Area Young Ladies' Amateur Radio Club is looking for new members. The group meets Fridays and Saturdays at 09:00 Eastern Time on 3950 kHz, plus or minus any QRM. Stations are welcome to join in. For more information, send e-mail to Roberta Newman, AA2JO at:

aa2jojh@northnet.org

(*****
INTERNATIONAL CONTACT COMMEMORATIVE

Ham radio is about to help to commemorate the first ever trans-Atlantic radio contact.

Its was just seventy five short years ago that the first transmission of a radio signal that crossed the Atlantic Ocean occurred. On December 7th, 1921 American Amateur Radio operators began sending a series of test transmissions from Greenwich, CT to amateur radio operators in the United Kingdom.

After several unsuccessful attempts Ernest Amy, Edwin Armstrong, George Burghardt, Mintin Cronkite, John Grinen, and Walker Inman finally made a connection.

Their signal was received in Scotland by Paul Godly. Although it was a short message, this modest technological feat had a major impact on world wide communications.

Today, if you drive into Greenwich, CT, via the Merit Parkway, exit 31,. Go about a mile and a half south and there is a monument. It is located about 200 feet from the site of the original transmission. The inscription on the monument reads, "Near this spot on December the 11th, 1921, radio station 1BCG sent to Scotland the first message to span the Atlantic via shortwaves. 1BCG, an amateur radio station, was built and was operated by members of the Radio Club of America."

In honor of the seventy fifth anniversary of these historic tests, another contingent of American Radio Amateurs will use a replica of that original transmitter to repeat the transmissions from a site near Greenwich.

Bruce Kelly, W2ICE, one of the participants in the event says that hams will take to the airwaves on December the 11th, 1996 using the special callsign of W1BCG. The event is expected to attract world wide attention.

If you are lucky enough to work W1BCG, please QSL as directed on the air.

Hy everybody,
I'm looking for Internet Archives of old QST review issues and the one I'm interested in is QST oct.1981, pag.18, about a directional bridge construction scheme.
I'm from Italy and it should be difficult for me to order it.
I know that the ARRL site shows selected articles from QST but it doesn't seem to have an archive of former issues.
Any help about this will be most appreciated. Thank you.

>
> Thanks
> bds3@juno.com
It would seem that you have hit on a classic example of which to tune
first. Put your SWR meter as close to the antenna as possible, and with
as little power as you can get by with, tune the antenna. Increase the
power some, and do it again. After you have ALL the reflected power
minimized, you should have a reasonably resonant system with best
performance. What happens is, the antenna is reflecting some power, and
the bridge (being dumb) is detecting a power level. whin you engage the
amplifier, the level of the reflected power is raised. Most of the
inexpensive SWR bridges are really back-to-back rf volt meters, and the
diodes used to detect the power are non-linear; hence the readings are
only good if the load (antenna/dummy load) is equal to the resonant
impedence of the line (coax) and the final of the radio (don't touch it)
A reading of 1.5 - 2 isn't really that good. It should be below 1:1.2
to be effective. ... KB4EG

>got 20 cents. The cost of production is neglible (computer spits them
>out at night, underpaid secretary folds and stuffs and labels).
No offense, but obviously you have never done it, nor paid someone to
do this.

On a normal day of billing, for our little business, our secretary
will end up working all day on getting our billing printed, stuffed,
SORTED (yep, one of the requirements for bulk rates is it must be
sorted by area code) run through the postage meter, and taken to the
post office.

And I can guarantee that Fred's mail is much larger than mine.

>For sake of argument, let's say we're off by a factor of 100%. That
>still means they cost him less than 50 cents to produce. That's a far
>cry from $2.

Ok, let's say $.50 to produce. Now, out of 10 letters, how many do
you think will actually return it to him?

1 out of 10? Fred get's $6.00 back, from a $5.00 dollar expenditure,
maybe?

And these figures are BEFORE LABOR is figured in!

And I think your cost estimates are low!

This would point out to the two conclusions...

1. Fred is doing it, just to provide a service, and hopes to break
even.

2. Fred is a bad businessman. (It is obvious that this is not true)

>Nothing Fred Maia has ever done has been for the "benefit of the
>hobby". The same applies to the ARRL. As the old saying goes:
>"follow the money". You can bet there is a profit in it, otherwise
>Maia wouldn't be doing it.

And what in the devil is wrong with that? I am not going to work all
day without making a profit!

that one. Where was there
ever a 'legal justification"

to begin with?

> 19th-century communications mode to obtain an
>amateur radio license. If you still want to start your car by use of a
>hand crank, fine...but you have no right
> to force it on the rest of us.
^^^^
Who is forcing anything on anyone? Who is "you" that you speak of?
Were you coerced into the hobby? Someone hold a gun to your head? If
it is no fun for you, you need to look for another pasttime my friend.

Just who are all of you code abolitionists preaching to/bitching at
anyway? Better yet, what would you have ME and other coded licensees
do about it? Your answer should be reasonable and appropriate.
Anything else would be emotional drivel.

No one in here, (deja vu) has any authority to change the rules as
they are so why does this thread keep up?

>The code requirement will be abolished soon. Either the ARRL and the FCC
>will get with the times, or else it will be challenged in court.

If only roughly 1/5th of the hams are not coded, at this time, what
makes you think the minority will get their way sooner?

You have an obsession with this thing. Your plane is going down in
flames and you are firing your guns all the way to the ground even
though they don't work. Hmmmm.

I have seen very few, and I mean very few, postings from any of the
"code is dead" crowd that made any sense. Everyone else, like you,
let's their emotions talk via their keyboard. When that happens all
objectivity goes out the window and people start mixing apples and
oranges in their arguments and make no sense. I mean, what does a
hand crank have to do with starting cars now-a-days let alone amateur

radio?

I am not in favor of seeing the code go by the wayside but I can appreciate the idea that it just may one day...but to the detriment of amateur radio-in my opinion. We are taking this hobby for granted now and treating it as a "right" and not the "privilege" that it is. "We have a right to use the HF bands and not have to learn code to do it! Code is too hard to learn. It is a barrier that keeps many out of ham radio." Wah wah wah...you get the point. That attitude is going to be the demise of ham radio and not really the code, no-code debate. When something is obtained for nothing, like this, it will probably be taken for granted. The 27 MHz band-case in point. That is where you need to go if you are looking for instant gratification.

I look forward to yours and anyone else's un-emotional and adult-like response. I don't mind reading them when they are written thusly. It's the whinining and crying most of us abhor.

>+------------+-------------------------------------

My first non-Icom HT was the Yaesu FT530. It had many innovative features like the voltmeter (which despite some rumors) was quite accurate and let you know the relative state of the battery. Also, backlit keypad (rare then), and the easiset programming interface I've ever seen.

Recently I purchased a FT51. Same comments, several innovative features such as the spectascope which i like when looking for freqs to listen to at the airport. Also, the voltmeter is still there and the programming intercase is virtually identical. (The programmers equivalent of an API). Anothe VERY innovative thing is the ADMS programming software. You connect the HT to the computer and you have a Windows interface to program almost all features. You can save infinite "templates" or complete setups. If you mess up your settings, it is easy to restore. I like keeping the memories sorted by city or club name. Easy to sort them any way you want with the computer interface. (the display has alphanumerics along with the freq display. Imagine adding a freq and alphanumeric to a Kenwood for example, and then wanting to re-sort them alphabetically so you can QSY quickly.

The FT51 DOES NOT receive 800mhz, so maybe the problems mentioned in some of the above posts doesnt apply. You can select 800 mhz on the display, but no rx.

Source record: 210908
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

BURY RADIO SOCIETY - ANNUAL RALLY 1997

Bury Radio Society are holding their Annual Rally 1997 on Sunday, the 20th April, 1997. Doors open at 11.00 am, or 10.30 am for the Disabled.

The Venue is the ever popular Castle Leisure Centre in Bolton Street, Bury, Lancashire which is in the Town Centre, close to the Bus and Metro Link (Tram) Interchange.

Visitors coming by Road will find the Route signposted from Junction 2 of the M66 Motorway as well as from the A56 and A58. Talk In will be on Two Metres (S22 - 145.550 MHZ). The Castle Leisure Centre has a Car Park adjacent to the Centre, although priority on this Car Park will be given to the Disabled and Traders, as well as ample Public Car Parking within a couple of minutes walk of the Centre.

There will be the usual mix of Traders representing all aspects of the Hobby (Amateur Radio, Electronics, and Computing) as well as a Bring and Buy Sale.

The Centre has a Licenced Bar with a comfortable Lounge and a Cafeteria, both on the First Floor with easy access by Stairs and Lift close to the Ground Floor Exhibition Halls.

Why not bring all the Family? Whilst you visit the Exhibition, they can enjoy the Sports Facilities of the Centre, including two Swimming Pools, or ride on the East Lancashire Railway whose Bolton Street Station, which has a Cafeteria and many interesting Displays, is next to the Centre and the Services often operate under Steam at Weekends.

Past and New Traders are always welcome. Stand Prices are amongst the most competitive in the Country. For further Information and a Booking Form, please ring Lawrence Jones G4KLT, Exhibitions Manager for Bury Radio Society, on 0161 762 9308 or write to him c/o the Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB.

73 de Keith G8EAP and G0WQD

PS: Why not visit Bury Radio Society? They meet every Tuesday Evening at the Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB, close to the Town Centre, from 7.45 pm onwards and Visitors are always welcome. The Main Meeting is on the Second Tuesday of each month with Informal Meetings on intervening Tuesdays. (For information about Bury Radio Society please ring Lawrence Jones G4KLT, Chairman, on 0161 762 9308 or to find out more about the Mosses Centre and how to get there ring 0161 761 2079 during Office Hours and on Weekday Evenings.)

> i'll have to add a 'prefix' or 'suffix' to my home call, but what ?

Thomas, you really should get a copy of the FCC regulations as you
are required to comply with them. These are some particular rules
for operating with a reciprocal permit, together with their location
in the regulations:

1) You must identify your station with an appropriate US prefix
followed by your home call, e.g. W4/DF1HX. [S 97.119(f)]
(Canadians should note that they have a different rule here.)

2) You must identify your location (City and State) no less
frequently that once during each contact. [S 97.119(f)]

3) You must operate within the rules of your home licence privileges
as well as within US Extra privileges. This means that you may only
transmit in the Region 1 part of 2m (144 to 146 MHz), so you will
find useful repeaters on 2m very scarce if any. [S 97.107(b)(2)&(3)]

I'll email you a copy of all the FCC regulations for amateur radio
if you wish. Have a great vacation.

Regards,

> knowledge of what is actually going on on this freq, are talking about
> "paying visits" to these so-called "offenders".

Ok, since you seem to imply you know the scoop, please let us in on it.
I've been around long enough to know that these kinds of things are seldom
simple or black and white. I certainly haven't even yet considered putting
the blame on any party.

> My guess is that all this rubbish about "cleaning up" 3894.5 will go
> about as far as the pink plump rumps of these little puritans ever
> venture from their keyboards.....not too far.

Well, I'm certainly no puritan and also no wimp. I've been doing physical
training and weights for a long time now, BUT, I also know that physical
intimidation will never solve any problem of this sort and I certainly do
NOT
advocate such action. However, newsgroup discussions and brainstorming
may yet turn up a solution that is acceptable to ALL parties involved.
Grabbing
a few of the combatants and dragging them out for a few beers and having a
heart to heart could be immensely useful, though.

I would not like to see commercial interests grab our bands and diminish
our
freedoms simply because they could make the valid argument that they would
make more productive use than as presently evidenced. Remember, in
politics
it takes only a few well documented examples to swing attitudes. I would
really
like it if my kids had the opportunity to become hams, and I fear this is
in
jepardy at the present.

If, as you imply, we should perhaps just throw up our arms and give up,
well, then
of course nothing will ever be accomplished.

...Peter

> no-code HF ticket.

My comment - to your overall proposal. It's too much. But like you said to a previous response - at least you proposed something. I have my own idea that is much like some others I have seen - it's not really original.

But first - I don't believe that theory tests are too easy. How hard do they need to be? They cover relevant material in consideration of the privleges the license class allows. If the code testing requirement is deleted I don't there is a automatic need to change the difficulty if another test to take it's place.

I don't support going to the trouble of having international agreements changed to eliminate code requirements. I like the idea of having three license classes in the U.S.

Class I = A written test that is equivalant to combining the current novice and tech written. No morse code test. No HF privleges. All privleges above 30 MHz.

Class II = Class I prerequisite. A written test equivalant to the current general class written. 5 wpm code test. Current General HF privleges.

Class III= Class II prerequisite. A written test that is equivalant to combining the current advanced and extra exams. No additional code test. All current extra privleges.

This idea dumps the current novice license concept. Many people won't like that - but we can't please everyone on every issue. Some people won't like ANY of it.

"Grandfathering":

Current novices would be given a certain amount of time to upgrade to at least class I or II. (For EXAMPLE - one year from implemention) They would keep all current privleges until the grace period ended - then

assume the privleges of their new class if they upgrade. This would mean that a novice going to class I would lose his HF privleges.

Current techs assume class I. If it was determined to be in the best interest of the and ease administration we could forget the novice grace period and just bring them in as class I.

Current tech-pluses and generals assume class II.

Current advanced and extras would assume class III.

It simplifies the license structure without having to recarve the US band privleges. Eliminate Novice. Band privleges for the class I remain the same as the current no-code tech. Class II assumes current general privleges. Class III assumes current extra privleges.

The reason I like this system is that it reduces the number of classes. I don't understand why we need 6 classes of ham in the U.S. when 3 would do fine.

It also keeps a code requirement - but it makes morse code stand on it's own merit. Let the amateurs create their own incentives for improving their code skills through contests, awards, etc. But it gets the "incentive" out of the regulations. But there is no need to have the ITU requirement changed to eliminate the minimum standard.

Now. Before anyone starts flaming me, let's be clear: This is NOT a proposal for a no-code HF ticket. I have NEVER proposed eliminating the code requirement for HF. I just don't think that morse code should survive because it is forced on operators in order to upgrade. If morse code is worthy of life (I think it is) it should go on without artifical life support.

Why should the no-code tech license be non renewable? The current
no-code tech is no more "entry level" than a tech plus. And I don't
understand the reasoning behind having a limited term on the novice.

I liked the idea floated by the FCC a while back of lifetime operator
licenses (not to be confused with station licneses). I don't know what
we gain by making people retest if they don't renew within two years of
expiration. If there is compelling need to retest, then we should be
retesting everyone for renewal.

2938. All Hail King Mackey the Great

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-09 00:00:00 UTC
From: wa7twi@primenet.com
Message-ID: <58ikpa$miv@nnrp1.news.primenet.com>
Source record: 210615

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great.

>in bulk it probably does cost him 15 cents each piece of mail. Tack
>on another 5 cents for the envelope and the letter in bulk, and you've
>got 20 cents. The cost of production is neglible (computer spits them
>out at night, underpaid secretary folds and stuffs and labels).

Some years ago the cost of preparing a business letter or a monthly bill or statement was said to be about $2. Now what Fred sends out is a form letter, a 610, and a return envelope, so that may be cheaper, but I think you may be underestimating the costs of labor (including FICA, workmen's comp, withholding bookkeeping, etc), depreciation on capital equipment (laser printers don't run forever), materials, and postage.

I'd guess it costs him at least 50 cents to prepare each mailing, and then there is postage. To qualify for bulk rates, he has to presort the mail by zip+4, and has to meet a certain minimum volume to get the bulk discount. When we looked into it for our club newsletter, we'd only save 3 cents per item following the bulk mail procedures over regular postage. (We didn't do it because even volunteer labor is expensive.) So you're still looking at 29 cents each to mail even if he goes for the bulk mail discount. Thus he's probably paying 79 cents per item out the door. (He may be doing a bit better, depending on daily volume, and if he uses unsealed envelopes to get the second class rate, he may pay as little as 19 cents each to mail them, making the cost 69 cents per item.)

Now he also can't expect to get 100% response to his mailings. In bulk mail circles, a 3% response rate is considered very good. That means he'll take in $18 for every 100 mailings, and those mailings cost him $79. Looks like he'd be losing $61 per hundred if he only got the standard bulk mail response rate. But lets say hams are more gullible than the general public and give him a 20% response, and he opts for second class delivery. He now takes in $120 per hundred at a cost of $69 per hundred

and makes $51 per hundred.

>For sake of argument, let's say we're off by a factor of 100%. That
>still means they cost him less than 50 cents to produce. That's a far
>cry from $2.
>
>Nothing Fred Maia has ever done has been for the "benefit of the
>hobby". The same applies to the ARRL. As the old saying goes:
>"follow the money". You can bet there is a profit in it, otherwise
>Maia wouldn't be doing it.

Well, I certainly believe that he has no intention of losing money
on the operation, even the deep pocketed ARRL can't do that for long.
(Only the Feds can operate at a deficit year after year.) But his
chance to break even, much less turn a profit, is dependent very
sensitively on how many amateurs take him up on his offer. He has
to get better than a 10% response in order to break even.

You've got to ask yourself, if you received a notice that your
license was about to expire in the mail, and it included a form
610 for you to fill out, and a return envelope, would you fill
out the form, stick it in the envelope with a $6 check, put a
stamp on it and mail it? Or would you say to yourself, "hey, this
is important, I'd better make sure the FCC gets it right away"
and fill out a new 15 cent envelope with the address on the form,
stick the form 610 in it *minus* the $6 check, and send it to
Gettysburg? I'd hope most of us would be smart enough to do the
latter.

I'd note that the ARRL is offering the same service as Fred is
proposing, IE send them a form 610 and $6 and they'll file your
renewal for you. But I don't think they intend to do bulk mail
solicitations like Fred is going to do. They'll probably just
print a notice in QST to remind you to look at your expiration
date. When they announced they'd be doing this, I questioned
it. It certainly doesn't seem to make much sense to mail them
the filled out form 610 with a $6 check attached when you can
just mail the filled out 610 direct to the FCC minus the check.
Even if you sent it certified mail as I always do, it'd still
be cheaper than $6. (And the return receipt is proof that you
filed a timely renewal even if the FCC manages to lose the 610
and screws things up. That saved my bacon once on a commercial
license renewal.)

I agree with you 100%. I am currently in the Army and we had a problem with them using spread spectrum on the 430-440mhz band. We approached them with the problem and found out there was nothing we could do about it seeing that that part of the band is primarly for military and we are secondary users of it. Still it did not stop us. We got the local law enforcement to step in as it was also interfearing with their communications. Once that happened they turned down their power and we haven't seen them since. We also had a problem with one of our repeaters in that it had a spur that was getting into the military repeater that was co-located on the same hilltop. One of the club members that works with the army said don't be suprised if you hear a military person on their saying that we are interfearing. For one if that person is not a licensed ham then he or she should not be on the ham bands and they are violating federal law by doing so. I think that this is the same case and the Andrews operator should be fined to the max to show them that the ham bands are not a place to be. The military has tons of spectrum so I don't think they should have been there in the first place. In time of war that is understandable but not in peace time.

In article <jlowmanE260wA.ExM@netcom.com>,
Jim Lowman <jlowman@netcom.com> wrote:

>And I wonder if they have come to regret that position?

I doubt it. Most new hams that I know today have little idea what
transpired in the mid-80's. They really don't care.

In this section of the country (primarily blue-collar state) most
new hams have a tough time scraping together a couple hundred bux
to buy a 2 meter radio, let alone spend $35 to join the ARRL each
year.

The cost of supporting the League is over-pricing the membership.
I suggest the League look at converting some of its "free" services
to a "pay if you use" service, and reduce the membership fee. (Doubt
it will ever happen though, someone has to pay K1ZZ's salary and
business "trips" all over the place).

>Obviously, if more no-coders were ARRL members, the results of the vote
>might well be different.

Maybe. But the number of no-code hams didn't significantly change the
overall numbers either, when factoring in non-members, so your
premise here is questionable.

>One of the arguments that is often heard on these newsgroups, is that the
>code requirement is "keeping brilliant people who will enhance the state of
>the art" out of ham radio. I haven't noticed this among our club's
>no-coders, or those who get their license through our VE team.

You're not alone. Most of the new hams that I have seen the codeless
tech license bring in are merely CBers looking to "get away" from the
garbage on CB radio. Of course, that's just this section of the country.
In Silicon Valley I'm sure things are different.

However, what it does show is that the codeless license doesn't
appeal to engineers, it merely appeals to a cross-section of Americana
that is interested in getting into amateur radio.

>How long do you suppose it would be, once no-code Generals
>overwhelmed the voice subbands, that they would want the CW/digital subbands
>for phone, "because CW is outdated?"

I give it less than a year from the creation of a codeless HF license.

Halelujah, Brother Glenn!! ;-)

You'd think someone was attacking the church by suggesting a no-code HF
license.

I have grown so tired of the "you have to WORK for it" and "you should
earn it" arguments. As if the purpose of morse code testing is to
evaluate the applicant's character. No - it's to evalulate (somewhat)
the applicant's ability to communicate with morse code. With that, the
simple question is: Is it necessary, in 1996, to require applicant to
demonstrate the ability to use morse code in order to be granted an
amateur license with HF privleges?

If you think it is necessary to evaluate an applicants character, do it like the government does when they are doing a background check for someone seeking a security clearance. Interview him. Then we can send the VEs to the applicants neighborhood to interview people that know him, talk to his family, his co-workers.

If morse code wasn't a unique skill would you still require it? What if morse code was required to graduate from high school just like math, science, language, etc.? If that were the case, most people would pass an average morse code test without much "work". Would we have to come up with some other kind of flaming hoop for people to jump through?

> http://www.hamradio-online.com

I'd just like to thank you and your site for renewing my interest in ham radio. I got my first license in 1953 and was last on the air in 1970 -- and let my ticket lapse.

I happened onto hamradio-online for the combined weather/hurricane and earthquake maps and realized that I wasn't prepared for weather emergencies (in communications).

Last Saturday I passed my General test(s) for the first time in over 40 years.

Again, a big thanks.<grin>

Hi Greg,

In article <58h6jq$s3b@nnrp1.news.primenet.com>, From kc7gnm@primenet.com (Greg Thompson), the following was written:
> I myself don't like code but I think it
> should be kept. I passed my 5 wpm after taking the test twice and I am
> studying for 13 now. I don't use code on the air as I don't like it but > will learn it because it is in the rules. CW is a great filter for all > those that think ham radio is nothing but a family service.

Exactly.

If a product (a ham ticket) is too cheap to get (by memorizing answers to a pre-set group of questions), then the result is worthless.

Every salesman knows that you have to charge a good bit of money to have a product be *perceived* as worthwhile. The same is true of any licensed occupation or privilege. If all you have to do is pay money for a license (fishing, hunting, marriage), there is no skill or knowledge requirement conveyed by the license. If, however, tests are given that will weed out casual or incompetent practitioners (electricians, doctors, pilots, hams), then the license shows that at least a minimum competence in the discipline has been met.

The radio spectrum is an expensive piece of real estate and there are many groups of people wanting a slice of it for their use. Hams have a few small slices because it benefits the countries allowing ham operation (mostly in natural and man-made disasters). However, that benefit is greatly diminished if the selection process becomes meaningless by testing only for the ability to memorize test answers.

Although I normally am in favor of majority rule, a couple of comments to the rumor (I will not accept it as fact, because I don't know it to be) that a recent ARRL poll showed that most members want the CW requirement for HF privileges retained.

1. Self selected polls are notoriously inaccurate, and no one who has a working knowledge of statistics would accept a poll in which the respondents are those who must affirmatively phone or mail in their responses. "Dewey defeats Truman," remember?

2. Sometimes an organization must lead, rather than follow, public opinion. The CW requirement is killing our hobby by starving it of new members, and diverting young people (potential hams) away from amateur radio to the internet. This is not desireable. ARRL should act in the best interests of amateur radio and work to eliminate the CW requirement. It has no rational basis, now that CW is essentially a thing of the past everywhere but for recreational amateurs. The "service" component of our hobby, i.e. nets, mars, etc., has long since abandoned CW. It is just about never used in disaster communications.

It would be refreshing if Wallingford took the time to read my posting and
then reacted. Obviously we agree that there should be written examinations.
But I fail to understand how I can be incorrect with respect to an opinion
that I have not tendered at all - i.e. the issue of prior publication of
examination questions. (With respect to this issue, its a no brainer - it
won't change. I understand that there are freedom of information legislation
that must be respected. Moreover, I understand they examination questions
have been known for decades prior the current certification infrastructure.
No point in trying to keep secret of those things if one cannot do so.)

RF equipment wants to see "real" ground as close to it as possible. You will have to develop an "artificial ground" because at the frequencies of Amateur Radio RF, your equipment will see the cold water pipe as an open circuit. I had this problem once with just 30 feet of wire to 3 actual ground rods.

You can get a box that does the artificial ground for you from MFJ (look in QST magazine), but I have never tried one. You probably should post a question like this in a news group like rec.radio.amateur.misc. Good luck.

>people that need help.

[...]

Yes, it is getting rather large, isn't it? If you think the four-part version is big, it will, by necessity, have to go to *five* parts starting next month in order to continue to be posted to Usenet News.

The WWW version of the Elmers List:

http://www.novia.net/~pschleck/elmers/

has gotten very successful. So successful, in fact, that the page gets a few hundred hits *a day* and takes on about 20 new volunteers *a month*. The third (!!!) biannual mass-ack (due to come up over the next few months) should prove interesting in seeing how many of them are still committed (or even reachable, for that matter).

However, I wanted to follow up to this thread, not only to comment on the size of my resource, but also Elmering in general.

Jim says that he's found most of the potential Elmering candidates un-Elmerable. That's a shame, but it may also be a matter of perception and attitude. Elmering may be hard and full of pitfalls, but the other alternative of writing off whole sections of the existing amateur population, as well as potential candidates, can only lead to the destruction of the service. Having had some experience recruiting and working with Elmers (and somehow finding the time to do a little Elmering myself), I would say that the ideal Elmer possesses the following qualities:

- Realizes that most of the bad examples mentioned here are usually not due to outright maliciousness, but often just plain ignorance. Patient attempts at education and awareness can go a long way towards heading off bad or illegal behavior in the future. If you write them off, you have forfeited any input in trying to turn them around.

- Knows that sometimes to be a good Elmer is to mentor the candidate on what they are interested in, and not necessarily what the Elmer is. The student should exceed the teacher for the field to advance.

- Conversely, also realizes that sometimes the candidate doesn't know what he or she wants, and some gentle, helpful guidance towards suggesting some interests may be useful. The fact that the newcomer may not immediately know what he or she wants to do should be seen as an opportunity, not a hindrance.

- Not only seeks out quality candidates (surprisingly, the Internet is a quality forum for recruiting technology hobbyists, at least relative to society as a whole), but also works tirelessly towards also making our existing members into model amateurs (Novice exams are now under the VE program, so the "car-hood" example is no longer valid. The fact that someone got a bad introduction to amateur radio means that we should do *more* work to make them feel welcome, not less).

- Assumes that there are never enough Elmers, and there is never such a thing as "enough Elmering" for an individual. Anticipating the questions before they are asked (as sometimes the newcomer is afraid to ask or doesn't have enough knowledge to know what to ask) is sometimes almost a necessity.

- Is mindful of the fact that other business and organizations recognize the member as a customer. The 60's/70's model of the customer being an infinitely-renewable resource from which the luxury of being able to pick-and-choose exists, is rapidly being discredited. Instead, many groups are actively reaching out to individuals and letting them know that, yes, they are welcome, and that there is a place for them, even if that place it to suggest, or participate in, changes that transform the group beyond its original form. This doesn't mean compromising technical/operating standards or regulations. Rather, it means welcoming new members with an open mind and heart, and valuing their input, even if it doesn't always square with yours.

My "2 mile long" Elmers List has only 250 names (probably 150 names after March 1997). That's a scant 1/20th of 1% of all U.S. Amateurs. That's nowhere near enough, especially when you consider that amateurs, and potential amateurs, in *15* U.S. States (and quite a few Canadian Provinces and foreign countries) have no one local to turn to on my list. Since someone has commented on its length, this might be a good time to bring up a concern of mine. Specifically, that while the Elmers List originated on Usenet, it's getting a bit too big to be practically posted to Usenet News every month in its entirety. The WWW version is getting increasingly popular and is much more convenient to use, with its keyword searching and hyperlinked indexes. Furthermore, this thread has also brought up the interesting argument that its sheer size (at least by Usenet standards) may be giving the false impression that "enough is being done" with regard to Elmering.

Perhaps it's time to pare down the Usenet posting to just a pointer article and continue to make the full list available via FTP, mail-server, and WWW.

The obvious cons have been mentioned above. However, there still are a few pros to continuing the list on Usenet News:

- Since it is registered (and cross-posted) in the news.answers system of newsgroups, it gets automatically archived via FTP as well as reformatted into several (often keyword indexed) WWW pages. This is less of an advantage now that I have a keyword-index WWW page of my own, but it does help offload demand onto other sites, as well as increasing this resource's visibility overall. If I just post a pointer article, that means that I'm depending solely on my own site for WWW, FTP, and E-mail server retrieval of the entire directory (No, posting just to rec.radio.info, or the news.answers system, is not an option, as it goes against their charters and posting guidelines, which require that their newsgroups merely serve as a filter or mirror of what's posted to Usenet News in other groups anyway).

- Not everyone can FTP or WWW. An FAQ-type posting that seeks to help those on Usenet News should have some sort of presence in that medium This is becoming less of a concern with the growth of the WWW (and the fact that most new users on the Internet are using the Web versus Usenet News), but I'd like to get some more feedback on this one.

I'd be willing to entertain pros and cons and act on the net's overall consensus over the next few months.

Why is it that in all these lines of text no one mentions the ITU,
which requires CW for operation below 30 Mhz?

Or have we forgotten that HF signals travel outside the US?

Quit wasting your time......

2965. Ham Radio License Proposal #1

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-09 00:00:00 UTC
From: jim@rst-engr.com
Message-ID: <58hmj0$ei@li.oro.net>
Source record: 210674

I've been thinking for a while about this ham radio licensing scheme we've concocted in this country and have come to some conclusions and some opinions that are mine and mine alone. This is the first of those thoughts, and I certainly don't think I've got the only key to the ultimate answer. Thoughtful comments gratefully acknowledged and encouraged.

Presumption -- that we don't want a total overhaul of the current system, but a better way of doing what we are doing now. Keep the current band and subband divisions that we have today.

Divide the amateur examination universe into four distinct regions: rules, phone, cw, and "other". "Other" can be the total potpourri of amateur radio -- SSTV, digital, Oscar, RTTY, mobile, and just about any other catchall subject you wish.

Modify the current structure to eliminate the Technician class. Keep Novice, General, Advanced, and Extra (don't worry, you'll hopefully see the logic later on). Grandfather today's Technicians into the General class.

The question pool can be very similar to today's pool, and I'll take care of the "rote memory" problem in Proposal #2, but for now, just follow along. There are three question pool areas: rules, phone, and other.

Each question is rated as a certain number of "points". Easy questions have a low number of points. Hard questions have a high number of points. The point system is set out on a national level, so that the question-makers do the point assignment.

Passing any one class requires that you take the exam in the three areas, and you must achieve a certain minimum score in the rules area to pass. You CAN pass the exam by doing very well in all of the three areas. You can also add to your score, if necessary, by taking a CW exam, a certain number of points for each WPM.

Consider a diehard brass man that could care less about phone. He rips along at 25 wpm and totally blows off the phone part of the exam. He passes.

Consider the technonerdy that couldn't care less about CW. He aces the phone and other part of the exam. He passes.

There are holes in this idea that I'll try and patch in Proposal #2. One of them is how to keep the goofballs and garbage mouths out of the system.

Roger J. Buffington, W6VZV (rogerjb@ibm.net) wrote:
: Although I normally am in favor of majority rule, a couple of
: comments to the rumor (I will not accept it as fact, because I don't know it
: to be) that a recent ARRL poll showed that most members want the CW
: requirement for HF privileges retained.

: 1. Self selected polls are notoriously inaccurate, and no one who
: has a working knowledge of statistics would accept a poll in which the
: respondents are those who must affirmatively phone or mail in their
: responses. "Dewey defeats Truman," remember?

Also, I'd like to see the raw numbers, rather than just the percentages. For the most part, it is difficult to get people to respond to surveys, so I'd want to see the number of surveys returned, versus those sent.

And, although ARRL attempted to solicit the opinion of non-members, I can't see how they could effectively reach prospective hams, who would probably vote against the continuation of the code requirement. Do we know how many surveys were sent to this population, and how they were targeted?

: 2. Sometimes an organization must lead, rather than follow, public
: opinion. The CW requirement is killing our hobby by starving it of new
: members, and diverting young people (potential hams) away from
: amateur radio to the internet. This is not desireable. ARRL should act in
: the best interests of amateur radio and work to eliminate the CW
: requirement. It has no rational basis, now that CW is essentially a thing
: of the past everywhere but for recreational amateurs. The "service"
: component of our hobby, i.e. nets, mars, etc., has long since abandoned
: CW. It is just about never used in disaster communications.

If that were the case, ARRL should not have done the survey at all. Since they did the survey, they are somewhat obliged to abide by the results. We had a similar situation in another organization that I belonged to, where a survey was taken and the Board decided to take their own direction, contrary to the recommendations of the membership at large. This led to large numbers of members terminating their memberships, and a near recall of the entire Board of Directors. I don't think ARRL wants to invite *that* sort of criticism.

I'd be agreeable to dropping the code requirement in place of a rigorous written exam, perhaps the level of the current Advanced Class exam. Give those who qualify the General and Advanced phone portions of the band. Continue the code requirement for those who want CW privileges, preserving, or perhaps expanding the Extra portion of the CW band, and requiring the current level of theory and code proficiency.

Face it, although some will always end up disgruntled, working out a compromise that is accepteble to both sides of the issue and presenting it to ARRL and FCC is going to accomplish more that the "I want it all, and I want it now" attitude.

>
I am involved with putting up a repeater also, but it is the
uncoordinated *REPEATER*
that must take care of interference. The individual operators (simplex
or repeater users) do not get coordinated, thus there is not a
coordinated versus uncoordinated standing there. They are operating
under the FCC band limits, and not under other band plans. I try to
operate as a gentleman under gentleman's agreements, but I'm not so sure
that these can be dependably applied to those who want to play lawyer.

The burden is still not on the users to move (legally), although
(un)common courtesey would indicate this as the normal procedure. If
they were using the input frequency, but a different ctcss tone, then
the machine would not step on them, although the machine might not
capture the normal users either. I have found that the polite
explanation route usually works, but the repeater users no more right
transmit on the repeater input than anyone else does (the users are not
coordinated, and it is they that would be generating the intensional
interference to the existing QSO). Th repeater users, also, should wait
for the frequency to clear (if they KNOW that it is busy, or else they
are causing INTENSIONAL interference). Again, hopefully most of the hams
without an axe to grind will understand - if asked to move and not
told! As for the others, all hobbies have some of them!

2975. Ham Radio License Proposal #2

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-09 00:00:00 UTC
From: jim@rst-engr.com
Message-ID: <58huge$e7a@li.oro.net>
Source record: 210684

There is another Federal agency that has much to recommend itself as regards licensing schemes. I wish I could say as much regarding its regulatory and enforcement faces, but that's another thread. I refer to the FAA system of certificating pilots.

When you get a pilot's license, it can come with a staggering number of options. There are private pilots, commercial pilots, airline transport pilots, and flight instructors. Each of these can have instrument, glider, land, sea, single-engine, and multiple-engine ratings attached. The thrust and concept is one of intent. Why should we test all pilots on glider operations if they never intend to fly gliders? Why teach ancient tailwheel aircraft techniques to modern pilots who will fly "training wheel" (nosewheel) aircraft all their careers? And if they choose to go back and get tailwheel instruction so that they can legally fly tailwheel aircraft, that is the option of the pilot concerned.

Let's see what we can gin up with the amateur radio license if we structure it something like the pilot scheme. I'm going to give the FAA name in capitals, and the [corresponding fcc name in brackets]. Oh, I'm taking some liberties with the FAA system, so you CFIs out there, cut me some slack. I'm trying to make this EASY for people to understand.

We have your learner permit, the STUDENT pilot license [novice]. It never expires, but it requires the oversight of an INSTRUCTOR pilot [instructor] every so many days. Some students [novices] go their whole careers without ever moving up, but their activities are continuously monitored by their instructor who is pretty much responsible for what the novice does.

Your basic PRIVATE pilot [amateur radio operator - "aro"] comes in two basic flavors, airplane or glider [phone or cw]. If you have an airplane [phone] rating, you can fly [transmit] anything up to a certain gross weight [output power]. Nothing in the book prevents an airplane [phone] pilot from going back and getting a glider [cw] rating if they want to use both kinds of equipment.

However, to go from STUDENT [novice] to PRIVATE [aro] involves both a written -and- a practical exam. It takes a signoff by the instructor -and- a practical exam by a DESIGNATED EXAMINER [examiner] to get that piece of paper. (We'll talk about instructor and examiner ratings in a bit.) Limitations on the student certificate? How about the first 20 kHz. of any segment for which the student is studying (phone or cw)?. How about 50 watts below 30 MHz. and 5 watts above?

Now, I'm not saying that a few goofballs haven't gotten a private pilot's license, but the combination of a recommendation by a person who stands to lose their instructor rating and an exam by a person who stands to lose

their examiner rating keeps out the vast majority of clowns. And, it's not personal. You have your choice of ANY instructor and ANY examiner you want. If ten of them in a row tell you that you shouldn't be in the left front seat, most people get the hint.

How about some limitations on the basic amateur radio operator certificate (aro)? Any amateur band segment for which you are rated. For phone aro's this is the phone segment. For cw aro's this is the cw segment. You can, if you wish, get a dual rating and use both. How about 100 watts maximum.

The private pilot certificate is good for life, but has to be renewed for currency every two years (biennial) with a flight review by an instructor who is only concerned that you still remember how to fly safely. If you don't pass, you don't lose your certificate, but you can't use it, either. I'm not sure how to factor this into the aro equation. Any suggestions?

Power up to the legal aro limit would be a rating on the certificate, once again, after a written and practical exam. The exam would most probably cover TVI, high voltage practices, safety, and all that good high power stuff.

There are refinements needed in this scheme. Is TV simply a subset of phone? Is digital a subset of cw? Or should there be separate ratings for each?

Being an instructor pilot or an instructor aro is an honor and a privilege that is gained after experience, knowledge, and another series of written and practical tests. And, the instructor can only teach what is on his certificate. If you are a power plane pilot, you can only teach power planes with your instructor rating. If you are a cw only aro, you can only teach cw to the novice. In addition to the biennial flight review required to renew your pilot's license, the instructor pilot has an additional biennial review for his his instructor rating which can be satisfied by a flight test OR classroom study (or by having X number of students in that time with a Y% first-time pass rate). I think this is a good idea for aro instructors also, the renewal (and learning experience) of a periodic renewal of the certificate, OR being active enough with a high enough pass rate for the students.

Finally, 2% to 3% of all flight instructors are granted examiner status by the FAA. For all of Northern California, there are something on the order of 100 examiners, each one designated by the FAA after a long time in the saddle teaching. Each one can, on his or her own hook, issue a rating on the spot after the required (standardized) practical examination. And, quite frankly, the examiner rating is considered somewhat of a plum, in that the examiner can charge what he damn well pleases for the ride. I'm not proposing that we price amateur radio out of business, but an hour of a person's time is worth something OR the examiner can simply do it for free out of the sheer love of the profession/hobby. That and there ARE examiners who will do the job pro-bono for low-income people who are motivated to become pilots. That will shake itself out eventually.

Examiners are required to attend annual refresher courses at the FAA site. We could certainly do the same thing at the FCC field offices.

Bottom line proposal --

Novice class license with phone or cw privileges on all bands, unlimited life, but continuous monitoring by an instructor.

Amateur radio operator with phone and/or cw privileges on all bands, unlimited life, periodic reviews, ratings for power and other modes.

Instructor operator who may teach anything his operator certificate is rated for, periodic reviews, can sign off novices to take the aro examination and aro's for additional ratings.

Examiner who is, in essence, a "super instructor" and the quasi-official representative of the FCC in licensing matters.

Oh, I knew I forgot something. The FAA designates about 10% of its instructors as "aviation safety counselors". Some see it as a proving ground for becoming an examiner, some see it differently. The function of an ASC is to gently counsel an errant pilot into the warmth and wisdom of the regulations should the ASC see a violation of the regs. The ASC has absolutely NO enforcement powers, but should the errant pilot tell the ASC to blow wind, the normal course of events is for the ASC to write up the incident and send it down for official enforcement action.

At one time, we probably called that an Official Observer in ham radio, but that was a private organization's designation, not the FCCs. And, there were no real qualifications to be an OO other than interest. I propose to have certain instructors designated something ("observer" carries the connotation that I'm looking at you through the drapes, "monitor" says that you'd better watch your step, buster) innocuous and is, in essence, a friendly hand on the shoulder. Counselor is a fine term, and one we might consider.

Therewith my observations. Flame away. Oh, I studiously avoided saying "The ARRL should do this" or "The ARRL should do that". The ARRL is not the government. None of this concept needs any sanction of this or any other group. It stands on its own.

IEEE's COMPCON 97 Set for Feb. 23-27 in San Jose

Visit the COMPCON 97 World Wide Web page for more information and/or to register:
URL: http://www.compcon.org

or read the following :)

SAN JOSE, Calif., -- One of the country's pre-eminent computer technology conferences -- Compcon 97 -- will be held February 23-26, 1997 here in the heart of the Silicon Valley. This continues a tradition of more than 40 successful years in the San Francisco Bay Area for this non-profit technical conference.

"Hot Systems/Cool Software" is the theme of COMPCON 97, underscoring the importance of new computing technologies and applications in both the computer industry and society.

"Computer technologies ranging from world-record 600MHz processors to eye-catching Java applets and VRML virtual worlds will all be featured at COMPCON 97," said Darrell Long, the conference chair and computer science professor at University of California-Santa Cruz. "COMPCON has the reputation as a one-stop, no-hype overview of the important developments in our industry. If you could only attend one technical conference a year to learn about the overall state of the industry, COMPCON would be your choice."

Adds Dr. Joel Birnbaum, Vice President, R&D and Director of HP Labs: "COMPCON has been consistently a valuable conference presenting a broad technical program on state-of-the-art computing technologies."

IEEE COMPCON 97 will be held at the San Jose Hilton and Towers Hotel (300 Almaden Blvd.) in downtown San Jose, Calif.

COMPCON is sponsored by the Institute for Electrical and Electronics Engineers (IEEE), a non-profit professional association, and has been held in the Bay Area annually since 1955.

Its 27 technical sessions and six in-depth tutorial topics run the gamut from the design of advanced central processing units and networks to computer systems, advanced programming and world wide web technologies. In addition, five well-known industry luminaries will give plenary talks. COMPCON has no marketing presentations or product exhibitions.

COMPCON 97 program overview:

INTERNET/INTRANET TECHNOLOGY: Trends, Environments, Applications

SYSTEMS: Superservers, Mobility, Software Architecture

MICROPROCESSORS: High-Performance, Low-Power

INTERCONNECTS: Parallel Computers, LAN and WAN, Wireless

VIDEO: Advanced Displays, Digital

MULTIMEDIA: Technologies, Software Environments, Applications

PARALLEL/DISTRIBUTED SYSTEMS: Applications, Hardware, Compilers

OPERATING SYSTEMS: Object-Oriented, Microkernels

PERIPHERALS: Mass Storage, DVDs, Display Technologies

EMERGING TECHNOLOGIES: GigaHertz Devices, Advanced Hardware, Java

Tutorial topics include: 3-D graphics, virtual reality, web site design and security, advances in computer architecture.

Plenary speakers include:

Federico Faggin (Synaptics) -- "The Microprocessor: Its History and Future"

Hector Garcia-Molina (Stanford) -- "Meta-Searching Across the Internet"

David K. Gifford (MIT and OpenMarket) -- "The Future of Electronic Commerce"

Ted Laliotis (Laliotis and Associates) -- "To Tax or Not to Tax Internet Transactions"

Dave Nagel, AT&T

Advance reservations to Compcon 97 can be made through the web site or by contacting:

Well, I looked it up, and found that if you:

"Click here for Download HAMshack 1.0 - 2.9 MB (this version expires in 1
mount arter install)" (sic)

Then you can:

"Click here for Register Online ($98 US)"

And that "Borovikov"
<borovikov@balti-n.estpak.ee>
did not exactly provide the usual disclaimers when suggesting
http://www.balti-n.estpak.ee/hamshack

Unlike many, I don't mind shopping on Usenet. I do think Borovikov
should mention that the software is for sale, and that he is doing the
selling!

>"follow the money". You can bet there is a profit in it, otherwise
>Maia wouldn't be doing it.
>
>

Quoting snippets and attacking based on the snippets does produce unfair results, note that I stated I suspected that he got less than one in ten to respond at best. To figure out his true costs, you have to include the numbers of hams who won't or don't bother to respond. In other words, ten times 20 cents or so produces $2.00 as a true cost, and personally I suspect that is operating costs are slightly more than $2 per ham who sends in a response, but hey. Note also, there is no legal or moral obligation to send the 610 back to W5YI, one could just mail it to Gettysburg, and have spent exactly 32 cents plus envelope cost.

If there is a profit, so what, I'm no Maia fan, but the FCC found it too expensive to do for free. Of course, I also wish that the FCC would go back to its old system of updating the expiration date based on the last action carried out, which made sense. I have never had to renew an expired license, because I moved regularly and sent in a change of address form. Oh well! -art clemons- nb8lk/3

You can't match the antenna to the amp with the tuner positioned between the rig and the amp. The rig should match the amp's 50 ohm input without a tuner. Put a tuner suitable to handle the power level between the amp and the antenna. By the way, if the amp has "tune" and "load" controls and the antenna is near 50 ohms (resonant dipole, beam, etc) then you probably won't need a tuner at all- the range of the tuning controls on the amp will match an antenna that is not too far off.

2983. Cushcraft A3S Tri-band Beam

Remarkable. By your reasoning, I can fire up anywhere I want. Just like
that arrogant Andrews operator.

Drivel!

The military is often arrogant and will do anything that you can't
prevent. I know, spent a fair amount of time in the military (Navy if it
matters) and there is no end to the stupid and arrogant things they will
do.

At the very least, the various stations monitoring the transmission
should have sent in letters of protest.

Pantywaists like you who won't defend their privilege are the real
reason
we as a citizenry are losing various rights."Don't do anything to them
or they might do something back" or you might offend them...
This nation wouldn't have gotten past 1777 with that attitude.

Michael P. Deignan (kd1hz@anomaly.ideamation.com) wrote:

: In the mid-80's, a similar poll was taken of ARRL members, and an
: overwhelming majority of ARRL members supported retention of the CW
: licensing requirement for all ham bands. Nonetheless, the ARRL
: supported the VHF codeless license (albeit in a different form than
: it is today) despite the wishes of the membership.

And I wonder if they have come to regret that position? If our club (~185 members) is a representative sample, the no-coders are *not* joining ARRL in any significant number. They are also dying on that class of license. If the no-code Technician license was intended to be entry level, and the term "incentive licensing" still holds any meaning, then ARRL's view to the future is not very accurate.

Obviously, if more no-coders were ARRL members, the results of the vote might well be different.

: The people running the ARRL are not stupid. They know where the
: gravy train is. They don't want to have to go out in the real world
: and get a real job (hi Ed!) after having that nice comfy job in
: Newington. If that means they can increase sales of study materials
: and other book sales (how many pages in the latest issue of QST?)
: than they will support it.

: Remember the addage: "Follow the money".

Again, they may be selling more "Now You're Talking" books, but aren't getting members in any number.

: >I haven't seen a flood of new blood doing research. All I have seen is a
: >bunch of no-code Hams who use 2 meters like the CB band.

One of the arguments that is often heard on these newsgroups, is that the code requirement is "keeping brilliant people who will enhance the state of the art" out of ham radio. I haven't noticed this among our club's no-coders, or those who get their license through our VE team.

: Yup. And soon they'll all be on HF calling for elimination of those
: "hard" theory examinations that restrict their access to certain power
: limits and segments of the bands.

That's just human nature, especially in these "I want it all, and I want it now" times. How long do you suppose it would be, once no-code Generals overwhelmed the voice subbands, that they would want the CW/digital subbands for phone, "because CW is outdated?"

Paul W. Schleck K3FU (pschleck@oasis.novia.net) wrote:

: - Not only seeks out quality candidates (surprisingly, the Internet is a
: quality forum for recruiting technology hobbyists, at least relative to
: society as a whole), but also works tirelessly towards also making our
: existing members into model amateurs (Novice exams are now under the VE
: program, so the "car-hood" example is no longer valid. The fact that
: someone got a bad introduction to amateur radio means that we should do
: *more* work to make them feel welcome, not less).

Why do you say "surprisingly?" Before Internet access became available to the masses, unwashed and otherwise, via AOL, Prodigy and local ISPs engaging in price wars, just getting on the 'Net was something of a technological accomplishment. Many of us 'Net OTs began our experience with a shell account on a Unix box, an experience not for the faint of heart. When you consider that 'Net access used to be through universities and high-tech industries for the most part, it doesn't surprise me in the least.

: My "2 mile long" Elmers List has only 250 names (probably 150 names
: after March 1997). That's a scant 1/20th of 1% of all U.S. Amateurs.
: That's nowhere near enough, especially when you consider that amateurs,
: and potential amateurs, in *15* U.S. States (and quite a few Canadian
: Provinces and foreign countries) have no one local to turn to on my
: list. Since someone has commented on its length, this might be a good
: time to bring up a concern of mine. Specifically, that while the Elmers
: List originated on Usenet, it's getting a bit too big to be practically
: posted to Usenet News every month in its entirety. The WWW version is
: getting increasingly popular and is much more convenient to use, with
: its keyword searching and hyperlinked indexes. Furthermore, this thread
: has also brought up the interesting argument that its sheer size (at
: least by Usenet standards) may be giving the false impression that
: "enough is being done" with regard to Elmering.

Feel free to drop some e-mail in my mailbox, and I'll add myself to your list of volunteers. For that matter, our club, as well. We have classes in code and theory that, recently, covers all the territory through Extra Class.

: Perhaps it's time to pare down the Usenet posting to just a pointer
: article and continue to make the full list available via FTP,
: mail-server, and WWW.

Don't forget, there are still a number of hams who have no WWW access. For example, we have advocated that all club members who have a computer and modem get connected with the e-mail-only Juno service. Considering the value of your documents versus the 80-90% of pure crap that's out there, I

wouldn't feel guilty about using the bandwidth.

: The obvious cons have been mentioned above. However, there still are a
: few pros to continuing the list on Usenet News:

: - Not everyone can FTP or WWW. An FAQ-type posting that seeks to help
: those on Usenet News should have some sort of presence in that medium
: This is becoming less of a concern with the growth of the WWW (and the
: fact that most new users on the Internet are using the Web versus
: Usenet News), but I'd like to get some more feedback on this one.

The Web is fine for looking up information or downloading, but the usenet newsgroups still show high activity. I'm probably reading and posting to usenet 80% of the time, versus 20% on the Web.

Actually, "clear" means that one has finished using that frequency for the purpose of the prior conversation, and doesn't preclude staying around to monitor the frequency.

The term "out" indicates that one is leaving the air.

Hi Chris, I have an advanced class license and CW is my favorite mode.

IMO, people who take your above attitude simply want something for nothing. They would rather take the easy way out and learn an easy, relatively useless skill like CW than to do the slightly more difficult task of learning something that will do them some good, like detailed knowledge of electronics. Too lazy to learn electronics? Substitute Morse code and give the government a perfect reason to do away with ham radio.

Of course, if they hadn't conducted the poll, they would have been faulted
for living in some "ivory tower."

If they had ignored the results of the poll, they would have been faulted
for maintaining some "hidden agenda."

But because they did conduct a poll and are abiding by it, they are being
faulted by those who simply disagree with it. ::sigh::

I'll have to get the flack jacket out for this, but I think the code
should be required if you plan to use it or not. No, learning the code
isn't easy, but if something is important to you, you will expend the
effort. Learning theory to build a transmitter wasn't easy either, not
copy ARRL plans but to build one with existing componants, but I wanted
to do it, so I learned. Learning organic chemistry wasn't easy either,
but the degree was important, so I learned it, haven't used it, but I
learned it. My mother made me take typing, it was a major battle, I
was never going to do my own typing, why should I learn to do that.

It took me over 50 hours of concentrated effort to pass the 13 wpm, I
thought I was one with a medical condition I had so much trouble, but
then I got serious. I had been doing the 20 minutes a day for 6
months, but didn't take. An hour before work, lunch, and hour or two
after dinner for 2 weeks did the trick, I passed the 13 wpm and got the

Advance license.

If it is important to you to get the license then quit complaining and learn the code, you can if you want to, quit fighting it and as Nike says just do it. The more you have to work for something the more you will value it. Our society has proven just how well people respond and how much respect something gets when it is just given away. Look at CB during sunspot highs. I don't care if CW is outdated, I don't care if you will never use it, I don't care what your excuse is, I want people on the air that wanted a license enough to WORK for it. Many argue they will work on learning more technical issues and want a more technical test, I agree, however look at the background of these people, they already know the technical part, that is why they want it, they don't want to have to learn anything else different, or remotely challenging to get the license. I think hams should be required to retake the test every 5 years, both code and theory, after all the theory is constantly changing, and they should remember how much they want that license to continously work for it. I think this is the problem on 14.313 and 75 meters, they have forgotten how important the license is. No, learning the code doesn't make you a better ham, but it at least shows that you want to be a ham enough to expend some effort to learn.

If the FCC decides I need to learn to program a PAL to get my license, guess what, I will learn how to program a PAL, if they want me to learn to print backwards, I will do that, the license is important to me, and I will do whatever it takes to get the license. Quit trying to get it free, and work for it, you will be more proud of it, and treat the service with some respect.

Jim Weir (jim@rst-engr.com) wrote:

: Presumption -- that we don't want a total overhaul of the current system,
: but a better way of doing what we are doing now. Keep the current band and
: subband divisions that we have today.

OK, I'll wait to hear further proposals before commenting on this one...

: Modify the current structure to eliminate the Technician class. Keep
: Novice, General, Advanced, and Extra (don't worry, you'll hopefully see the
: logic later on). Grandfather today's Technicians into the General class.

I'm concerned about your proposal to grandfather those who took only an entry-level theory exam; an exam designed to (hopefully) ensure that they had a basic understanding of regulations, operating procedures and didn't harm themselves or any other person.

After all, no one seemed to agree that Generals, who had earned full privileges under the existing system, should have been grandfathered to Extra back in the late '60s. This has stuck in my craw since then.

: Consider the technonerdy that couldn't care less about CW. He aces the
: phone and other part of the exam. He passes.

Labeling someone as "technonerdy" may not be taken as a compliment by all, and will just deteriorate the S/N on responses to your proposal. Shall we say simply "for those who are not interested in CW..."

My view so far: it's going to take proposals such as yours, and a *lot* of negotiating and give-and-take on both sides of the CW issue, to come up with something that will be palatable to all concerned. Overall, we'd all come out of this dilemma feeling a lot better than if one side or the other got "their way" without giving something up.

Looking forward to part#2,

I have to agree there. I used the word "lemmings" quite appropriately in describing people who, without listening to the freq and understanding what is going on, are ready to go marauding about the countryside with torches to "clean up" the frequency.

The guys that hang out there seem generally to be some of the nicest guys on 75. Sure, they like a little action when people like WB2OTK bring it to them. Who is going to let themselves be run off the frequency?

I can't even bring myself to repeat some of the WB2OTK stuff, but this guys is truly nasty and it is enough to drive some people to the brink of violence. You just gotta listen to the guy and then form your opinion. Guys like Big Al are just reacting to this assault like many of the rest of us would....although lots of us are just afraid to admit it. He seems like an okay guy if you just do a little listening.

Jim Weir (jim@rst-engr.com) wrote:

: We have your learner permit, the STUDENT pilot license [novice]. It never
: expires, but it requires the oversight of an INSTRUCTOR pilot [instructor]
: every so many days. Some students [novices] go their whole careers without
: ever moving up, but their activities are continuously monitored by their
: instructor who is pretty much responsible for what the novice does.

I disagree that any entry-level license should be renewable. If, as you propose, CW testing becomes an option, you have removed what many consider to be a major disincentive to upgrading. Remove that barrier, give 'em five years to upgrade or go off the air; that should be ample time for anyone to do so, and is probably over-generous.

That's a major complaint that many have about the no-code Technician license. Too many hams get to that point and never advance any farther. For those who seriously enjoy the realm of 50 MHz and above, and it can be exciting, ammend the current Tech+ exam to be equally difficult as the General exam, but focused on techniques unique to VHF and above.

: Your basic PRIVATE pilot [amateur radio operator - "aro"] comes in two
: basic flavors, airplane or glider [phone or cw]. If you have an airplane
: [phone] rating, you can fly [transmit] anything up to a certain gross
: weight [output power]. Nothing in the book prevents an airplane [phone]
: pilot from going back and getting a glider [cw] rating if they want to use
: both kinds of equipment.

I like the idea of an endorsement. It makes sense on the commercial license structure.

: However, to go from STUDENT [novice] to PRIVATE [aro] involves both a
: written -and- a practical exam. It takes a signoff by the instructor -and-
: a practical exam by a DESIGNATED EXAMINER [examiner] to get that piece of
: paper. (We'll talk about instructor and examiner ratings in a bit.)
: Limitations on the student certificate? How about the first 20 kHz. of any
: segment for which the student is studying (phone or cw)?. How about 50
: watts below 30 MHz. and 5 watts above?

: Now, I'm not saying that a few goofballs haven't gotten a private pilot's
: license, but the combination of a recommendation by a person who stands to
: lose their instructor rating and an exam by a person who stands to lose
: their examiner rating keeps out the vast majority of clowns. And, it's not
: personal. You have your choice of ANY instructor and ANY examiner you
: want. If ten of them in a row tell you that you shouldn't be in the left
: front seat, most people get the hint.

So far, so good...

: How about some limitations on the basic amateur radio operator certificate
: (aro)? Any amateur band segment for which you are rated. For phone aro's
: this is the phone segment. For cw aro's this is the cw segment. You can,
: if you wish, get a dual rating and use both. How about 100 watts maximum.

Again, OK by me...

: The private pilot certificate is good for life, but has to be renewed for
: currency every two years (biennial) with a flight review by an instructor
: who is only concerned that you still remember how to fly safely. If you
: don't pass, you don't lose your certificate, but you can't use it, either.
: I'm not sure how to factor this into the aro equation. Any suggestions?

I like the idea of recertification. As you probably remember, we had to certify our ability to copy code at the appropriate speed when we filled out a form 610 for renewal some years ago.

Now that I'm teaching an Advanced class at our club, it's evident that I would have some difficulty passing this element without substantial review. The teacher is again the student. Part of the difficulty is the transition from tube technology to solid-state and digital devices in the nearly 30 years since I passed my Advanced exam, but I can't honestly say that I haven't forgotten quite a bit of the theory.

: Power up to the legal aro limit would be a rating on the certificate, once
: again, after a written and practical exam. The exam would most probably
: cover TVI, high voltage practices, safety, and all that good high power
: stuff.

Good place for an endorsement.

: There are refinements needed in this scheme. Is TV simply a subset of
: phone? Is digital a subset of cw? Or should there be separate ratings for
: each?

Digital is somewhat plug-and-play, and should be relatively easy to use by one who is familiar with a landline BBS, or with the Internet. TV, and other specialized modes require some further study into their theory and operational procedures. I could go either way here, as far as an endorsement.

: Being an instructor pilot or an instructor aro is an honor and a privilege
: that is gained after experience, knowledge, and another series of written
: and practical tests. And, the instructor can only teach what is on his
: certificate. If you are a power plane pilot, you can only teach power
: planes with your instructor rating. If you are a cw only aro, you can only
: teach cw to the novice. In addition to the biennial flight review required
: to renew your pilot's license, the instructor pilot has an additional
: biennial review for his his instructor rating which can be satisfied by a
: flight test OR classroom study (or by having X number of students in that
: time with a Y% first-time pass rate). I think this is a good idea for aro
: instructors also, the renewal (and learning experience) of a periodic
: renewal of the certificate, OR being active enough with a high enough pass
: rate for the students.

: Finally, 2% to 3% of all flight instructors are granted examiner status by
: the FAA. For all of Northern California, there are something on the order
: of 100 examiners, each one designated by the FAA after a long time in the
: saddle teaching. Each one can, on his or her own hook, issue a rating on
: the spot after the required (standardized) practical examination. And,
: quite frankly, the examiner rating is considered somewhat of a plum, in
: that the examiner can charge what he damn well pleases for the ride. I'm
: not proposing that we price amateur radio out of business, but an hour of a
: person's time is worth something OR the examiner can simply do it for free
: out of the sheer love of the profession/hobby. That and there ARE
: examiners who will do the job pro-bono for low-income people who are
: motivated to become pilots. That will shake itself out eventually.

While we should keep the examiners to the cream of the crop, I think you will have a practical problem with all of these additional endorsements versus a limited number of examiners. The maintainer of the Elmer list just stated that large portions of the country are unrepresented. I don't think this is the case with the current VE system. If there isn't a reasonable supply of certified examiners, testing sessions are likely to be overcrowded and held less frequently, as in the old system when all exams above Novice level were given at FCC offices.

: Novice class license with phone or cw privileges on all bands, unlimited
: life, but continuous monitoring by an instructor.

Not sure that I can accept renewability of an entry-level license...

: Amateur radio operator with phone and/or cw privileges on all bands,
: unlimited life, periodic reviews, ratings for power and other modes.

: Instructor operator who may teach anything his operator certificate is
: rated for, periodic reviews, can sign off novices to take the aro
: examination and aro's for additional ratings.

: Examiner who is, in essence, a "super instructor" and the quasi-official
: representative of the FCC in licensing matters.

I can't find too much fault with your proposal. Good effort!

It's something that I would feel comfortable endorsing, with the one exception that I noted. While I'm essentially an advocate of code, what you've said makes a lot of sense.

Pete:

I am sorry that you view my reply as unconstructive. After all, the
point is to "find out what is going on on 3894.5 and to do something

about it", right?

Well, some of us have *some* idea what is going on and judge somewhat harshly those uninformed stone-throwers that love to jump on any seemingly politically-correct bandwagon. Just look at the responses to your post! These reactionaries are far more dangerous than a bunch of guys hanging around on the radio having fun.

You are right about my rump....I do NOT see myself as some puritan out to save the world from anyone who, in my infinite wisdom (read:20 seconds of listening) is a danger to amateur radio. Never have....never will.

I would like to get in touch with anyone well acquainted with the Midland 77-117. This is a CB transceiver that also receives VHF weather channels. Specific questions I am seeking answers to are:

1. Do the CB and WX receivers share a common IF? Just how much circuitry do the two have in common?

2. Does anyone have a schematic handy? Is one included with the manual?

3. How well does the receiver perform, both at HF and VHF? Specs?

On the subject of bizarre ham habits:
I agree about the CW abbevs and "W2XYZ for ID", but saying "nothing heard" is just another (maybe strange)way of saying "I give up. If someone else is waiting to make a call, go for it" I think that is a courteous way to operate. Otherwise, others waiting to make a call don't know for sure when the calling party is done and just have to wait for some arbitrary period.

My personal habit is to say, after a couple of unsuccessful calls, "K9XK clear", but there are a zillion ways to do it.

How about a couple more weird habits, like always saying "We" when you really mean "I", and saying "73s" instead of "73". These are probably the two most popular weird ham habits.

If you want to blame someone for this mess try the fcc. The main jerk whipping all this up is richard whiten,wb2otk. This individual skipped out on a 10,500$ nal that was issued for guess what? That's right,qrming. He is representative of the downfall of ham radio right into the gutter. You can either stand by or try to get this idiot in conformance with part 97. Our court system can't even get this idiot to pay his fine much less conform to arule or regulation. And believe me, the fcc will point to this mess and use it to justify the sale of your spectrum. So everyone should try to blame who is responsible. In order 1.wb2otk,2.fcc,3. uninformed people who add to the qrm and don't give a callsign,which is about 90% of the people on this frequency. KD4CDB

3002. CW on hold on ham store phone?

(tech+ for 21 years)

The future looks very bright for HF, Carl. We lost a band (11m) back in the late 50s, but since then we've gained *so* much (full 160m, 12m, 17m, and 30m), and there's a proposal onboard to give us even more MF/HF spectrum. So don't worry yourself about code and HF in regards to the coming century. It's such a pity, though - you'll be on the outside looking in.

73 from Hawaii,

Well, here in the nation's 11th largest city, all our services are still
living on VHF/Hi. And apparently some California agencies will remain
on that band for some time to come, such as the very large
California Department of Foresty and Fire Protection, who provides
fire services to a good number of rural Cal counties.

If you can only find one (or one dozen) "bad" HF freq'ys out of the
3.75 megaHertz of HF spectrum I'd say we're doing very good.

Now try to find a "bad" freq'y in any of the CW segments.

This is very old news. PFF put forth this plan, I think, about a year and half or maybe two years ago and it got lots of press at the time. You throw this out as if this is some new, done deal. Its not a done deal. Its a report from a think tank that does policy analysis and which is affiliated with Rep. Newt Gingrich. This is hardly a done deal at all. Obviously there are many issues about which ham radio operators should be concerned and this one falls somewhere down the list.

>I note that they charge the same for a library to subscribe to QST
>as they do for a membership with QST. Now, that isn't fair, as a
>library doesn't get membership benefits.

Library subscriptions to journals are usually *much* higher than
for individual subscriptions. For example, four issues (a one year
subscription) to the American Mathematical Society's research journal
BULLETIN is $217; for a library to receive those same four issues they'd
have to pay over $400. Why? The readership is higher at a library, so
a journal's publisher would lose money; thus they offset that loss a bit.
Hence, the ARRL is losing money by charging libaries the same rate as
individuals. I think that's awfully kind of the ARRL to absorb the loss.
They'll also provide a library discount for the purchase of the complete
collection of ARRL books.

Those that feel the need to critize the ARRL need to read of the history
of ham radio and how the ARRL has fought for its survival the last 80
years.

The ARRL has never placed a muzzle on its members - I recall reading *many*
critical letters from disgruntled QST readers over the decades.

I haven't heard about this issue in Guyana. This is true, apparently, in Guatamala (see story at www.hamradio-online.com, via Spacenews). The concern is that this encompasses the amateur satellite uplink passbands between 430-440 MHz and commercial mobile ops on these freqs in South America would cause potentially severe interference to the satellite covering a footprint from North America to South America. This problem has occurred already in Lebanon where I'm told landmobile users jam OSCAR satellites in parts of Europe.

Folks, this an old proposal. It didn't just come up now. PFF put this out a year or two ago. PFF is a "think tank" that does policy analysis from its point of view (which is generally "pro-business" under the guise of being libertarian, which it isn't). There are lots of policy analysts and viewpoints out in the world. Don't get stressed out on this one just yet. There's plenty of other stuff to get stressed on right now without wasting emotional energy on this. Wait and see if this bubbles back.

The toroid deal is a fact.. However, if you ARE going to disconnect, get that free end grounded! Otherwise, you may have the distinct honor of one who has seen ball lightning inside your shack! Heck you can have it happen even if it is grounded, just makes the possibility of a plasma induced fire a little less likely...

Nobody is trying to force your '65 Mustang off the road. You are welcome to drive it all you want on the modern highways. But wouldn't it be absurd if the government mandated that we successfully pass a driving test in a '65 Mustang before being allowed to drive a Camry, Accord, or other modern automobile?

I think you get the point.

Too bad you can't capture it. A small ball lightning has about 25 kWh of energy.

On the other hand, this is probably not something to play games with...

: > An excellent argument. Why should I be forced to learn about RTTY
: > for FM voice privs? Why force me to learn about HF packet when all
: > I want to do is yack on HF SSB? The list is endless.

: Hi Michael, the key word above is "about". No one would object to
: having to learn about Morse code. When one learns about RTTY, one
: is not subjected to threat of force from the feds to be able to
: decode it "by ear".

Cecil, you are "picking nits" again.

Why should a person have to learn electronic theory, when all they want to do is buy a rig and start yacking? A more appropriate course would be in learning how to read and understand a user's manual.

Why should a person have to learn about SSB, RTTY, FM etc, when all he wants to do is operate CW?

Why should a person have to take an advanced theory test, just so they can operate at the maximum legal power? Why is a Novice only allowed voice privileges on 10 meters (the band where they are most likely to cause TVI)?

Why any sort of testing at all? If a person wants to experiment with new modes, theory testing is not going to prove his/her capability of doing so.

In other words, your argument is silly.

You are not being "discriminated against". People are responding to your post just like they would for anyone who made such a stupid piece of junk mail.

What is "illegal" or "liable" about their responses? Are they any more illegal than your "Guam" references, or your calling people "dickheads"?

>"PUERTO RICO HAS EVERY RIGHT THAT EVERY OTHER STATE HAS. SO THATS WHY MOST
>PEOPLE CONSIDER IT A STATE.

I doubt if even a majority of the people in Puerto Rico consider PR to be a state. Last survey that I heard about, the population did NOT want the island to be granted statehood.

As far as people in the 50 states go - it is unfortunate, but a good share don't even know Puerto Rico exists, much less where it is and that it is a US protectorate.

All you get is the overview. The mail address does not work any longer. Far as my Washington collegues can tell PFF disappeared some time ago. The plan as stated is 2 years old and was the work of some conservative think tankers. The FCC implemented much of the plan over the past months.

Newt's Atlanta office tells me not to worry...the FCC is not in danger! ARRL's Regulatory desk echos the same.

mac has fallen prey to the same thing that hit TWA Flight 800...OLD News, Bad news, NO news!

: This actually *is* a war ... it's been shaping up for a LONG time ...
: I've been licensed for over 20 years and I've argued that whole time for
: the elimination of the CW *test* requirement ... I am not alone,
: there are many, many of us no-code *test* advocates ... and I've said
: the entire time that "I'll defend to the death *your* right to pound
: brass if you'lll defend my right to choose not to ..."

But, apparently still in the minority. A sizeable majority of ARRL members are in favor of continuing the code requirements - even though the ARRL board itself appears to be in favor of getting rid of the requirement.

Even when the non-ARRL hams are factored in, it is still about 55%-40% in favor of the code requirement. The other 5% are undecided, or don't care to express an opinion.

Just because you have to pass the CW requirement, does not mean that you have to use it.

: Anyway, any compromise that satisfies the rabid pro-coders will not go
: far enough in modernizing the ARS to bring in the technical folks we so
: desperately need to develop new, more spectrally efficient technologies,
: will not bring in enough of the "new blood" we need to help grow our
: numbers for political clout, will not modernize the rules and eliminate
: the unnecesssary barriers to new technologies, and will not assure our
: future survival in the face of ever-increasing pressures on spectrum
: resources by the rapidly growing demand for a wide variety of commercial
: communications services and systems ... so SCREW the pro-coders!!! ...
: nobody is telling them they can't beep ... but they've had their way
: far too long and ham radio has suffered greatly from it ... ham radio's
: very future survival is in danger and we HAVE to make the necessary
: changes NOW *before* it's too late ...

That is a silly argument. The new technologies can be developed above 30 MHz. As such, you already have a no-code license. No more is needed for research into new technologies/techniques.

I haven't seen a flood of new blood doing research. All I have seen is a bunch of no-code Hams who use 2 meters like the CB band.

3023. FREE Military Family Message Service For The Holidays!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-09 00:00:00 UTC
From: nacec@nacec.org
Message-ID: <58fvj3$pim@darla.visi.com>
Source record: 210732

To: All U.S. & Canadian - Active Duty Military & Their Families.

NACEC hopes to brighten the Holiday Season for as many military families as possible this year.

We are doing our best to get the word out about our free "Digi-Gram" worldwide military family message service, that can be access on the Internet.

If you or anyone you know is a military family member, please pass this information along so that they may have the opportunity to access and use this service to keep their families closer during this Holiday Season.

The URL to our web site is: http://www.nacec.org

Once at our main page just proceed to the Military Family Support Area where you can access the message service and message forms.

HAPPY HOLIDAY from all of us at NACEC.

Edward Addy, Executive Director
NACEC Center
Minneapolis, MN

: Umm...Dave, I think you'd better lay off the espresso for a bit. I don't
: think that an action in a small South American country is going to
: result in a drastic, sweeping ban on your U.S. operating privileges.
: Remember, there are quite a few countries where you essentially CANNOT
: use a radio AT ALL.

The problem is not the ban in Guyana. The problem is that the band will be reassigned to commercial users. Guess what that will do to the dozen or so Amateur Satellites, that use 70 cm as the uplink band. Can you imagine that it just might make the satellites unusable in Zone 2?

>but it is obvious that you are not invited or desired.

Actually, your analogy is not exactly correct. It's more like if you
were to hog the shelter for your family every day of the year.

And if, by chance, someone came by to use the shelter while you
were away, you come over and physically remove them without
saying a word. The only way someone outside your family gets to
use the shelter is if you're out of town and don't notice. *That's*
the proper analogy.

Ham Radio Online is now in its second year of continuous publication on the Internet. With readers in 53 countries around the world, Ham Radio Online is one of the world's most popular amateur radio web sites. Visit us at http://www.hamradio-online.com

We have feature stories added all the time, real-time radio propagation and aurora information, equipment specifications online, a huge library of past articles, current disaster situation reports, commercial products directory and one of the largest directories of Amateur Radio web sites on the net, plus an opinion section and a bulletin board where you can post your own messages.

Right now, wee have stories running on DXpeditions, African shortwave broadcasters planning to switch to digital satellites, Guatamala auctioning off the 70cm ham band to commercial users, news on AMSAT Phase 3D and AO-13's recent death, Global satellite navigation technology and so much more. We've got 20 new stories in the queue right now. Watch for them over the coming month or two.

In spite of our professional appearance, we run Ham Radio Online as a hobby. So please stop by and enjoy. If you have a story or announcement you would like to add, please pay us a visit and drop us some email to vbook@vbook.com.

Thanks and 73,

Hello

Im trying to get my hamcom converter to operate proparly. I have a
Kenwood TS9130 transiver and a 686 pentium computer.
im trying to get my converter to work with the morse function
but my transiver is very high impendance on the cw key input
and when i put in the plug in the transmitter it directly starts to
send.
I have try to couple the collector of the transistor to a 10kohm
resistor and to my radio power but without results

pse need ideas or help

Why shouldn't an organization cater to the median and higher technical
ranking members. Why shouldn't an organization support those members
that support it! The League and I have had many disagreements in the
41+ years I have belonged but agree or disagree, the only way I have
an input is to belong and fight for my position.

>its time to delete the Morse code as a testing requirement for getting ham
>radio voice operating privileges on bands below 30 MHZ".

Let's see.....you will only support an organization wherein the
membership agrees with your position. If what you state above is
correct it would seem to me to be an easy task for you and your fellow
no-coders to take control of the ARRL.

Many no-code types upgrade and do so in order that they may utilize
the enhanced features that upgrading allows.

You refuse to admit that many hams use code regularly and while I agree that code is not the ONLY way of testing a future ham's abilities relating to radio knowledge, it is one way that is proven to have worked successfully for 50+ years.

Great idea. And then what will you do? The FCC refuses to do anything. What can you do, Superman? A personal plea in the form of a letter to Reed Hundt, FCC chairman, ended nothing. There have been FCC listening posts monitoring the situation - I promised not to say much more about that, but they listen regularly for ENTERTAINMENT. it is incredible, but folks, calm down, ignore it, be thankful it's mostly in one place, and leave it alone. If you want to preach to the folks there, start with Rich Whitten and then get a job as a foreign missionary. You will be doing the ham community a much better service. And we might even take up a collection to buy you a radio! I hear the weather in Togo is great...

****

Oh so true, and there are a lot of lawyers out there waiting for a chance to collect some money from someone for some stupid cause. Boys

and girls, just leave it alone. If you have a problem with it, join the group (if you can) and help us outnumber the nitnoids. It is the only defense we have left. Steve's got (mostly) the right idea.

Lastly (and I really hope that this is the end of the thread, folks) let us all remember that this is a SERVICE first, and a hobby second. If you don't agree with this, have a nice day UPBAND. I hear there is a glut of 11 meter radios out there waiting for holiday wrapping.

****
Cheers and holiday cheer to you and yours, Todd N2XL

don't forget the ICOM W32A HT. I own one and it's GREAT.
Great sensitivity, easy keyboard mods, etc. About 399.00 at Ham radio
outlet. It's the newest one, replaces the W31A HT. 73's Stan KC2ADC

>But, apparently still in the minority. A sizeable majority of ARRL members
>are in favor of continuing the code requirements - even though the ARRL
>board itself appears to be in favor of getting rid of the requirement.

I predict that the ARRL will eventually support the elimination of CW
testing for HF access for the '99 conference.

In the mid-80's, a similar poll was taken of ARRL members, and an
overwhelming majority of ARRL members supported retention of the CW
licensing requirement for all ham bands. Nonetheless, the ARRL
supported the VHF codeless license (albeit in a different form than
it is today) despite the wishes of the membership.

The people running the ARRL are not stupid. They know where the
gravy train is. They don't want to have to go out in the real world
and get a real job (hi Ed!) after having that nice comfy job in
Newington. If that means they can increase sales of study materials
and other book sales (how many pages in the latest issue of QST?)
than they will support it.

Remember the addage: "Follow the money".

>I haven't seen a flood of new blood doing research. All I have seen is a
>bunch of no-code Hams who use 2 meters like the CB band.

Yup. And soon they'll all be on HF calling for elimination of those
"hard" theory examinations that restrict their access to certain power
limits and segments of the bands.

Hi Don, I question your ability to communicate with a battery and a wire. The RF generated by shorting the battery out cannot be heard very far away and the battery will not last long. Assuming the EMP knocked out all the transistors, who is going to hear you? Someone with a crystal set? Your statement makes me tend to believe the last 3 characters of your call. :-)

Hello !

I just bought a CW-N filter for my Icom IC-725.
The problem is that the filter recomended is the FL-101 and the
one I got is the FL-63 (used on the 735).
They both are for the same IF and have the same caracteristics
(250Hz/-6dB).
The socket to put the filter is different so the FL-63 doesn't fit
in the FL-101 place, anyway I have already made an adpator so the
big question is WILL THE FL-63 WORK AS THE FL-101 ?????

Thanks !

I have some problems with my TS-930, the antenna tuner doesn't work properly. After 2 tunings he doesn't want to tune anymore, it's just like the tuner is not reseted after a few tunings.

And when I push the PTT, the led AT-tune isn't lighted anymore, so he even don't check the SWR anymore..

Did anyone had the same problem, of if you could give me some advice please mail me.

From: "Roger D. Placer" <rogerp@lucent.com>
Message-ID: <32AC29A2.F12@lucent.com>
Source record: 210753

Hi all,

I've been a ham for 15 years but I've never owned an HF amplifier! I will be getting one shortly (Ameritron AL-811, 600W), and I have a question about my revised antenna tuner needs with the amp in line.

I currently use an external MFJ-949D tuner with my Kenwood TS450S. I have been accustomed to outboard tuners for a long time. Here's my specific question:

What are the relative merits of: A) a 3kw external tuner, such as the MFJ top-of-the-line model; or B) installing the optional auto-tuner in my TS450S. My confusion stems from a so-so understanding of the load matching situation introduced by an amplifier. The two choices above represent two different chains:

A) Rig --> Amp --> Tuner --> Feedline
B) Rig --> Tuner --> Amp --> Feedline

Please offer any thoughts on this matter - I appreciate them all.

Hi Bill, because until the rigs are all type-accepted, learning electronic theory is relevant to amateur radio. CW skill is no longer relevant. It is a very old artifact that needs to be removed from the testing requirement.

> Why should a person have to learn about SSB, RTTY, FM etc, when all he wants
> to do is operate CW?

Knowledge of modes is relevant to present-day amateur radio. Knowledge of the CW mode is relevant. CW skill is not.

> Why should a person have to take an advanced theory test, just so they can
> operate at the maximum legal power?

Knowledge of high-power RF safety is relevant to amateur radio. CW skill is not.

> Why is a Novice only allowed voice privileges on 10 meters?

Because the guys making the rules are not novices? I'll bet an advanced class ham had a hand in the SSB rules for 40m (his favorite band?). Why no extra privileges on 40m voice?

> Why any sort of testing at all?

Because some things are relevant to present-day amateur radio. CW skill is not one of them.

> In other words, your argument is silly. Bill

More than 100,000 (and growing) hams would disagree with you.

> "broadcast" may start.
>

Don't forget that a lot of users of the repeater, and especially
those using handhelds, may not hear the weaker simplex stations
who are operating on the output frequency. This is why repeaters
are coordinated to use a particular frequency pair, and the
users of the repeater should not have to worry about somebody
using the output frequency when they make a call. The users of
the output frequency of a repeater have to accept the fact
that the repeater is coordinated to use the frequency, and they
are not. According to the rules, the uncoordinated station has
the primary responsibility of correcting an interference
problem, so it is the users on the repeater output who should
have sense enough to move.

> >If you claim a repeater has special privileges different from ordinary

> to eradicate swine from my machine.
>

Some people just like to force the issue that they are legally allowed to do this and that, but if they were really up on all the rules, they would realize that they are wrong. Repeater owners and operators are usually even more familiar with all of the rules than the average joe. Instead of arguing about this, just read the rules regarding repeaters and repeater coordination. Like it or not, if push came to shove the person who is squatting on the frequency of a coordinated repeater will lose.

I'll close by saying that repeater owners have a lot of money and time tied up in their systems. Everybody wants to use repeaters, but when the time comes to ask for help in paying the phone bill, or fix a problem, everybody seems to be busy, broke, or sick. Under these circumstances I don't blame anybody for wanting to close a repeater, although I still leave mine open to the public. Anybody who disagrees with closed repeaters should put one up, operate it, maintain it, pay for it and leave it open to the public. You will not understand what it is like until you have done it yourself.

The most annoying thing is to listen to conversations that complain about the repeater. I'll give you an example. Last year there was a spurious commercial transmitter in the 453 Mhz portion of the band. This transmitter was tearing up my 440 Mhz machine for a few months. I had to listen to and put up with complaints from both members and non-members. The most annoying thing was to hear a non-member saying, "When are THEY going to fix the repeater?". Who is THEY? The "THEY" in this case is myself and one friend who always goes overboard, but in this case it was a problem that could not be fixed at our end. I finally asked that everybody try to identify the offending transmitter so we can contact them to correct the problem. "Oh I'm too busy", " The batteries in my scanner are dead", "It's probably the repeater receiver", "Why can't you buy a better duplexer", "I think your preamp is bad", "Just add a pass cavity to get rid of the intermod" "This is why I pay my dues, why should I have to help?", and "Blah blah blah!", and on and on and on. Everybody wants to give you free advice, but nobody wants to help you when there is a problem or the repeater is down! This is why owners close repeaters!

> Based on what Jim? You've failed to state a cause in the preceding
> paragraph
> for keeping the theory.

The legitimate concern of any regulating administration, (or at least in the US and Canada) is the mitigation of interference among the users of the radio frequency spectrum. Morse code isn't doing that, nor can it be modified to do so, because such testing is merely confirmation of wetware conditioning. Thus the only way means by which the regulating authorities have to ensure its legitimate concerns is by means of the theory test (a true operation test with practical demonstration of equipment maintainence and repair as well as a station inspection would be ideal, but that was abandoned, at least in Canada some 70 yeats ago). None the less, in considering the relative lack of problems from the amatuer service to the other services, it would be folly to abandon this programme in an attempt to draw a similar programme which is irrelevant to determining the individual's competency to operate an amateur station. Moreover, considering that most of the sanctions that have been undertaken by FCC against those who operate in the amateur service would give creedance to the notion that Morse code indeed would tend to have a retrogressive effect upon an individual's behaviour.

> By the way Jim, I'm playing Devil's Advocate
> with you on
> this one only to make a point with regard to the elimination of CW.
>

Although there is some discussion that if Morse code testing can be abolished, so to can the testing on theory. Regretably, those who do so seemingly fail to understand the objectives of testing, in so far as the amateur service is concerned. If Christensen wishes to take the Devil's Advocate role, that is all fine and good and he is welcome to do so, but he, and those who also take such a position fail to understand that such abolition would also mean type approval of equipment, with no possiblities of

using homebrew at all, even with passive devices such as tuners and antennae. More to the point, I would submit that if theory testing were to be deleted, then amateur station installation would be subject to prior approval prior to being authorized to operate. Such approvals would be required because amateurs no longer have the knowledge to mitigate interference, and would probably be subject to more stringent controls and restrictions due to potential effects of exposure to non-ionizing radiation.

In summation, Christensen's assumed role of Devil's Advocacy is short sighted, because it discusses neither the consequences of such abolition, nor the acceptability of such consequences (if however amateurs would agree to the resulting restrictions, they are entitiled to do so and I wish them every success).

>
> No Jim, your deduction is incorrect. Why does one need theory in order
> to
> understand where his band edges are?

Correct me if I am wrong, but isn't band edges a regulatory concern? Under those circumstances, I fail to understand how Ohm's Law is relative to a regulation that states that amateurs may operate in the band from 3.5 to 4.0 MHz.

With respect to my so-called deduction, does Christensen have any legislative or regulatory evidence to would indicate that the FCC does not have a concern with interference? If a theory examination is unnacceptable, with what would he replace it with in order to ensure that amateurs are competent to operate their stations.

> If a station causes interference,
> it's not likely to be detected and solved by passage of today's amateur
> theory.

But I can assure Christensen that if his neighbour next door hears him on his stereo, Christensen will likely to be informed of the problem. Under those circumstances, does Christensen believe that he would not have a role to play to mitigate such interference? Without a modicum of theory, he would be no better than a CBer in suggesting a cure for the problem.

> Perhaps you have a much different written exam in "The Great
> White North?"
>

Yes, as a matter of fact it is quite different in the True North Strong and Free (more commonly known as Canada). If one wishes to avoid the "heavy duty" theory necessary for the homebrewing of transmitters, one may write the Basic examination and be allowed to operate a modern commercially available transmitter. The objective of this examination, in so far as the theory is concerned, is to ensure that the individual has an appreciation for other users in the amateur bands. In so far as the theory is concerned, it concentrates on the means of avoiding problems, such as proper station grounding techniques, and measures to be taken if there are problems (the majority problems being inductive interference). If, however, one wishes to operate a home brew transmitter (as well as indulge in other priviledges) then one sits for a theory-only examination, properly called the Advanced qualification.

> > Indeed, due to this lack of infringement characteristic, one must applaud the

> > to that testing, is unconscious.
>
> How naive Jim. The cold must be affecting the blood flow.

Actually, the cold is quite envigorating. I recommend it highly because it is obvious it also clarifies one's thinking.

The fact that amateur operational problems are relatively few for the headaches, it could hardly be argued that Morse code knowledge is germaine to this relative successfully programme. Since Morse code knowledge is ineffective, that would only leave the written examination as the means to avoid interference. Now, if the written examinations are eliminated, what would Christensen recommend?

> One doesn't
> need
> an understanding of theory in order to read and understand a frequency
> chart.

As I stated earlier, Christensen is confused in believing that reading a frequency chart is the domain of theory comprehension. None the less, it is even more naive to believe that simply reading a frequency chart is going to be sufficient to counter any of the problems that are most likely to be encountered by amateurs.

> Furthermore, all modern radios employ out-of-band transmit protection to
> other
> services in addition to very high accuracy frequency displays.

That most radioes can be easily modified to operate outside of the amateur bands (i.e. the "yellow wire mod" for the IC-706) would belie this notion.

I agree on the cw abbreviations on the repeater, but it doesn't bother
me.

I am probably not on agreement with the Nothing heard, xxxxx clear. I
read the rules as stating you must id at the end of your conversation
or every 10 minutes, I'm not sure calling for someone constitutes an id
at the end of your session if you call, don't hear, and turn off the
radio, is that following the rules, I'm not sure, so I error on the
redundant side.

BTW just because you don't hear them come back, does not mean I can't,
more than once I have called and talked to someone who was actually
running simplex on a repeater output or in reverse and didn't realize

it, I usually mention it to them because they have been doing some testing and haven't set the radio back to normal offset.

We have one ham on the local repeater who when someone says xxxx for ID replies xxxxx for ID any other purpose, either implied or stated is not to be construed as a binding agreement, this id is for legal requirements only and is not to be used otherwise. It usually does the trick.

> use in amateur radio.

A case-book example for an MBA couse in stategic marketing I suspect.
Could it be that AEA hung its hat on the aged PK-232 product line for
too long? Quite honesly, there hasn't been a single product of their
that I have ever considered purchasing. All their multimode TNC are
far too large for my desktop. I've never been able to get past that
barrier.

Since this subject has surfaced on this and other threads, yours is
the first to possibly place the fault squarely in the lap of AEA.
Could it be that rather than economic conditions in the amateur
market, AEA has failed to meet and exceed customer expectations?

In the aftermath of AEA, consider a company like MFJ with its mediocre
reputation for quality and service. Quality nothwithstanding, they have
a wide product line, good value and even some unique products that I
would like to own.

PacComm is a good example of a company that is known for
innovation and high quality. Are they in financial
dire straits because of the so-called "declining amateur market?"
Thank God they've had the foresight to start working on a product
that addresses the high demand for network speed. I'll be the first
in line to make a purchase.

Rick,
The first step after the letter gets to Pittsburgh is that Mellon Bank takes the money, and cnacels your check. If you have your 'check number', the great ladies at the FCC 1-800-322-1117 option 2, option 4, can look up the app by that number. If they can't find it, I'd resubmit one via the 'online' method and after you get the printout that shoots out, send a check within 48 hours. That's how I got mine. I'd also put a brick on that original check, if Mellon hasn't cashed it. They seem to have the same computing system as the Anesthesiologists have. You know, the one that has their bill in your mail box before you wake up!

Good Luck
Jim

>
> 73 de Jim - KF6CR

No doubt. A couple of points:

1. I respectfully disagree re: the ARRL having to abide by the results of its poll. If the response rate was low, and it was not valid and random, it has no validity (as defined by the science of statistics: validity = whether a poll measures what it purports to measure) and should not be the basis for decision making. A six pack of beer says that they mailed the things to QST subscribers and a bunch of old timers are the ones who responded. For that matter, I'm an ARRL member (and a certified old timer: licensed in 1967) ... I didn't get polled!

2. No argument about keeping incentive licensing going. It is quite logical that the cw portions of the band should be retained as cw-only, and that only hams who have passed a cw test should operate there (although we should continue to have a novice bands in order to let newcomers work on their proficiency). Maybe we let current generals and above, who have passed 13WPM or greater, have unlimited CW privileges? I dunno. I'm an Extra, so don't accuse me of being self-serving. :-)

> "non-issue."
>

Christensen has presented an interesting premise - that since the amateur service is but a minor annoyance, in so far as interference is concerned, the written tests are not required. Perhaps... but the problem is that we are unable to test the hypothesis because indeed there are no amateurs who are authorized to operate in the manner prescribed by our two administrations without having undertaken written examinations. At best, Christensen's bottom line is merely speculation.

>
> The consequences have been addressed. The material reality Jim is that the amateur
> environment would not change a scintila, with or without testing.

I disagree. For every give away, there is a take away. If there were to be no testing (for example the installation of radio equipment on board a voluntarily fitted vessels), amateurs would be faced with the use of type-approved equipment and operational conditions to their licenses. If an amateur is not able to demonstrate some technical competence, then that technical freedom will be concurrently contained.

>

If that is Christensen's proposal, then he is free to do so, but I would not support this endeavour because it would be unworkable, if indeed enforceable.

>
> It's a concern, not a material problem.
>

What exactly does Christensen mean by a material problem? I am not familiar
with this term in the amateur certification and operational sense.

> indirect application of amateur equipment is quite rare. Advances in technology
> (inter alia, stable, high resolution oscillators), can be credited with this fact.

Perhaps this is true, but considering that such technology is available to
these other services, as well as the amateur service, would tend to discount
this hypothesis. Amateurs may very well be more demanding in the performance
of their equipment and many of the amateur equipment manufacturers are
complying (too slowly in my view, but that is another issue), but that has
had an effect upon the non-amateur market as well (and in some cases, I would
think, there has been a reverse osmosis.) In contradiction to Christensen's
assertion, I do not agree with his view that the relative lack of
interference from the amateur service is due to supposed superiority of the
equipment. More to the point, that amateur's have to submit to a written
examination would tend to make those individuals more aware of their
responsibilities.

>Your
> premise is based on a false assumption that "If I pass a theory exam, I will not
> interfere."

Would Christensen be kind enough to show me anywhere in my postings that I
have made such a presumption?

>I hold that based on today's examinations, interference will be generated
> with or without testing.

I couldn't agree more.

>A knowledge of the allowable spectrum is essential.

Although it is a non-sequitur to the previous statement, I couldn't agree
more either.

> avoidance, would you be in acceptance?
>

I am pleased that Christensen has seen the light, in that that is exactly my thesis. Incidently, this the test that Morse code testing fails because confirming one's wetware conditioning of Morse code learning is irrelevant to the government's legitimate interest in mitigating interference among its users. (I prefer Pavlovian conditioning, but some object to that apellation, so I shall be magnanamous by refraining from using that term.) Since the only legitimate interest of the government is the mitigation of interference, $64K question is as follows:

To what extent should the amateur understanding of theory be?

This question goes to the heart of the matter. Some have advocated that they would support tougher theory examinations if Morse code were to be dropped. Regretably, a quid pro quo is just as ill-advised as retention of Morse code testing. It is ill advised because unless it relates to the government's interests, then that is fulfilling the needs of the amateur community. Those needs, whether we like it or not, are not considered in the enabling legislation. In fact, if as Christensen says that interference from the amateur service to other users of the radio spectrum is insignificant, one could surmise with greater certainty that it is the written examinations which sensitizes amateurs to its reponsibilities, as opposed to the equipment. For that matter, the call for greater emphasis of theory examination is equally illegitimate if such theory is irrelevant to the government's mandate.

>
> Perhaps you're confused Jim. It's been your *only* contention and justification for the
> written exam. I don't believe you've previously mentioned one iota concerning the
> benefits of learning theory other than for interference avoidance.

Oh, there may very well be other benefits to learning theory other than with respect to an individual's responsibilities to other users of the radio frequency spectrum. Who could possibly object to that? But, those benefits are irrelevant to the government's concern.

> Because to learn any
> more then *absolutely necessary* to avoid interference starts to smell of hypocracy. In
> fact, it parallels the same reasoning for continued Morse testing.

Firstly, what is meant by "learn(ing) any more then (sic) is absolutely necessary"? Even in its most minimalist requirements, Morse code testing fails this litmus test. On the other hand, I can quite well understand that there will be a debate on what is it that an amateur must know in order to be

competent to operate an amateur station. But so long as that debate
does no keep its eye on the prize, i.e. the government's legitimate interest
in the mitigation of interference, the conclusions of that debate will be
worthless.

Special Event Announcement

The TriCity Amateur Radio Club will operate as N0EL on 14DEC96 in
celebration of the Christmas season. Operations will take place from
Christmas, Arizona, 1500-2100Z, on 7.225 and 14.240.

PLEASE QSL, with SASE, to KI7MN (good in callbook) - please DO NOT use
the
N0EL address as it is not current.

Special bonus for the QRP afficionados - QRP CW operations will take
place
from 0100-0300Z, 14DEC, on 7.040 and 7.110 +/-.

73 de N0EL and the TriCity ARC

Again, it would be refreshing if Wallingford took the time to read my
postings. Equally refreshing is that he would refrain from putting words in
my mouth. Aside that hope springs eternal, I dislike having to refute
arguments based on what others thought I said. I would be pleased if
Wallingford would ask for clarification prior to pontification.

I agree with Wallingford, CW testing does not prove anything about the merits of the individual to opeate an amateur station. However, his premise with respect to theory is merely conjecture on his part. Indeed, one can stay within the permitted amateur allocation and still cause interference (swamping is the most common example). In other words, you can be operating with the parameters of the regulations, and still screw up. Yet, without the requisite background in theory to assess and mitigate the problem, the individual is no more better than a high powered CBer. I agree with Wallingford's contention amateur's exhibit heightened awareness of good amateur practise, but, unlike all the other non-amateurs, amateurs are the only ones who are allowed to experiment and use non-type approved apparatus. In as much as I agree with Wallingford's view that those three steps go towards good amateur practise, it is not enough. Since the regulatory agency is tasked to mitigate interference amongst its users, amateurs are faced with submitting to an examination on theory subjects. Thusly, things are not all equal. Amateurs have privileges that are peculiar in comparison to other services. Rather, if all things are indeed equal, and theory testing were to be dropped, the regulating agencies would be forced to withdraw those priviledges that were premised on amateurs having the competency in the theory of radio.

73 and live better digitally
Jim, VE3XJ

Wallingford is correct on one point, however. If content of the examination, be it theory, CW or throwing horseshoes, is irrelevant to the pursuit of the government's legitimate interest of mitigating interference, then that examination is illegitimate.

: I agree with you 100%. I am currently in the Army and we had a problem
: with them using spread spectrum on the 430-440mhz band. We approached
: them with the problem and found out there was nothing we could do
: about it seeing that that part of the band is primarly for military
: and we are secondary users of it. Still it did not stop us. We got the
: local law enforcement to step in as it was also interfearing with
: their communications. Once that happened they turned down their power
: and we haven't seen them since. We also had a problem with one of our
: repeaters in that it had a spur that was getting into the military
: repeater that was co-located on the same hilltop. One of the club
: members that works with the army said don't be suprised if you hear a
: military person on their saying that we are interfearing. For one if
: that person is not a licensed ham then he or she should not be on the
: ham bands and they are violating federal law by doing so. I think that
: this is the same case and the Andrews operator should be fined to the
: max to show them that the ham bands are not a place to be. The
: military has tons of spectrum so I don't think they should have been
: there in the first place. In time of war that is understandable but
: not in peace time.

: 73

In the old days it would have been a pleasure to speak to someone on a military radio. I seem to remember a few years ago a test going on over the west coast. Several C-130's where on the air (HF) everyday about the same time. Worked a few of them myself.

Yes, the military can be stupid. I should know, I am currently active duty Air Force. The fact still remains that if it was not for the military and even military stupid. There would be no ham bands to talk on.

I also own a repeater on the 440 MHz band. You want to talk about arrogant, who told the hams in the first place they where primary service on the 440 band? Ham radio is a secondary service offered to us in a partnership. In the beginging the military said, we will operate radar on the band. Hams are welcome to use this band, however, they work around us. So what is the problem. Just work around them.

The example of the "spur". Well sir, spurs are NOT legal. Your spurs better be 40 db down or you deserve to have your operating privilage revoked. Just fix it. Circulators prevent spurs from getting carried away and in California they are required in many cases.

I would strongly agree with you Stan when you talked about writting letters. That is how things get done. It is very important that people these days learn and use communications of all forms. If military personel got carried away and offended anyone, that should be reported. If we break the law that should be reported. With the type of people that are entering military service these days, I would be willing to bet that person really did not know what they where doing.

Now that this thread has heated up, I will be looking forward to reading everyones thoughts.

In the U.S. there are other radio services where that is actaully the case. Take the aviation and marine services as examples. Pilots and boaters that use HF or communicate with foreign stations must have a operator license or permit.

The restricted permit allows the operator to use specific types of HF radios and they are not allowed to make any internal adjustments or repairs to the equipment. It is essentially an "appliance operator license". There is no code test. There is no test at all since the operator is not allowed to do anything other than operate.

A general radiotelephone operator *license* holder can make internal adjustments and repairs to, and operate an aviation or marine radiotelephone station. There is a written exam for the GROL since the license authorizes the holder to do things to the station.

Some might find it interesting that, in the aviation and marine services, restricted operator permits and the GROL do not authorize the use of telegrahy. A GROL holder can not operate or service an aviation or marine radioTELEGRAPH station.

If written testing of rules and regs for an amateur license applicant was dropped then the privleges should be changed. A "no-theory" amateur operator should not be able to use anything other than type accepted equipment and be prohibited from building, repairing, modifying, or internally adjusting any station. THAT sounds like a kind of CB license to me. (To my knowledge, CBers were never required to have an operator license. And telegraphy is prohibited on CB.)

The analogy between dropping (or in some way changing) the code requirement and dropping written testing is a poor one. The resulting qualifications of operators would be much different if "theory" was dropped.

Roger J. Buffington, W6VZV (rogerjb@ibm.net) wrote:

: No doubt. A couple of points:

: 1. I respectfully disagree re: the ARRL having to abide by the
: results of its poll. If the response rate was low, and it was not valid
: and random, it has no validity (as defined by the science of statistics:
: validity = whether a poll measures what it purports to measure) and
: should not be the basis for decision making. A six pack of beer says
: that they mailed the things to QST subscribers and a bunch of old
: timers are the ones who responded. For that matter, I'm an ARRL member
: (and a certified old timer: licensed in 1967) ... I didn't get polled!

OK, I'll agree with your point on statistical validity. If the poll is statistically valid, then ARRL would certainly invite criticism by not following the results.

Not sure how you got missed. I have one year on you as on OT (1966) but my wife also received a survey, and she's been licensed only about one year. Wasn't there one in QST that you could send in?

Sure, some of us (apparently a lot) feel that we have a lot to lose if the code requirement is dropped. Since I mainly operate CW except for some contests, I wouldn't feel the crowding. The problem is, giving someone a vote doesn't mean that he will vote rationally versus emotionally. If you don't believe that, spend some time on news.groups.

: 2. No argument about keeping incentive licensing going. It is quite
: logical that the cw portions of the band should be retained as
: cw-only, and that only hams who have passed a cw test should operate there
: (although we should continue to have a novice bands in order to let
: newcomers work on their proficiency). Maybe we let current generals and
: above, who have passed 13WPM or greater, have unlimited CW privileges?
: I dunno. I'm an Extra, so don't accuse me of being self-serving.
: :-)

Didn't plan to accuse you of anything.

I won't complain either way, because I just need to pass my 20-wpm now for Extra.

> >>Michael McGinnis <Paddy@Montana.COM> wrote:
> >>>Can anyone tell me how to make a simple dummy load that can take a load
> >>>of about 100 watts HF?

You can build a good 50 ohm dummy load with a bunch of 2 watt carbon composition (not wirewound) resistors.

Start with a quantity 48 2400 ohm 2 watt resistors. You need to scrounge these at a surplu store to make it cost effective. Cut the leads to about 25" long.

Get two pieces of fiberglass copper clad board and drill holes through both boards at the same time in a pattern to accomodate all of the 2 watt resistors. 8 rows of 6 each should work. Space the holes about .5" apart to allow room for airflow. Solder each of the resistors into one board. Then put the second board on the other side of the resistors. Solder these. Now all of the resistors are in parallel. Solder the braid of a short piece of coax to one board and the shield to the other board. Attach to a PL-259 and put it in a box with ventilation holes.

This load should be good through the HF bands and maybe all the way to 2 meters and run at 100 watts for about 10 minutes which means it's equivalent to a commercially available dry dummy load with a 1.5KW rating. The commercial loads are typically only good at their rating for 10 seconds.

If this sounds like a lot of work, Ham Radio Outlet in Sunnyvale had a demo Tucker 1.5KW load for $39.

Good Luck

Steve KT4FY

Curtis Wheeler (cwheeler@ricochet.net) wrote:

: But first - I don't believe that theory tests are too easy. How hard
: do they need to be? They cover relevant material in consideration of
: the privleges the license class allows. If the code testing requirement
: is deleted I don't there is a automatic need to change the difficulty if
: another test to take it's place.

My comment on easy tests: the so-called "distractors" are not at all distracting. Two of the four possible responses are usually ridiculous, if one even bothered to skim the theory.

On the Extra exam, one question involved a circuit with resistance and inductive reactance. By simply knowing that inductive reactance causes a positive value for the j operator, and there was only one response with +j, it wasn't necessary to perform any calculations. In fact, I may have used my calculator twice in 40 questions. An ideal test would all four possible combinations of resistance and reactance, i.e.

400 + j500
400 - j500
500 + j400
500 - j400

If the exam doesn't verify that one knows the material, what good is it? I would have expected more difficulty at the highest level of written exam.

: I don't support going to the trouble of having international agreements
: changed to eliminate code requirements. I like the idea of having three
: license classes in the U.S.

: Class I = A written test that is equivalant to combining the current
: novice and tech written. No morse code test. No HF privleges. All
: privleges above 30 MHz.

: Class II = Class I prerequisite. A written test equivalant to the
: current general class written. 5 wpm code test. Current General HF
: privleges.

: Class III= Class II prerequisite. A written test that is equivalant to
: combining the current advanced and extra exams. No additional code
: test. All current extra privleges.

In a theoretical sense, I don't disagree. But, if 5 wpm is the best that one can do, then don't count on working too many others. Many of us OTs don't mind slowing down to help a Novice, but a General or above with a slow

fist is often shunned.

: This idea dumps the current novice license concept. Many people won't
: like that - but we can't please everyone on every issue. Some people
: won't like ANY of it.

: "Grandfathering":

: Current novices would be given a certain amount of time to upgrade to at
: least class I or II. (For EXAMPLE - one year from implemention) They
: would keep all current privleges until the grace period ended - then
: assume the privleges of their new class if they upgrade. This would
: mean that a novice going to class I would lose his HF privleges.

: Current techs assume class I. If it was determined to be in the best
: interest of the and ease administration we could forget the novice grace
: period and just bring them in as class I.

: Current tech-pluses and generals assume class II.

: Current advanced and extras would assume class III.

: It simplifies the license structure without having to recarve the US
: band privleges. Eliminate Novice. Band privleges for the class I
: remain the same as the current no-code tech. Class II assumes current
: general privleges. Class III assumes current extra privleges.

: The reason I like this system is that it reduces the number of classes.
: I don't understand why we need 6 classes of ham in the U.S. when 3 would
: do fine.

Yeah, when I got into the game, there were four classes: Novice, Technician,
General and Extra. Novice expired in one year. Others were renewable.
The Extra required two or more years as a General and was mostly honorary,
as it conveyed no extra privileges.

: It also keeps a code requirement - but it makes morse code stand on it's
: own merit. Let the amateurs create their own incentives for improving
: their code skills through contests, awards, etc. But it gets the
: "incentive" out of the regulations. But there is no need to have the
: ITU requirement changed to eliminate the minimum standard.

: Now. Before anyone starts flaming me, let's be clear: This is NOT a
: proposal for a no-code HF ticket. I have NEVER proposed eliminating the
: code requirement for HF. I just don't think that morse code should
: survive because it is forced on operators in order to upgrade. If morse
: code is worthy of life (I think it is) it should go on without artifical
: life support.

I like most of your proposal. Most importantly, we are getting some
sensible proposals put out there for scrutiny and improvement. So far, most
of the comments have been positive, another good sign.

>Dick Flanagan W6OLD CFII Minden, Nevada

The best analogy I can think of is having someone set up a board game in which they never had to make a single move, their opponent had to play every turn and if their opponent made any move that they deemed to be incorrect, they could declare themselves the winner.

In actuality, at this juncture, the ARRL has not "abided" by the results of the poll; they have simply conducted it. (I say "they" because is has little to do with the Technical Department). They are well aware of the limitations of any poll, self-selection, non responses, etc. The poll information will be forwared to the ARRL policy makers (the elected Board of Directors), who will consider it, direct input from hams and apply their own judgement as well, to come up with an ARRL policy and course of action.

I urge hams to make thier views on this, or any other topic, known to their Division Directors. The Directors can be reached by mail, email, telephone or in person at hamfests and club meetings. See QST or the ARRL WWW page for address information.)

I have a ICOM IC-706 and want to install it on board my 30' sailboat. Instead of installing a ground plate, can I run the chassis ground from the radio to the YANMAR diesel engine to provide the necessary safety of not being shocked? What are the pros & cons of such an arrangement. My Marine VHF radio is "grounded" through the + & - 12VDC. So it's confusing when I hear I need to have a separate ground plate. I currently have a no-code license, studying for my General license in preparation for cruising southern waters. All responses appreciated. Thanks in advance.

: to a "pay if you use" service, and reduce the membership fee. (Doubt
: it will ever happen though, someone has to pay K1ZZ's salary and
: business "trips" all over the place).

They've done that too, to an extent. Take the latest Sweepstakes contest.
By working a prescribed number of stations, one could qualify for an award
of either a pin or a coffee mug. Plan on paying $5/$10 respectively,
though, for these "awards." Plus, in order to get the *full* contest rules,
which used to be printed in QST, plan on buying a $5 book on ARRL contests.

It would be interesting to see what the cost would be, just to subscribe to
QST. Allow simply a magazine subscription, with everything else available
at a prescribed cost.

: >Obviously, if more no-coders were ARRL members, the results of the vote
: >might well be different.

: Maybe. But the number of no-code hams didn't significantly change the
: overall numbers either, when factoring in non-members, so your
: premise here is questionable.

You're saying that if ARRL had polled all no-coders, member or not, that
wouldn't have changed the results? Please, a few more details.

: >One of the arguments that is often heard on these newsgroups, is that the
: >code requirement is "keeping brilliant people who will enhance the state of
: >the art" out of ham radio. I haven't noticed this among our club's
: >no-coders, or those who get their license through our VE team.

: You're not alone. Most of the new hams that I have seen the codeless
: tech license bring in are merely CBers looking to "get away" from the
: garbage on CB radio. Of course, that's just this section of the country.
: In Silicon Valley I'm sure things are different.

Well, I'm quite a bit south of Silicon Valley. But we certainly have our
share of problems in SoCal. The .435 repeater. The mess on 70 cm with
private repeaters. And our share of CBers->no-coders.

: However, what it does show is that the codeless license doesn't
: appeal to engineers, it merely appeals to a cross-section of Americana
: that is interested in getting into amateur radio.

Good point.

: >How long do you suppose it would be, once no-code Generals
: >overwhelmed the voice subbands, that they would want the CW/digital subbands
: >for phone, "because CW is outdated?"

: I give it less than a year from the creation of a codeless HF license.

Probably.

Hi all fellow Hams and "i can improve the design" ers
I would like to know if much has been done to improve the pathetic sensitivity of this rig above 110Mhz (2m is ok). I had a look at the service manual and it appears that the so called "yellow wire" mod only results in the 2 m filter being connected in parallel with the other 60 to 200(ha ha) Mhz filter.
I have seen some work done by Gary Coffman and also modelled this filter using Puff and that gave me the same results as Gary's. The mods to this filter he suggests also models the same, but I'm not brave enough to start fiddling in the rig yet.

Actually, the poll asked questions with respect to the upcoming WRC-99.
Question 1. related directly to Morse code as it pertains to international
regulations. It gave the respondent two options: one to agree with the
assertion that code is no longer relevant, or soon won't be, in
international regulations. Or two, to agree that it is important for the
forseeable future to retain code testing in the international regulations.
Question 2 would actually be more enlightening about the details of the
respondents sentiments.

The posting you included was not written by the ARRL, but instead by
Bill Pasternak and his crew at Newsline. The text has the watermark of
Mr. Pasternak's personal vendetta against no-code techs. The ARRL has
to my knowlege not yet posted the results of their survey. The ARRL has
merely performed the necessary service of a poll in this case. That the
respondents appear to favor retaining code by some margin in the
international regulations is not the fault of the messenger delivering this
finding.

I find it amusing that some of the same folks who previously called
the survey a complete sham are now bragging about it's results.

Dropping theory testing may not be as far-fetched as you think. In 1984, the FCC dropped all license requirements for Private Land Mobile Radio Service, Private Operational Fixed Microwave Service, General Mobile Radio Service, and Radio Control Services. This meant that anyone can install, maintain and repair transmitting equipment in any of the private two-way radio services, with no license required at all. If the station license holder's equipment is found to be operating improperly, the station license holder is held responsible. The same process could be used with amateurs - if the equipment is operated improperly, fine and/or revoke the license of the station license holder.

Licenses were retained for Aviation and Maritime Radio Services because of the requirements of international law.

I opposed the changes in '84, but they have not turned out to be a bad thing, in spite of all the dire predictions by myself and others. Now I likewise oppose dropping the Morse code and theory tests. But if the dropping of either Morse or theory testing (or both) comes to pass, it may not turn out to be a bad thing for ham radio, either. One can only hope that will be the case.

ARLB088 McNamara to leave FCC

ZCZC AG68
QST de W1AW
ARRL Bulletin 88 ARLB088
From ARRL Headquarters
Newington CT December 10, 1996
To all radio amateurs

SB QST ARL ARLB088
ARLB088 McNamara to leave FCC

FCC Private Wireless Division Chief Robert McNamara, N1KHF, says he'll be leaving the FCC December 13 to take a position with Nextel Communications Inc, a major telecommunications service supplier. McNamara, 51, has been with the FCC for 21 years.

Deputy Private Wireless Division Chief David Horowitz will become acting chief of the Private Wireless Division upon McNamara's departure.

The Private Wireless Division is the part of the Wireless Telecommunications Bureau that regulates Amateur Radio as well as matters concerning public safety, industrial, transportation and other private radio services, aviation, marine, IVDS, broadcast auxiliary service, personal radio services, point-to-point microwave, antenna tower clearance, and the radio operator examination program.

ARRL Executive Vice President David Sumner, K1ZZ, said the League is disappointed to see McNamara leave the FCC. ''Ever since Ralph Haller left the FCC, Bob McNamara has been our primary contact on policy matters,'' he said. ''We're sorry the FCC is losing him.''

McNamara attended the ARRL National Convention in Peoria earlier this year and met with ARRL Board members there.

SB QST @ ARL $ARLB089
ARLB089 Vanity call update

ZCZC AG69
QST de W1AW
ARRL Bulletin 89 ARLB089
From ARRL Headquarters
Newington CT December 10, 1996
To all radio amateurs

SB QST ARL ARLB089
ARLB089 Vanity call update

As FCC personnel in Gettysburg work their way through the vanity applications that arrived after the September 23 opening day for Gate 2, more new call signs have begun to show up on the airwaves. As of this week, vanity applications received in mid to late October were being processed and another 1700 or so new call signs issued as of December 4. The FCC is still working through several hundred applications set aside in the WIPS (''works in process'') stack for special handling, although Gettysburg reports WIPS have been processed for applications received up through September 27. WIPS includes applications containing inconsistencies as well as those for which the FCC was unable to issue any of the applicants' choices. An FCC spokesman in Gettysburg said he didn't know how long it would take to process the current WIPS stack.

The FCC received another 955 vanity applications between November 8 and November 25. It appears that slightly more vanity applicants now file electronically than on paper.

Club station trustees who recently received a new call sign might have noticed that FCC records for their club stations are not automatically updated to reflect the change in the trustee's call sign. This will not happen until the club files a Form 610 for change of address or renewal (within 90 days of club license expiration). The FCC does not intend to replace club station license documents that show a non current trustee call sign.

Just a little hint Carl... If you want to make an argument, at least you could use a spell-checker and get "Intelligence" correct. Mistakes like that don't lend much your cause.

Mark Fossum - N0NSV (Former No-Coder)

I think the spelling of "Intelligence" says everything for this message.

3106. Intermod and my IC-2000 ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-10 00:00:00 UTC
From: The Paquette's <dpaquett@ime.net>
Message-ID: <01bbe6e7$636ad440$27816ace@default>
Source record: 210562

Hi all,
Was wondering if there was anyone out there that could help me? I have
a Icom IC-2000 ser # : 17156, I purchased it about a year ago for packet.
I haven't used it for packet because of intermod. So, I decided to use
it as a base rig. I wasn't on 2 Mtr voice often till recently and now
find the intermod is extremely tiring to listen to and I feel it
may be a design flaw. (I'm told that the earlier models of the 2000 had
this problem.)
The way it's connected is, through a Diamond duplexer to a Diamond 510. I
originally used a Kenwood with this same configuration and had NO intermod!
This Intermod forced me to use the kenwood for packet. Now if I remove the
2000 and replace it with the kenwood, I get no intermod.
(Ya ya ya! put the kenwood back, well all fine and good, but now the
problem is with my packet station which I use often.)

One might be asking, how close are you to a commercial xmitter? Well as
the crow flies, approx. 1 to 1 1/2 miles.

Well, thanks in advance for any assistance,
Dave (KA1JWM)

>Thanks in advance.

The ideal ground is a ground plate but this is not always practical.
I have found that grounding to the engine block ground works fine.
The driveshaft and prop provide a pretty good ground. I have never
had a problem with this type of ground.

He provoked Mike Galego, KA4MUJ into an on-the-air threat. He played that tape until it wore out. Of course, Mike is no saint either. A couple of years ago Mike played a tape by Fred, (I can't remember Fred's callsign) In which Fred offered a $5000 reward to anyone who could prove that WB2OTK had lied on the air. Mike played this tape every day for about a month straight.

>Stop by 3.8945 and 14.313 and tell Rich Whiten
>what a rotten, low life gutter snipe he is.

Knowing Rich, he'd probably take it as a complement. Besides, why add to an already deteriorating situation?

The fact is, you are wrong to state the no-code Technicians outnumber all other license classes. On what do you base that fact? According to the W5YI web page there are a total of 705,995 Amateurs and 149,745 Technicians (not counting 139,738 Techicians with the code endorsement). That comes out to 21.2% of all licensed Hams. How is this the most, or a majority?

Curiously the W5YI page headline claims that most US Amateurs have a no-code license. Sounds like the headline gets spread around but the real numbers do not.

> Hey CQ VHF magazine, are you up for the task as the voice for the majority of amateur
> operators.

As far as taking a code test goes that means the 556,249 (78.8%) Hams who have taken a code test and passed it?

And mind you, I won't mind when a no-code HF license comes around. I think it will. But in the meantime, let's get the facts straight.

> had a basic understanding of regulations, operating procedures and didn't
> harm themselves or any other person.

I disagree. The technician is not an entry level license class (even
though its the entry point for many new hams) A technician, whether a
no-code tech or tech+, has to pass a second written exam element (3A) in
addition the novice element (2).

In consideration of the privleges given a technician above 30 MHz (the
same as general, advanced and extra) the test adequately covers the
three areas of you mention; regulation, operation, and safety. Then the
question becomes "how do we allocate frequency privleges under a new
system?" If we make a new system.

> After all, no one seemed to agree that Generals, who had earned full
> privileges under the existing system, should have been grandfathered to
> Extra back in the late '60s. This has stuck in my craw since then.

If that was as such an injustice then, why do it again if the license
structure is changed? I probably doesn't matter if you grandfather a
tech forward to general, or backward to novice, there wil be a group
crying about the system being unfair.

Regards

Yes, this is a concern with this form of governance. But actually it
is a concern with any form of governance which has a strong chief
executive whose hands are directly on the levers of implementing
power. (That's why we have a three way system of checks and balances
in our national government.)

>One way of preventing it is to have the chief executive stand for
>election in the context of member-run non-profit organization like the
>ARRL. This can prevent this sort of "capture" of an organization by the
>full-time professionals, who have the time, unlike the part-timers,
>to really focus on dominating an organization's agenda.

The problem with this, essentially a mayor-council form of government,
is that there is grave danger of political patronage, cronyism, and
the other ills that accompany the politicizing of administrative
functions. And defacto, the chief executive is always campaigning
for the next election instead of attempting to efficiently run the
day to day affairs of the organization in accordance with council
policy. He becomes a pawn of the mob, doing what is popular rather

than doing what is right just so he can win re-election.

The mob demonizes (or idealizes depending on POV) the leader in
either of these forms. That too is a grave danger. Too often
blame (or credit) goes undeservedly to the man at the top,
whether he was the driving force in a particular action or not.
(Example: the mob gives Clinton credit for the currently good
economy despite the fact that he has done little to affect the
economy, except in so far as he has attempted to wreck it with
proposals which were fortunately defeated by Congress.)

Real politics is more complicated than the mob's version of
following the man on horseback.

>I got nothing against Sumner. Like most League officials, including
>our Vice Director here, I haven't a clue what his positions are on ham
>issues, since he doesn't share his views with the members he
>nominally serves. (Yes, I do read his editorials. Pretty bland).

That is the issue. We don't know what's going on in the minds of
the individuals involved, and we aren't privy to the backroom deals
that they make. Sunshine laws have opened up civil government so that
the citizen knows what's going on, who is advocating what, and the
nature of deals being struck. We need something similar in the charter
of our membership organization. And we need a strong independent amateur
press to act as watchdog and keep us informed of the shenanigans of our
leaders since most of us can't do that in person.

On the local level, I can go to county commission meetings. I can
go to school board meetings. I can monitor what is happening in my
local government. But on a national level, I can't be everywhere,
see and hear everything, so I have to depend on the reports of others
to gather an idea of what is happening. The ARRL's decisionmaking is
highly centralized behind closed doors at the national office. Most
members don't (and can't) know what is going on other than by reading
the pravda printed (months after the fact) in the house organ. That's
very dangerous.

We can't have any meaningful input into the process when we don't find
out about things until after the fact. This is particularly true of the
work of the ARRL committees. More than the BOD meetings, the committee
meetings and agendas need to be opened up to the membership *before*
the fact, and not months after it is too late to provide input.

A membership organization like the ARRL is not like an ordinary private
business, and can't be run like a for profit corporation. It must conduct
itself in the sunshine so its owners (the members) are informed of what is
going on. That may cause some problems for some of the leadership because
they may be inhibited from doing and saying in public things that they
would readily do or say in private, but that's just one of the costs of
being an official of a membership organization (or of an elected government).

If our officials won't operate in the sunshine, then we don't need them as our officials. (I realize that *some* matters have to be handled behind closed doors, but most of them don't. The burden of proof as to when the doors must be closed should be on those wanting to close the doors, not on those wanting to open them.)

American Morse, 1838, the Continental Code (what we call Morse
today), mid-19th century. Now *Continous Waves* are a early 20th
century invention, but Element 1 doesn't test CW, it tests Morse
Code decoding speed.

>Second,

>airbags/ABS, and doesn't shift that smoothly. But... it smells of steel
>and oil and grease and goes real fast.

Goes real fast? ROTFL

If you want a car analogy, consider Morse the Citroen CV-2 of radio.
It is crude, slow, ugly, and has very little cargo capacity (throughput),
but it runs on most any rotgut gasoline and can sometimes be repaired
by the village blacksmith, or at least be converted into a covered
ox cart.

I'd prefer to stick with that favorite of third world nations
everywhere, the armored Chevy Suburban, or Jeep Cherokee, or maybe
a fancy Mercedes SUV if I'm rich as a Saudi sheik. (IE PACTOR,
Clover, or PACTOR II). Or if the roads are at least gravelled,
then I'll take a Chevy pickup (gunrack optional), IE SSB. And
for the interstate, I'll take that Camry, IE FM via repeater.

I wouldn't be too embarrassed to have an old Chevy up on blocks
in the front yard (it is a southern status symbol), but I'd certainly
be ashamed to be seen pushing a CV-2 down to Billy Bob's garage.

>I hope someone can help me out here :)

You can't reasonably expect to achieve a low RF impedance connection to Earth from the 23rd floor. The main thing to remember is system *balance*. If the radiating system is balanced, no "ground" connection is required at all for good performance. So you should limit yourself to antennas which are balanced, IE dipoles, yagis, etc, and avoid long wires, monopole verticals, etc, or arrange a counterpoise system to balance those which are not. (Note, coax is inherently unbalanced, but by using a balun you can restore balance at the radiating system, and that will eliminate the need for a RF ground to avoid "hot shack" problems.)

It is possible to use the metal frame of the building as an effective counterpoise. In most cases you can treat the building frame as just a tall hill that you happen to be living upon. At some frequencies, you may need to resort to tuning the counterpoise with a "ground" tuner arrangement, though that generally shouldn't be necessary.

The real concern is lightning protection. You *will* take strikes, and different parts of the building frame will be elevated to different potentials. This leads to the possibility of damaging currents flowing through your equipment, or someone else's (or indeed *someone*). So you have to do something about this.

The most effective (and indeed often the only) technique for this is to practice *single point grounding* of your station. And the best way to do that is to establish a *ground window* at your station entrance.

Use of a ground window is a very powerful technique, but you must adhere to it singlemindedly. If you allow even one alternate path around the ground window, the protection it can offer will be lost. In a nutshell, *every* conductor which enters or leaves the area of your station must first pass through the ground window and be bonded or suppressed to it with proper suppressors.

That's *every* conductor, even if it isn't directly connected to any of your station equipment. It certainly means all coaxes and control wiring going up to the antennas, and it also means AC power wiring, telephone wiring, CATV wiring, etc. *Everything*.

This ground window is often called an "entrance bulkhead", and is a heavy copper plate installed in the wall through which all cabling must pass. Hence it is physically like a window. However, it doesn't have to be done that way. The important thing is that it be a physically small heavy conductive plate to which every cable and suppressor is bonded. It doesn't actually have to be a physical window. All the bonds to this plate should be done as symmetrically as possible, IE star fashion. *Don't* use a buss topology.

Polyphaser makes a good line of suppressors for all these different types of wiring, as do a few others, however, some other heavily advertised national brands aren't very effective at all because of conceptual design flaws. This is a subject with several subtle factors, and is one area where lightning mitigation experts earn their fees.

The ground window becomes your station *single point*. By effectively shorting together (for surge) *every* conductor entering or leaving your station at this single point, every conductor will be at the same potential (+/- the suppressor rating, which should be chosen to be within the range your equipment is designed to tolerate), and no damaging currents can flow through attached equipment (or you).

Now during a strike, the single point may become elevated thousands of volts above Earth potential, due to the finite impedance between your 23rd floor location and Earth, but that's Ok because everything attached to the single point is elevated to the *same* potential. Like a bird sitting on a high tension wire, you won't notice any harmful effect of this elevation of potential because everything you touch is at the same potential.

Outside the ground window, you want to bond to anything and everything which has a path to Earth. Cold water pipes should be bonded. Building structural steel should be connected. Etc. *Inside* the ground window *nothing* should be grounded to anything *except* the ground window. It is the station single point and its single point nature must not

be compromised in the least. Don't use a ground *buss*. The Handbook still shows this method of grounding station equipment, but it is a recipe for disaster during a lightning strike. Connect all station grounds together *directly* at the ground window single point.

Connecting your antenna mast directly to the building lightning downleads with #4 was a very good step. This *should* divert the majority of a direct strike's currents into the building lightning mitigation system and frame. Your ground window will protect you from the rest. One caution, however, large currents can flow between this bond point and your station ground window. To avoid damage to coax and control wiring, run a heavy grounding lead between these two points. (Yeah, that'll cause a ground loop, but don't worry about that, the coax shields already did, and the ground window will short out the loop for the equipment on the inside of the window.)

The main thing you *must* guard against is any sneak path which bypasses your ground window. It only takes one to destroy the protection the ground window offers your equipment and you. Don't *ever* run a "temporary" extension cord into your station from some area outside the ground window. Inevitably it will be there when lightning comes to visit, and everything you have will be fried by the ground loop it creates. (I once took $10,000 in damage by ignoring this cardinal rule.)

You *can* avoid damage due to direct lightning strikes. No magic is involved. Lightning follows the same circuit rules as any other electrical current. It is just a very large and very abrupt current. You have to treat it like a RF pulse of enormous peak power (because that's what it *is*).

There is a good deal of engineering detail involved in doing an effective lightning mitigation system. Many things that are unimportant at low potentials and low currents can become very important during the high peak voltages and currents of the lightning strike. Connections which have a fraction of an ohm of resistance can allow large potentials to form across them. And even relatively small amounts of inductance can allow a very large potential to be expressed across it.

For example, one 10 foot section of Rohn 25 has enough inductance to allow about 10,000 volts to be expressed across it during a lightning pulse. (That's why tower owners should bring their cables all the way down to the tower base (and bond them there) before routing them over to the station instead of swinging the cables overhead. If you do it the latter way, the cables can be elevated 10,000 volts or more above Earth potential during the lightning pulse. That can allow cable damage if your ground window has a lower impedance path to Earth.)

>a tuner.

It *might*, if the amp input looked anywhere close to 50 ohms. It
often doesn't though. I've found it necessary to use a tuner between
a "no tune" exciter and a linear on many occasions. So it isn't
unreasonable to consider this option.

>Put a tuner suitable to handle the power level between the amp
>and the antenna. By the way, if the amp has "tune" and "load" controls
>and the antenna is near 50 ohms (resonant dipole, beam, etc) then you
>probably won't need a tuner at all- the range of the tuning controls on
>the amp will match an antenna that is not too far off.

Yeah, most amps *do* still have the "tuner" built in, unlike exciters
which have had it removed so you have to buy it separately as an option.

And if you really need a tuner, I'd note that the MFJ "3 kW" tuner
isn't really capable of handling 3 kW. It may even give trouble
at 600 watts into difficult loads. And BTW, most people probably
won't notice the 1 S-unit boost that amp will give your signal, but

they may notice the splatter up and down the band.

Now that I've rained on everyone's parade, here's my advice for what it is worth. Try the lashup without a tuner first. You may not need one at all. And go ask Tom how to tune up that amp properly so it'll be as clean as it can be. Everyone else on the band will thank you.

Well aware of those requirements (or lack of requirements if you will).
I work with microwave, PLMR, ect. (all are domestic services). I also
have a GROL.

> Licenses were retained for Aviation and Maritime Radio Services because
> of the requirements of international law.

True. The FCC's license requirements for the aviation and marine are
based on international rules. They are international services - so is
the amateur service.

The international fixed public radio service (part 23) still requires
licensed operators.

> I opposed the changes in '84, but they have not turned out to be a bad
> thing, in spite of all the dire predictions by myself and others. Now I
> likewise oppose dropping the Morse code and theory tests. But if the
> dropping of either Morse or theory testing (or both) comes to pass, it
> may not turn out to be a bad thing for ham radio, either. One can only
> hope that will be the case.

Well - the elimination of operator license requirements hasn't wrecked
the services but the skill set of many people doing the work is less
than it used to be. I haven't been in the business that long but I can
tell the difference between the people I work with that came out of the
"old system" and those that are younger.

The biggest thing I see is not so much technical incompetence, but a complete lack of knowledge of the rules and regs of the services these people are working in. I crack up when I tell someone "you can't do that - it's illegal" and see the look of complete amazement on their face. They are even more amazed when I can quickly point things out in the CFRs. Not all are like that - but a good number of the unlicensed people I work with are like that.

Last year there was an editorial in MRT suggesting that licensing requirements be reinstated. The idea came about because of the shoddy work being done by under qualified persons and, in some cases, station licensees being hit with unexpected violations. It was noted that the FCC would not likely re-regulate to that point - but the call was for at least requiring "industry certification" (or encouraging station licensees to only allow certified personnel to service their equipment).

[Up until about 2 years ago my employer required all persons hired to work in the radio/microwave area of our comm department be licensed - even though there was no statutory requirement for it]

Back to amateur radio... Morse code testing does not evaluate technical competence. Therefore, the competence level of the amateur community should be effected by eliminating the code requirement. But even with that fact in mind, I do not endorse the elimination of morse code testing of amateurs. I do support ideas that will restructure the code requirements and take code speed increases out of the incentive system.

Happy Holidays

I wonder if, instead of *bonding* the roof top environment to the station
environment, it would be better to *isolate* the two. If the antenna is
tied to the building structure using heavy, low inductance straps, then
if all cables to the radio are loaded with large ferrite beads that
present a high longitudinal impedance to the impulse, then the protection
at the equipment location could be less draconian (gas tubes, spark gaps,
isolation transformers etc.). The idea of introducing a ground loop does
not fly too well.

> barrier.

My impression is that most of the problem is with the DSP-2232 and it's relatives.
That it seems from what I hear is that AEA never really pulled together the
software for these boxes. Personally, I think going to a DSP based system
was the right move -- and would support all the high speed modes that people
need. The problem is that the software quality just didn't come
together. And the reason for that? Well, only those over there can
really say. AEA never came out with any other high speed packet boxes
since the DSP box would supposedly support those modes. But since the
DSP boxes were always screwy customers went to other products.

It's a sofware project from hell situation. These are pretty common in the computer business.

Jim:

You're taking the interference avoidance issue much too seriously. Be honest with yourself. How long has it been since you've seen interference of any kind based on an amateur's modification and/or deisgn of his own equipment. Again, type-accepted equipment can fail and have equally disastrous effects that ensue without detection and intervention. The bottom line: you're making far too much of the interference "non-issue."

> In summation, Christensen's assumed role of Devil's Advocacy is short
> sighted, because it discusses neither the consequences of such abolition, nor
> the acceptability of such consequences (if however amateurs would agree to
> the resulting restrictions, they are entitiled to do so and I wish them every
> success).

The consequences have been addressed. The material reality Jim is that the amateur environment would not change a scintila, with or without testing.

If the concern is one of interference, then let us propose the testing only for those who wish to deviate from type-accepted equipment. The so-called "appliance operators" would be free of the learning burden and those who wish to experiment can do so through testing.

> Correct me if I am wrong, but isn't band edges a regulatory concern? Under
> those circumstances, I fail to understand how Ohm's Law is relative to a

> MHz.

It's a concern, not a material problem.

> With respect to my so-called deduction, does Christensen have any legislative
> or regulatory evidence to would indicate that the FCC does not have a concern
> with interference? If a theory examination is unnacceptable, with what would
> he replace it with in order to ensure that amateurs are competent to operate
> their stations.

Agreed. Interference is a concern of our FCC. However, the FCC processes *far* more interference complaints that arise from services using type-accepted equipment than from the few amateur out-of-band complaints. Interference resulting from the direct or indirect application of amateur equipment is quite rare. Advances in technology (inter alia, stable, high resolution oscillators), can be credited with this fact. Your premise is based on a false assumption that "If I pass a theory exam, I will not interfere." I hold that based on today's examinations, interference will be generated with or without testing. A knowledge of the allowable spectrum is essential. Perhaps knowledge of allowable spectrum would only apply to my previous hypothetical: testing for non-type-accepted equipment users only.

> But I can assure Christensen that if his neighbour next door hears him on his
> stereo, Christensen will likely to be informed of the problem. Under those
> circumstances, does Christensen believe that he would not have a role to play
> to mitigate such interference? Without a modicum of theory, he would be no
> better than a CBer in suggesting a cure for the problem.

Based on the preceding thought pattern Jim, are you advocating an "interference avoidance" exam? The only issue you've considered for the retention of the written exam is interference avoidance. If the theory portion *only* related to interference avoidance, would you be in acceptance?

> As I stated earlier, Christensen is confused in believing that reading a
> frequency chart is the domain of theory comprehension. None the less, it is
> even more naive to believe that simply reading a frequency chart is going to
> be sufficient to counter any of the problems that are most likely to be
> encountered by amateurs.

Perhaps you're confused Jim. It's been your *only* contention and justification for the written exam. I don't believe you've previously mentioned one iota concerning the benefits of learning theory other than for interference avoidance. Because to learn any more then *absolutely necessary* to avoid interference starts to smell of hypocracy. In fact, it parallels the same reasoning for continued Morse testing.

> That most radioes can be easily modified to operate outside of the amateur
> bands (i.e. the "yellow wire mod" for the IC-706) would belie this notion.

And one can get inside any radio, make any number of modifications, with or without knowing the theory and cause the same ongoing, disastrous results.

Welcome to a wonderful hobby.

I suggest you buy a 2 meter HT that has features YOU can understand. Every brand of radio has its own concept of how a radio should work. Only you can determine which one operates most like you think. Then get on the air. Also as someone else said, look for local ham clubs. Don't be surprized if you find that at one club many members are enthusiastic about brand X; and at club two the members are equally passionate about brand Y.

You will now get a lot of suggestions. After a while, you may have enough info to give you a valid reason to spend more $$ one more features.

Ham radios tend to hold their value very well. So if you spend, say $300 on an HT, you should be able to get at least $200 back a year later. [I am sure the net readers will have a lot of varying ideas on the exact percentage.]

BTW, don't over look Radio Shack for a radio as a possible first HT. They don't have all the features of some others, but that makes them easier to use. Furthermore, virtually all the big brands design one radio for hams, police, public service, etc, etc. then program them to tune different frequency ranges. This is great if you like to use the radio as a scanner and pick up the weather forecasts. However in a metropolitan area, like Chicago, some HTs are prone to overload from transmitters not in the ham band. RS HTs are tuned for the ham band only, which might be a good thing.

Disclaimer: I don't own a Radio Shack HT, but 2 Kenwoods, a Yaesu, and a Standard; all one band models. Sometimes I wish I had made my most recent purchase an ICOM because the buttons are easier to read, but there are conveneinces in working closely with some locals you also have the same model I have.

Remember this is a hobby so make learning about the models and features fun.

Dear Roger,

You know, I feel your pain--from that moment in First Grade when I was the first student in on the first day of class, and I noticed that my name tag was spelled "RoDger", and I just had to bring it to my new teacher's attention. I think I said, "That's not how you spell my name, Stupid!"

That little outburst got me stuck in the corner for a couple of hours, where I watched every other student report to class, look at me, and wonder what I could have done on the first day of First Grade that warranted such a response.

Hey, I thought teachers were supposed to know how to spell! I wonder if that little event altered my perception of authority for all time. Maybe I should seek psychiatric help, now that I think about it.

Nah.

Furthermore, I don't know one freaking "RoDger" in the whole freaking populated world, anyway, so I don't know where these things come from.

Right on for bringing this important issue to the attention of the Internet Community! We "Roger"s salute you!

Happy Holidays.

73, Roger WA3FLE
Norristown, PA

Had I known that Cummings becomes "refreshed" after reading posts
with which he agrees, I would have taken undertaken the extra effort
to better explain his faulty logic. With hopes of due reward, I will
do so now:

You state that "electronic theory [testing], unlike Morse code
testing, is the only means, at the present time, in which
these regulatory agency has assessing the merits of an
individual to operate an amateur station.".

I claim that electronic theory testing makes no such assessment, and
therefore, it is not only not "the only means", it is in fact "no
means".

The reasons that most amateur stations exhibit good practice are
threefold:

a) See and do.
b) Studying rules, regulations and operator practice questions to pass

the test.
c) Appliances are relatively easy to hook up and operate.

Operators don't avoid splatter and stay in band because they know that there's no such thing as a "Taft" oscillator, or because they can compute the resonant frequency of an RLC circuit.

Given that neither theory, nor CW testing prove anything about the "merits of an individual to operate an amateur station" (especially when you define "merit" as staying within band and not interfering with anyone). I see no reason to single out CW as the testing element which must be eliminated. If anything, I would argue that (all else being equal) a ham who uses CW is more likely to be the more well-rounded operator, using your definition.

>
>73, Cecil, W6RCA, OOTC

I take it you haven't been reading this thread all the way through. I am for not just keeping the CW requirement but for increasing the difficulty of the technical components.

IMO, it is quite contrary to what you say. If people are making all this fuss over what you admit is an easy skill, imagine what they'll cry when you increase the technical difficulty, especially if they have no intention of designing or building anything.

I believe you'll simply throw out the baby with the bathwater, so to speak.

For the record, my only transmitter is a CW TX in recently completed - completely homebrew. I say this, not to brag, but simply to counter your implication that people who hold my view might be looking for the easy way out.

Likewise, of all the hams in my circle, most of the no-code techs simply buy their radios (usually handi's) and have no intention of designing or building anything. By contrast, within my circle, most CW'ers build their own transmitters and some their own receivers as well. My experience contradicts your assertion.

BTW, it also contradicts Carl Stevenson's harping on about "CB'ers who beep". I find it quite ironic that the very people he supports are the ones who, in my experience, are most like CB'ers.

Cheers,

Chris. Broadbent (KC5VQL)

Jim:

I can see how your proposal will benifit the Techs and thats good! but in what way
does it benifit Generals like myself? I busted my tail to get the 13 wpm! if I knew
that an *automatic* upgrade to General was just a few years down the road I would
have waited! I was thinking about upgrading to Advanced but with all neat Ideas out
there,I might do better to wait and see what happens <grin> I can do theory in my
sleep and never had to work at it but the Code took time. I have heard every excuse
in the book and none of them were sound. I do believe in compromise and here it
is. 8 wpm for General and above..... I know that change will come but lets do it
one step at a time rather than a phase out of the code all at once.
"He who will not bend in the wind will be broken" I think that Generals will bend
a little but will not be happy to see the 13 wpm dumped so that others have it
a little easier. Code is a skill that with work and time can be mastered and is one
of the few skills left in the Amateur service,

Gee, I use the telephone sometimes. When was that invented? I fly on
airplanes sometimes. When were they invented? I drive in a car more or
less daily. When was that invented? I wear glasses. When were they
invented?

All the above (and CW radios, too) have had implementation
improvements, but all employ the same basic principles (IC engine, rudder,
3KHz bandwidth handset, refractive material, etc.). There are many
things we use that were invented long ago, but are still just as useful
today. Arguing against CW on that basis is a non-starter.

>Think about it ... at least half (probably far more)the people in the

Source record: 210647

Help WTD:Cophasing two Yagi 477 Mhz: Any one has the calculations, theory and practice.

Hello

I am trying to Co-Phase two yagi 16 elements.

Both yagi are folded dipole (300 ohms each dipole) attached to 660 millimeters of 75 ohm cable RG 59. This N plug goes straight in my 50 ohms antenna socket transceiver.

This allows me to and finish at 50 ohm.

I am trying to co-phase both Yagi to increase reception by a couple of dB.

Would anyone knows of a reception pre-amplifier for 477 MHZ. This is really very similar to 432 MHZ. It behave very much the same.

Please E-mail me directly to: aufempen@dyson.brisnet.org.au

The matter is for serious application and urgent.

Thanks

Cheers Guy North

Notice you don't have a question mark at the end of... Never mind. It
was meant to be OKEY. Say it, that's how it I meant to type it,
sarcasticaly. I also am interested in how you've never answered to any
of the questions multiple people bring up of your lack of knoweldge on
the law, claiming to be a paralegal? You said you are going to start a
class action suit against me, yet I have yet to see a subpeona.
You wrote to me:

>2 or more people alledging the same CIVIL charge, in any state you pick, may file a
>class action lawsuit against any individual, and or company.

Obviously, you are a paralegal, and know the law better than my
dictionary, which says class action is "a legal preceeding against a
single partyfiled on behalf of all people having a common complaint.

Yes, I know I misspelled a lot of words, I typed while reading it. But
what I want to know is who are all the parties who have the common
complaint? Us. We are complaining against you. Maybe we should all
file a class action against YOU.
Go away kid, you're bothering me.

haha. Paralegal my doorstop!

>Gary

Gary, if not for long distance communication, why would you
want to use HF? And it is much inferior to VHF/UHF for short
range or wide bandwidth apps.

His point about CW being the common mode in the world
stands. It is a fact that many cannot afford the digital
equipment required to do the fancy digital modes. Phone
doesn't cut it so well for long distance, so they are left with
CW. The USA is quite unusual in the world with its extremely
favourable computer price/income ratio, compared even to
Western Europe, let alone poorer parts of the world.

Cheers,

Chris. Broadbent (KC5VQL)

NOTE: My email address in this post is modified to prevent spam. Just
remove the '.nospam' from the end of it if you wish to email me. It
sucks that I must do this, but the amount of unsolicited crap I'm

>I think the code should be required if you plan to use it or not.
>No, learning the code isn't easy,

You don't know the half of it!

>but if something is important to you, you will expend the effort.

I did, and I have an Advanced license just as you have. And because ham
radio is important to me, I am expending further effort to see that the
hobby survives, which it won't if we are seen as the Archaic Radio Service.

>Learning theory to build a transmitter wasn't easy either, not
>copy ARRL plans but to build one with existing componants, but I wanted
>to do it, so I learned.

You did it because YOU WANTED TO! That's different.

>Learning organic chemistry wasn't easy either, but the degree was important,
so I learned it, haven't used it, but I learned it.

Wouldn't your education have been more useful to you if you could have
taken a more relevent course in its place?

>It took me over 50 hours of concentrated effort to pass the 13 wpm

That's NOTHING compared to what many of us had to do to pass it.

>If it is important to you to get the license then quit complaining and
>learn the code, you can if you want to

I did, to what appears to be the full extent of my ability to do so.
In my case that was enough to just pass the 13 wpm (once the solid-copy
requirement had been done away with). It was so nearly impossible for
me that it might actually BE impossible for someone else is believable.

>The more you have to work for something the more you will value it.

But for those who have an aptitude for it and enjoy it, Morse Code is not
work at all.

For those who don't enjoy it, it is hazing.
"Work" generally implies that the effort generates something useful,
failing that it acquires modifiers, e.g.: "make-work" and "busy-work".
If they also lack the aptitude for it, they will merely struggle with it
and fail.

Then there are those of us who enjoy it, but have little aptitude for it. We do it every day, but our speed never increases. Most other CW operators shun us, and got the League and the FCC to kick us off the DX frequencies to give us "incentives" to do what we have been struggling to do anyway.

>I don't care if CW is outdated.

You should.

>I want people on the air that wanted a license enough to WORK for it.

So to make sure everybody has to WORK at it, you want to keep a requirement around for a skill that is so archaic as to have no use anywhere else.

BTW, the problem on 75m and 14.313 is that there isn't anybody around to cause their license to be TAKEN AWAY if they flaunt the rules, or to make sure they don't keep on operating even in the (extremely unlikely) event that they actually do manange to lose their licenses.

Bob,

You hit the nail on the head--don't worry about missed letters or try to guess the word. Clear the mind and copy what you hear. Eventually, you'll copy it in your head and understand what it means. It like learning a new language--first you translate, later you learn to understand and think in the new language. It just takes practice.

Try 15 minutes a couple of times a day--any longer and the mind wanders...

Hi Cec, Shame on you for believing Samuel had anything to do with CW, which came into being in the early 1920s (just a few years before voice). You know better than to confuse Morse code with Continuous Wave emission. That's like telling those who yack into microphones that they're using a form of communication that is millions of years old.

Well, last nite I got another candidate. A friend (another ham) called me and asked if I could look up somebodys callsign on the internet if he told me the persons name. Seems the person had taken the test and not received his license yet. So he gave me the name and I looked it up, and found the call. 'We have a new ham in Guam and his call is ....' I told my friend on the phone. He replied, 'Well, no, not really. This guy is into hang gliding, and he has been using a pair of UHF HT's on the ham bands for years, with no license, because he knows nobody is going to go after him. But he is going on a

trip to Austrailia for hang gliding, and somebody told him in Australia if you get caught on the ham bands with no license, it's a big fine. So he figured he better get a license.' Another great reason to become a ham . Too bad nobody told him about GMRS or those little 49 mhz HT's from Rat Shack.

>I'd be willing to entertain pros and cons and act on the net's overall
>consensus over the next few months.

Paul, I think it's great that you maintain the list. But it is getting a bit large. I think a monthly or biweekly posting to tell people where and how they can get the list would be a better idea than posting it regularly. As many ham radio web sites as there are, I am sure you wouldn't have any trouble getting a bunch of people to put the list on for you. Anyway, keep up the good work. I'll keep looking for a new ham that doesn't hang glide and doesn't need an HF rig with 11 meters on it.

> to me.

No. That sounds like the FCC's rationale in allowing a 5-million watt
UHF television, 100,000 watt FM, or multi-tower directional AM system
to be operated, maintained, and yes, modified to a certain
degree by *anyone* without an FCC license. Aside from the broadcast
station
maintaining a "Chief Operator" statement in their public inspection
file,
the Commission has relaxed the technical knowledge requirement for
broadcast services (under 47 C.F.R 73) to......zero.

The potential for interference with multi-tower arrays is significant
if they're not maintained properly. This requires a substantial
knowledge base
and skill set. And yet our FCC feels so strongly about the knowledge
base
issue and potential for interference, that they've long since eliminated
the licensing requirement. The burden for ensuring compliance now rests
squarely on the shoulders of the non-technical station owner.

Again, I'm not advocating the elimination of either the written or Morse
sections of the amateur exam. To the contrary, I have only been trying
to
relate the absolute necessity of a written exam to that of CW testing.

Sorry, but forcing theory on those who have no interest is just as bad.
Maybe it's time to bring amateur radio in the 1990's and recognize that
the ARS is not cutting edge, not the playground of the techoelite. It's
time to recognize that it is now a HOBBY plain and simple

>
> >The more you have to work for something the more you

Query ...

let's say a ham just happens to be scanning across the band late some night and happens to pick up a CW transmission.
Now, let's say the person sending the transmission happens to be a ship, plane, or what-ever in dire need of help.
The alert ham, knowing his code jumps in to lend assistance in what-ever way he/she can, possibly saving the person(s) on the other end of the xmission.
Isn't that what ham radio's all about? Helping people in emergencies during assorted disasters?
I don't think it's right that someone might not live through an ordeal just because the 'ham' didn't understand what was being sent.
Some of you might think.... Well, they could have sent it vocally ...
Think on this one, what if their mic was damaged, it would be easier to 'pound out' an SOS then to just throw their hands in the air, hoping the friendly 'ham' happens to hear their plea.
One of the MAJOR reasons amateur radio was created was to help during disasters, but how can they help when they can't understand what's being sent?

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc
Body handling: Binary attachment payload not displayed: HFANT.GIF

I installed this HF multiband vertical at my QTH about 8 years ago, and it was about 8 years old (though new in the box) back then, and now I can't find the paperwork on the antenna. I put it up anticipating an upgrade to General eventually, but never found the time to upgrade, so it has gone without use all this time. It stands about 30 feet tall or so, and required radials for each band, in the configuration that I assembled it in. I seem to remember assembling it for CW use, but now wish to operate phone on 10M. Does anyone out there recognize it? Better yet, does anyone have a copy of the assembly instructions that I could obtain a copy of? I still have the additional two tubing segments required for phone use, which were never installed. Help!

An eyeballed GIF image is attached for your entertainment (hi-hi). >:)

Here is another slant on it:

In a pre-WW2 issue of QST, someone wrote in complaining about the use of "we" instead of "I" in ham conversation - funny how that same subject is still in debate!

Anyway, one response was that it was ok to say "we" since indeed there are two entities involved: the operator and his station. When we say that "we" worked so-and-so, we are actually giving credit to the station as much as to the operator.

In those olden days, our equipment was very much a part of ourselves since it was largely self-designed and homebuilt. So, it was natural to feel a certain companionship with our rigs which expressed itself in the unconscious use of "we" in describing "our" activities.

For what it is worth, I seem to recall that Weather Bureau instrument stations for temperature, humidity, etc. are only five feet above ground level in a little ventilated house designed to prevent any local wind effects. So, maybe there is a conflict between wanting to gather wind data along with all the other types in a single installation up 30'.

I just saw that Richard A. Burton (ex KG6GKS...) just made the front page of the Metro section in the LA Times. According to the report, he has the distinction of being the only ham ever jailed for broadcasting
without a license. The FCC issued him a callsign in error after he came off his latest probation and then revoked the license when it realized what it had done (typical bureaucratic response).

My main complaint is: Why is it that stuff like this makes the headlines? We have enough problems in ham radio without getting another black eye from the mainline media. We need to make sure our other contributions get recognized.

> 73 & GL Bill Bosler - WF3M

Hi Roger,

I'll add my two cents worth; I suggest you get the internal tuner, and
you'll need the hi-power tuner too. You'll like the internal tuner when
you aren't using the amp, which will likely be most of the time. When not

using the amp, you can have the big MFJ tuner switched to "direct". When the amp is in line, you can use the internal tuner to fine tune into the amp input. It should reduce IMD and may give you more power out on some bands, like 17 or 12 meters.

Hi Meade,

I suggest, since your ground lead is so long, that you may have some RF problems. To minimize them, you should use coax for the ground lead. Connect one end of the coax center conductor to ground and the other end to the station ground buss. At each end of the coax connect the coax shield to the center conductor using a .01 mfd ceramic capacitor. It should help minimize the RFI and TVI.

3173. Quick Money I promise!!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-11 00:00:00 UTC
From: david naranjo <din9630@garnet.acns.fsu.edu>
Message-ID: <32AF97CC.5A75@garnet.acns.fsu.edu>
Source record: 210329

Quick Money I promise!!!

Get five pieces of paper and write the following on them..." PLease put me on your mailing list. You are # 4."

Get 5 one dollar bills and fold one in each piece of paper. Make sure you hide the bill as good as possible. Theives abound. Get five envelopes and address them to the following people:

1. Nancy Shain
Rt 3 Box 3396
Poplar Bluff MO 63901

2. Jerimiah Stuppy
467 Enders Rd
Halifax, Pa 17032

3. Dan Wood
1201 A Anderson ST
San Clemente, Ca 92672

4. S. Stapleton
6329 Hwy 135 N.
Lake City, Ar 72401

5. Y. Creed
1634 Roswell Dr
Tallahassee, FL 32310

How it works!!!

Ask someone how to post messages on your computer. Save or copy this message along with the addresses-except move #1 off the list move 2-3-4 and 5 up and put your name and address at number #5. Post this message in at least 200 news groups. THe more the more money you will make. ***Everything is legal as long as you record the names of the people who will be sending you $1 bills! By doing this you are creating a service. Making a mailing list at $1 a pop. Many people have made very good money off of this over a very short period of time.

If you are interested please try it. It costs only five dollars and five stamps and envelopes and that is it!!!

Remember the internet is constantly growing- so even the most minimal responses will you reap you a good profit!

Good luck and remember don't cheat. You won't make money if you do. OTHERS ARE WATCHING these postings. Mail the people on the list only $1

each-remove the first name-move the others up- put your name at the bottom of the list and you are in business.

GOOD LUCK

Hello all,

I got a burned out zener diode in an audio-amplifier. After placing some
telephone calls I found out the type: a HZ-22-2L, japanese making.
I want to replace it with a type that allows higher currents, but
I need to know the zenering voltage. Has anyone info on this diode?
Detail: it is diode number D-112 in a Luxman L-230 amplifier.
Thanks in advance.

To all concerned:
I'm Not a "chicken little" cowering in fear looking for black helicopters , X-file type conspirices in all aspects of daily life, nor do I intend to off myself from the Brooklyn bridge to prevent the sinister powers that be from snatching our frequencies. All I want to do is prevent COMMERCIAL interests from eating us for breakfast. And just a word of note here. Iv'e noticed that most of the people telling me to shut up are those who work for Bell labs, MCI, Lucent, and so on. Just the very self same groops that Want us to shut up and die.

3181. Help! Phone ops on 7.025 from VE-land!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-11 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <58mk2g$lgi@dailyplanet.wam.umd.edu>
Source record: 210469

I know that one can often hear SSB on the low end of 40

1) during SSB contests, such as CQ WW, and
2) during natural disasters

WHY were these people camped out today at 1200z from the Canadian Maritime provinces (Dartmouth, N.S.) running a LSB net on 7.025???

Do they not realize that there's LOTS of bandwidth above 7.050??? Just because you CAN transmit somewhere does not mean you should - especially when there's no emergency of any kind afoot.

Anyone want to go and ask them (politely) to move up the band???

I know there's no bandplan in Canada, but my experience has been that the phone ops generally stay above 7.050 unless completely squeezed out.

Probably very quick--there will be a push to do away with the classes altogether. (A classless society....I know I've seen this somewhere)

: through handicap or living in the middle of nowhere).

Yes, it was already there. As I recall, one had to live more than 150 miles from the closest location where the FCC conducted exams on a regular basis. In some cases, the FCC conducted those exams only *quarterly* at some locations. In my case, Detroit was about a 60-mile trip, one way. We had a bit more than a $6 examination fee at stake then. Seems like it was $8, even in 1966. Also, failing the General code test meant that one didn't get to stay for the written test.

Strangely, I understand that some of the Generals and up, looked down on those who held the Conditional Class license; sort of like the way some look at those who have a waiver for code today.

KAWIN NEWS - Announcing KaWin 6.47

KaWin 6.47 is ready for download from the KaWin Home Page:

http://www.mutadv.com/kawin

Enhancements include:

Support for the Radio Amateur Callbook ("Flying Horse") Call Sign Database, including automatic lookup on connect.

Distance, heading to station and reciprocal heading from station is now included in the result of a call sign database lookup.

New "p" and "l" macros to insert your geographic position coordinates and locator grid.

Any macro may now be forced to uppercase.

A "Print Selection" command joins the Pop-Up menu.

The first edition of the KaWin "Frequently Asked Questions" (FAQ) is now a part of both the KaWin Help file and the KaWin Home Page. I am still compiling "Tips" for a separate topic and your contributions are needed. Input is solicited from tire-kickers as well as new and old registered users.

Please send all contributions to: stan@mutadv.com

The KaWin News mailing list has been purged of all problem email addresses. If your address was inadvertently removed please accept my apologies and re-subscribe. Please pay close attention to the email address you provide and/or the "reply to" address set in your email client.

To subscribe to the KaWin News mailing list, send email to stan@mutadv.com with the word SUBSCRIBE in the subject line, or use the handy subscription link on the KaWin Home Page. To be removed from the list, send email to stan@mutadv.com with the word UNSUBSCRIBE in the subject line and be sure to include the email address this message was sent to in the body. I cannot remove you if I don't know your address!

Who the hell is "Burp" and who cares what he thinks? In what other area of one's social life is it necessary to avoid using "I", instead using a pronoun which is COMPLETELY inaccurate? (unless you have the proverbial mouse in your pocket)

I once read some psychologist's theory on this: many people are not completely comfortable talking to strangers, nor with having the world hear what they are saying. There is a subconscious comfort in saying "we" as opposed to "I". That explanation makes some sense. How else could such a ridiculous habit proliferate like it has?

That is so ridiculous! Gee, where did you get TWO of those company names from, I wonder? 8v{}

Lucent/Bell Labs have several amateur radio stations at their various facilities, and employees who run clubs and repeaters. Many of the people who work here are about the most technically knowledgeable, eccentric, and non-establishment as you can get!

I personally distrust almost every word out of the government's collective mouth, including "It was just a weather balloon" and "There is no secret base in the desert" and "No missles were fired in the area" and "None of our troops were exposed to biological warfare." I doubt all of these assertions with every fiber of my being.

It's really the Feds who you should be pissed off at: They're the ones who organize the radio spectrum auctions, and they'll gladly take anyone's money as long as it's to the highest bidder! The so-called commercial interests can't buy something that't not FOR SALE. So go bitch at your government, pal.

Nobody wants you to shut up and die, but we'd like you to regroup a bit. How are you going to bring about positive change so that your bands don't go away? That's the question. Once again, I implore of you: Do something constructive. Don't ramble like a paranoid. Makes us look bad.

We have an excess spool of 1 5/8 inch gas heliax which we wish to sell.

This spool is new and 230 foot in length.

This cable is very low loss. We will be selling the entire spool
in one piece, on a first come basis. We are asking $7.00 per Ft.

If you or your club can use this cable, please contact us.

Regards,

Edward Addy
Director
NACEC Center

3200. hf antenna setup advice?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-11 00:00:00 UTC
From: hopewell@ctg.net
Message-ID: <850330271.30743@dejanews.com>
Source record: 210488

Hello! I'm wondering if anyone can give me some advice on a station
I'm planning on setting up in my townhouse next month. I don't want to
cause all sorts of TVI and RFI problems with my neighbors, but as an
old HF junkie who's been out of it for about 5 years, I can't say no
to my favorite hobby anymore! Here goes:

I'm going to be purchasing a Kenwood TS-570D and using it with an
Astron RS-20A power supply in my shack in an upstairs bedroom. I'll be
wrapping the power lead around a few chokes as it comes out of the
back of the 570. My ground wire will run about 25 feet (quite long, I
know ...) down to a rod in the back yard. I am going to attempt
operation on as many bands as possible (with the 570's built-in
tuner) on an 80-meter dipole fed with about 75 feet of RG-8X. Due to
the layout of my townhouse complex, I'll have to limit the antenna's
height to a REAL LOW 15 to 20 feet or so above ground. The antenna
will run basically parallel to the back of a line of 10 townhouses,
at a distance of about 25 feet or so. I plan to form a choke in the
coax where it meets the antenna's center insulator, to minimize
feedline radiation.

Our townhouse complex somehow (unbelievably) left rules against
outside antennas out of their lease, so I'm not breaking any rules.
However, I don't want to start any new ones! So I'm planning on
making this installation as invisible as possible. The antenna will
be hidden in trees, and the coax run from the townhouse to the trees
will only be laid out when I'm operating. I am very concerned about
the possibility of TVI and RFI, and I want to do everything possible
UP FRONT to limit it. The complex has underground electric, phone and
CATV lines, but the cable coax for all the units in my row enters

at
the far end and runs through all our attics, parallel to and about
30
feet from my planned antenna.

I think I've included all the facts. Please critique my
arrangement
and let me know if there is anything I should do to modify it.
Please
keep in mind that I plan to use the tuner in the rig with a
coaxial
feedline. And I would rather not run QRP all the time, although I
can
make myself happy with less than 100 watts. Whaddaya think?

Hello,
Does anyone have any suggestions on getting APRS 7.7 to Recognize and communicate with a DSP-232. I tried going to the comm screen to get the command prompt and then tried to Initialize. I was never able to get a command prompt at the comm screen. Any help would be greatly appreciated! 73's

Hi,

I'm just curious, ie bored, and gotsta know...

(1) Why is it everyone immediately wants to open up their radio and 'modify' it for some worthless cause, like transmitting out of band, but are terrified to 'modify' it (ala VHF radios) for 9600 baud packet?

(2) Why do people think advertising a radio as having had all possible mods done, is a selling point?

>>I have a ICOM IC-706 and want to install it on board my 30' sailboat.
>
>>Instead of installing a ground plate, can I run the chassis ground
>from
>>the radio to the YANMAR diesel engine to provide the necessary safety
>of
>>not being shocked? What are the pros & cons of such an arrangement.

The ground plate you refer to is probably for an RF ground.
the RF ground acts as a counter poise to your antenna, and enables
the antenna to radiate. There are a few do's and do not's on RF grounding,
but just keep in mind that SHORT wires going to you ground are better. Some say
that a wire overboard in the salt water helps make a great ground. I think if you
can build an artificial RF ground on board you would be better off.
A WORD OF CAUTION. I have heard of people who have developed expensive
electrolisis problems by grounding to the boat keel. It may be worth getting
some advice from a pro.

Sounds like a great trip good luck.

BTW, I am looking for Modifications to Yeasu 440 Handhelds. Please let me know
I can find this info.

You seem to be starting off with some odd assumptions -- that amateur radio
is all about high tech whizzyness. Maybe part of it is in taking techniques
developped in the commercial world and taming them enough for amateur use,
but this isn't the essence of amateur radio (at least not to me).

It is one of the *problems* with amateur radio.
You pretty much say so yourself:

> Maybe what is really the issue here is how to motivate the technically
> advanced folk to work their magic.

Why does it *have* to be magic ?
What happened to the idea that amateur radio was not only being able to
talk to people in strange, far-off foreign lands, but to do so using
equipment you put together yourself ?

What happened is that the technocrats took over, and rammed SSB with synthesized
frequency control down everyone's throats.
Putting together a CW station was (and still is) easily within the grasp
of virtually anyone prepared to spend just a little time. But CW isn't for
everyone (no matter what some of the luddite elitists might want). Well,
building a high power audio amp, and using this to modulate the output of
the CW transmitter was pretty easy too.

But these days, just try putting out an AM signal, particularly one which may
be crystal controlled, or which may use a VFO which drifts more than a couple
of cycles per hour, and see what comes back.

The technical chasam between a home constructed CW/AM transmitter and receiver,
and a comparable SSB setup is gigantic. This pretty much killed off homebrew
of amateur stations.

Isn't there enough magic in making those contacts on home made equipment without
having to have techno-magic ?

> with higher bandwidth, now lower.

You are missing the point. Digital isn't better. It only works because of massive
redundancy, transmitting the same thing over and over, or transmitting the information
in a form with enough redundant information to allow reconstruction. Digital,
and spread spectrum are really just brute force approaches.

If you want instant, guaranteed connections, go play on the internet.
Actually, I think that is where a majority of amateur radio license
holder actually belong - enough of them seem to be trying hard to
emulate those technologies on
the amateur bands.

If you want to see what is wrong with amateur radio today, look at the faces
and listen to the comments when a favourite repeater goes off the air for a
few hours.

Better still, listen to those "DX" workers, whos idea of DX is to go to a
mountain top, sit in the car and blast out a couple of hundred watts to see
home many repeaters they can raise ...

Amater radio probably has to be broad enough to encompass people who see it
as a personal communication medium, the whizz-bang techno mob, the "CW is the
only true religion -- you will all be assimilated !!!" gang, as well as

those
who are interested in just exploring the magic of the medium of radio. But above
all, it had to have a low entry threshold. You can say that it does - FM HT's and
repeaters. But that is a dead-end, as many amateurs find, needing to spend a fortune
to completely re-equip to do *real* radio, many lose interest, or just stay put
on the local repeater.

So, my recipe for rejuvenating amateur radio ?
Forget the techno-geek stuff, too expensive. Forget the CW requirement.
Instead spend time on simplifying and reducing the cost of the equipment needed
to make *DIRECT* contact with people in strange foreign lands - forget satellites,
that isn't REAL amateur radio (yes, it is interesting, and yes, I do play with them).
REAL amateur radio is making those contacts without making use of intermediate
high-tech-beyond-your-means items like digital repeaters in space.

>Steve Stark N4YOG (steves68@mindspring.com)

Can't comment on the APRS specifics but I do know that
about half of the DSP-232's firmware modes have bugs in them.

In in original V1.0 firmware, the unit isn't CCIR compatible, won't
properly maintain phase-lock in AMTOR/SITOR mode B,
can't maintain phase-lock in Navtext, has only mediocre copy
in PACTOR, not all modems are implemented, etc, etc.

I recently talked with the ARRL about their recent review
of the DSP-232. They admit that they didn't have the unit
long enough to discover all of the software bugs which have
now come to light.

AEA recognized this and has shipped revised frimware chips.
Did you send in your coupon packed with the DSP-232???

I got the new firmware chips about two weeks ago.
Haven't installed them yet so don't know how much they will
help although reports are that some of the bugs have been eliminated.

If you haven't received the new chips by now it's is probably too late
- with AEA shutting down.

Hopefully, someone will pick up the firmware support for their TNC
product line. There's probably a good business in upgrading PK-232,
DSP-232 and other model's firmware.

ARRL Bulletin 90 ARLB090
From ARRL Headquarters
Newington CT December 11, 1996
To all radio amateurs

SB QST ARL ARLB090
ARLB090 ARRL Instructor of the Year Nominations Open

Nominations are due to ARRL Section Managers by January 31, 1997 for the ARRL Instructor of the Year awards. Each year, the ARRL Board of Directors selects recipients for each of four award categories.

The ARRL Herb S. Brier (W9AD) Instructor of the Year Award is presented to a nonpaid volunteer instructor. The Herb S. Brier award is cosponsored by the Lake County (Indiana), Amateur Radio Club. The ARRL Professional Educator of the Year Award is presented to a paid, professional teacher. The ARRL Professional Instructor of the Year Award is presented to a paid, but not certified, instructor. The ARRL Excellence in Recruiting Award is presented to someone who recruits more than teaches. The ARRL Excellence in Recruiting Award is cosponsored by Lambda Amateur Radio Club (USA).

Section Managers forward nominations to the Educational Activities Department at ARRL, and EAD will send details to nominees about how to compete for the awards. See QST (page 12) for your section manager's name and address.

In article <32AD4EA9.4DB7@ccse.net>, Paul Christensen <paulc@ccse.net> wrote
in response to Jim Cummings:

>You're taking the interference avoidance issue much too seriously.

He's not taking it any more seriously than does the FCC. It is indeed
their primary concern with regard to regulation of the services. Ask the
FCC if interference is a non-issue - it is in fact THE issue. Jim is
absolutely correct about (aboat) this. It's hard to believe you would
argue this most obvious point.

>The consequences have been addressed. The material reality Jim is that the amateur
>environment would not change a scintila, with or without testing.

It's funny that some argue that amateur radio will turn into CB if code
testing is dropped. By contrast, you would have us believe that nothing
would happen if the written exams were dropped. It's no coincidence that
both assertions are probably dead wrong.

>If the concern is one of interference, then let us propose the testing only for those
>who wish to deviate from type-accepted equipment. The so-called "appliance operators"
>would be free of the learning burden and those who wish to experiment can do so through
>testing.

Please demonstrate the need which would be served by such a change.

>> Correct me if I am wrong, but isn't band edges a regulatory concern? Under
>> those circumstances, I fail to understand how Ohm's Law is relative to a
>> regulation that states that amateurs may operate in the band from 3.5 to 4.0
>> MHz.
>
>It's a concern, not a material problem.

It points out a material problem for your claim that the written
examinations do not require the applicant to know the band edges. (See your
post prior to Jim's response.)

>Based on the preceding thought pattern Jim, are you advocating an "interference
>avoidance" exam? The only issue you've considered for the retention of the written exam
>is interference avoidance. If the theory portion *only* related to interference
>avoidance, would you be in acceptance?

If your only reason for pursuing this line of reasoning is to try to make
the point that theory can be dropped for the same reason that Morse can
be dropped, it should be painfully obvious even to you by now that you're
having to stretch pretty far to try to provide closure on the point.

>> As I stated earlier, Christensen is confused in believing that reading a
>> frequency chart is the domain of theory comprehension. None the less, it is
>> even more naive to believe that simply reading a frequency chart is going to
>> be sufficient to counter any of the problems that are most likely to be
>> encountered by amateurs.
>
>Perhaps you're confused Jim. It's been your *only* contention and justification for the
>written exam. I don't believe you've previously mentioned one iota concerning the
>benefits of learning theory other than for interference avoidance. Because to learn any
>more then *absolutely necessary* to avoid interference starts to smell of hypocracy. In
>fact, it parallels the same reasoning for continued Morse testing.

This whole idea of dropping the theory requirement is a moribund brutally bludgeoned equine. If it weren't for the fact that some folks here are unable to discern the difference between a Morse code test and a written examination, the ludicrous idea would never have even been introduced in the first place.

Yes, if A=B and B=0 then A=0. But if A is not equal to B, then A does not equal 0. The purpose for the code exam is not the same as the purpose for the written exams. The need for one has evaporated, the need for the other has not. Hey, it's a great mode to operate, but you will have a great deal of difficulty standing in front of an impartial audience and convincing them that the government has a need to require Morse code as a condition for radio communications licensing in the 1990's. The sooner you come to this realization, the better you will feel when the change actually comes to pass.

>And one can get inside any radio, make any number of modifications, with or without
>knowing the theory and cause the same ongoing, disastrous results.
>
>-Paul, W9AC

The government evidently feels some responsibility to it's constituents. Since it grants permission to allow amateurs to modify, build, repair, locate and build transmitting stations (almost) at their own discretion, self-police etc, it has a moral and legal obligation (perhaps even a liability) to qualify those who have been granted such privileges - hence the written exams. (Seems a reasonable expectation that people licensed to do these things would know something about it.)

What modern day obligation to the people does the government now fulfill by maintaining the code requirement? It fulfills not a obligation to the people so much as, for the time being, placate a portion of the ham community - after all, we're the only ones left who even care about Morse code one way or the other. I suspect that in the long run, the FCC will conclude that Morse code is an unnecessary requirement, and that the amateur service will continue to be able to fulfill it's charter in the absence of the code exams.

----> *SNIP* <----

I have an even better Idea (and Don't Laugh!)...

Split ALL licenses in half. Written and CW. Have 2 ladders.

1. Technician, General and Extra, for Passing
only written exams. Give these people "Phone & Digital"
privilages.

2. Technician+, General+ and Extra+ for passing
Written with CW. Give these people "Phone, Digital & CW"
privillages.

Here is how testing could be without changing much:

CLASS Elements PRIVILLAGES
----- -------- --
Tech. 2 & 3A (Current Novice + Tech Phone & Digital)
Gen. 3B & 4A (All Current Phone, Digital EXCEPT Extra Area)
Extra 4B (All Phone & Digital)

Tech.+ 2 & 3A & 1A (Current Novice + Tech Phone, Digital & CW)
Gen.+ 3B & 4A & 1B (All Current Phone, Digital & CW EXCEPT Extra Areas)
Extra+ 4B & 1C (All Phone & Digital + All CW segments)

Sounds a bit crazy, but, with some refinement it could work. I love CW
and I can't see why a very simple 2 ladder system can't work. Make CW
a privillage not a penalty. (I'M A DIEHARD CW OPR.) If someone wants
to talk into a mic or send data, just make sure that he can pass a
descent written test. Rules & Regs, and some good old theory. Then, if
you want to get on CW, earn that privillage.

Just my $0.02 worth.

Seasons Greetings,
Tom - K1TJ

Yep:

You can bet that someone is going to figure out a way to modify a Golden Eagle to operate on 75m, complete with "Roger Beepers", Moonrakers", and "Black Boxes". We will refer to their operators as "The One Mr. Coffee Man" or "The One Mud Dauber". QSOs will be started simply by saying "How 'Boutcha?"

Whattaya gonna do but start shopping around for another hobby?

For sale..

Yaesu FT-50R Handheld, dual band transceiver. I would like to buy
a mobile; that's why I'm selling the HT. Works excellent, only a few
months old.

$300 including UPS 2-day shipping (in the US) once payment is received.

Includes: - 5 watt battery (FNB-41)
- manual, box, and warranty card
- wall charger (NC-60B)
- rubber duck
- Wide band receive (gets just about everything!)
- DC battery voltage display
- DC direct input capability (great in the car.)

Email me for more information or if you're interested!

I wonder if an antenna tuner could provide enough capacitive reactance to
cancel out the inductance from the typical power wirewound? Its difficult
to get the wirewounds to resonate in a tank circuit in order to get a
feel for their inductance. (kind of a low Q inductor, they are.)

If you could offset the phase shift from the inductance, the rig should
feel just fine about working into a resistor of this type. I suppose
once the value of capacitance in determined, one could include a capacitor
in series with the resistor. You'd be stuck with a fixed test frequency
with a fixed value of capacitance though.

Any reason the load has to be a DC load?

Who told you that? Mickey Mouse? They are too bound by the law to stay
within their bands. The military may not come up on any freq they
desire. Don't know where you got your info from but it is totally
bogus. Imagine the military if they could come up on, let's say, your
TV while the superbowl was on or some other one of your favorite
shows. That is the same thing.

>At Coast Guard Radio Honolulu we brought our 10kW transmitters up on

We did work around the problem but when we found out they were
interfearing with the local and state police then that was different.
They are primary users on their bands unlike us on 440.

>The example of the "spur". Well sir, spurs are NOT legal. Your spurs

Carls' problem is that he thinks, period, end of sentence. I belong to a club, the president is a nocode tech, more than 70% of the dues paying members are no code techs. We are going to set up a special event station celebrating our 25th anniversary. 2 radios..one SSB, the other CW. It was decided by the prez to do the cw as SHE wanted people to see what it's all about. It was brought up and voted on, and passed very handily. Plus (my idea), we are letting anyone who wants to try, the chance to transmit, either SSB or CW, their choice.

I realize Carl will disagree, seeing that we are perpetuating an antiquated mode, but then again, I don't really think we'll be hearing him on the air (10 meters still isn't that reliable into the midwest yet)

: I need to know the zenering voltage. Has anyone info on this diode?
: Detail: it is diode number D-112 in a Luxman L-230 amplifier.
: Thanks in advance.
: -- Rob

That Zener is a 1/2 watt, 22 volt diode. The equivalent replacement
sold by Philips ECG is ECG5030A. They also sell 1W-ECG5080A,
5W-ECG5136A, 10W-ECG5197A, and a 50W-ECG5263A. You can also use
Zeners of different voltages in series as long as their total voltage
equals 22V.

Good luck...

I was on the receiving end of many a distress and lessor priority calls while working as a USCG CW op. The distress system that has replaced CW is plagued with problems, including countless false distress calls. But the new system is easier on the budget (computers rather than manpower). Keep that in mind: CW was replaced due to government down-sizing.

The person who made the decision to drop MARS CW happens to be a no-code tech. Guess he felt a bit embarrassed not being able to copy MARS traffic, so instead of learning the code, he used his power to forbid its use.

> N1AUP

To: N1AUP. and others.

I have a military surplus 30 KVA 3 phase 60 Hz. diesel Generator, still
needing some repair on the
electronic speed regulator. It is NOT small! It is NOT quiet! I have no
idea how much it burns at idle,
but I'll bet it is a bunch. It is mounted on a 2 wheel trailer, stands
about 8 feet high, is about 8 feet wide
and is about 8 feet long. I have no idea how much it weighs, but it
probably is in the range of 4000 lb.

I had a 10 KVA Ww 2 AC gen that ran very well, but got rid of it. (I
moved). It would not come off idle
when I used it to excite an AC welder at 10 KVA. If you have a military
surplus Gen, don't worry about
allowing for overcapacity. The military already did that. I was told they
would deliver 3X the mil rating.
Generally the surge rating is mentioned on the unit. 50% over should be an
overkill.

I expect that you would be far happier with a well muffeled 3.5 KVA
120/240 12 VDC output Generator.
Also remember that you might be able to investigate carbs that can handle

natural gas or propane/butane.

Also remember that a diesel gen is hard to start in cold weather. You may need ether.
Good luck. Hope this helps. Ed WA5SWD

Hi Anthony, I highly recommend you ground your rig via the keel bolts in the bilge. Your keel makes a *much* better ground plane than attaching copper plates to the hull. I used this arrangement on a Hawaii-to-San Francisco crossing (22 days) and had solid comms on 20m the entire trip. The phone patches to the weather service and to family members sure were comforting when I was 1000 miles from any piece of land! (The trip was done on a WestSail 43.)

Good luck and happy voyaging!

>EVAN TRY WHITEHOUSE.GOV, AND BY THE WAY, I ALSO EMAILED YOUR WEB PROVIDER
>AND THE CHEIF OF THIS NEWSGROUP.

Well just who is the "cheif" of this newsgroup? I bet you pissed him
off by misspelling his title! ("chief")

And why do you keep advertising on here? You haven't read the rec.radio
charter, have you! Go to rec.radio.swap and place a say, twice per
month notice on there pointing to your web page. (But that would even
be a violation of the rec.radio charter since you'd be posting a
commercial ad.)

I'm surprised someone hasn't complained to abuse@worldnet.att.net and
postmaster@worldnet.att.net for your continuing commercial ads on here,
repeatedly violating our charter. This is a recreational not a biz ng.

Anyway, good luck on your business (as long as the advertising is conducted
elsewhere).

Uh, yeah. The military can come up where they want, when they want,
how they want. We just look at it as the sound of freedom.

3238. Query: Weather Station w Computer Software

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-11 00:00:00 UTC
From: Wendell - W5FL <w5fl@flash.net>
Message-ID: <01bbe721$16424740$44dfb5cf@w5fl.flash.net>
Source record: 210594

I would like to buy a weather station that I can mount at about the 30 foot point on my tower. Principle measurement desired is windspeed (average and gusts) and wind direction. Would also like to have barometric pressure, outside temperature, dewpoint, and possibly humidity. Cables will have to be 150 feet and would like to have a local readout as well as to hook it up to the serial port on my computer and keep the wx info continously for later recall.

The data would be valuable for RACES in real time (yes, I am a member) as well as general wx info (is it going to freeze tonight and kill the garden).

Radio Shack has been promising such a station, but has now slipped promised sales date from November to February 1997. Davis and Peet Bros make a station, but when you add their software costs, the cost is easily over $500 for a basic system.

I need to find a way to mount it to a ROHN 45 Tower very ridgidly if it is going to measure wind speeds to 110 mph or higher. I live on a hilltop location and good weather is *not* one of the benefits. Lightning protection for the sensors and inside wiring is a very real problem as the tower is one of the highest structures in the area. It will also set about 35 foot below a 1500 watt hf antenna, so rf shielding in the wx station is necessary.

I would like to hear from any hams that have a system that they intensely like (or dislike) and any suggestions as to how to proceed would be helpful.

Thanks for any information you can share with me on this subject. Also if there is another newsgroup that might have an input, please let me know what it is.

Your statement about tower impedance step levels that can produce 10KV pulses or more during a hit over just one section of Rohn 25G is very much on target. After learning about the elevated vertical problem the hard way for just this kind of hit, even where all the stuff WAS grounded, that is the single reason I abandoned the idea of the elevated radial system in the second large array I put up on lo band.

The step voltage here just isn't worth it for the work saved in less radials down at ground level....

Darned nicely written article.

Hello Wendell,
You might try to find someone will to part with the Heathkit Weather
station, model # ida 5001-1. I build mine in 1989 for a kit and it is
still going strong. I have even seen it in EOCC operation vehicles. It
is a very accurate and reliable system. Has a 4 x 10 incnh back lit LCD
display. Features wind direction, speed both high and low, date and
time, pressure High and low temp high and low, humidity, rain amounts
and an user selectable alert system. It does have a rs232 port option,
though like an idiot I did not install it. While Heathkit is out the kit
business, as of a year ago, they still had a few kits left. The last
number I had for them was 616 925-4924 or 616 925 6000. In kit form I
paid a little over$600. new build and tested it was onver $1200. U might
find a reasonal unit out here some place.
Good Luck

>
> Well, thanks in advance for any assistance,
> Dave (KA1JWM)

Dave: One common (read VERY INCREDIBLY COMMON) mistake is that any junk you hear on your receiver which you cannot explain must be intermod. Well, it isn't. In my article in Mobile Radio Technology in 1995, I explain the differences between receiver overload, images, and intermodulation. You my friend, probably have an image problem. No, don't run out and hire a publicist; just look at some of the frequencies being used nearby and start writing them down. 1 1/2 miles is frankly too far away to have any real intermodulation problems. I have designed transmitter sites with 12+ high power transmitters/repeaters within close proximity of each other on the same tower, and THEN you really have to use some skill and thought before turning things on. Antenna distances, operating frequencies, and power output all are contributors to intermod. By separating two 50 Watt base stations with gain antennas by only 50 vertical feet I was able to end a problem which had plagued the user terribly for years. They claimed they were being interfered with by outside users when in fact they were interfering with themselves. 1 1/2 miles is a little too far then unless the transmitters are honking out 1 KW or more...

Now, image rejection in a little IC-2000 might be a bigger problem. Image creation occurs when you have a strong signal which presents an image, often mathmatically offset by the receiver's IF frequency. I

believe your widebanded ICOM uses a 21.4 MHz IF. Therefore, if you were listening on say 147.00 and someone nearby was transmitting on 168.40, you probably will hear them or at least a signal artifact. One problem here in the Raleigh area involved folks using the 146.64 repeater, and everryone with lousy Bearcat scanners with 21.4 MHz IFs were getting trashed by low flying planes calling into the approach tower at RDU at an offset of 21.45 MHz below the repeater's transmitter frequency. The FM demodulators in the scanners had a hard time with an off-frequency AM signal, but the result was the same - trash in the receiver. This is what can happen!

What can you do about it? Nothing, really. Move or buy a better radio with significantly better image rejection specs (gee, notice how ICOM never lists some of these specs in their ads???). You might also try not using a gain antenna since this will only 'amplify' the problem you now have.

I tried to get QST to publish my already-published article since I thought it would be very helpful, but they disagreed. I also told them I really took exception to the fact they let ICOM brag about "intermod rejection"...

Todd Ellis, N2XL

Right now, the government is forcing RF theory on anyone who wants to get into ham radio, even if all they want is to talk on the radio with other stations with modes that have nothing to do with the theory they are forced to learn ... it is backward. However, the techno-crats bitch and whine at the thought that someone non-technical might actually get into ham radio and promote the use of a mode that has absolutely nothing to do with technologically-advanced modes and yet at the same time still have fun doing it. Amateur radio isn't about having fun, dammit all! We are trying to use these fora to raise the consciousness of those who don't particularly care one way or the other, so that they begin to see just how important it is to abolish theory testing and drag ham radio, kicking and screaming into the 21st Century before it's too late and there is no ham radio any more.

Absolutely 100% correct Carl. I couldn't agree with you more.

> argue with fact Curtis.

Some of this is probably indeed fact. I don't evaluate the technical compliance of radio or TV stations. But if "many broadcast stations" are out of compliance it sounds like the FCC has an monitoring/enforcement problem. But I will agree that not requiring indivduals to be licensed (or in some way setting a standard) may contribute to the problem. But let's face it, it would not matter if someone was licensed or not if there was no threat of enforcement action. There are licensed hams that knowingly violate technical standards but there is no fear of enforcement of minor stuff.

So I am not arguing with your facts but I would question where you lie the blame.

> Where in Part 73 do you see any mention of a "de facto" knowledge
> standard for broadcasting.

There is no mention of "de facto" standards in part 73. If the requirements were actaully there in the regs I wouldn't have used that term.

I think you are unwittingly supporting my point of view... I said that a broadcast station would find it difficult to comply with technical standards if they didn't have competent personnel. You are supporting that view when you say that many broadcast stations are out of compliance and blame it on incompetent personnel. In other words - if you want to be compliant, it "requires" qualified people.

Source: Webster's New World Dictionary
HEY CARL--look a dictionary for your new world order of Amateur
Radio for pay

ass - noun any of a genus (Equus) of animals resembling horses but
having longer ears and a shorter mane. A silly or stupid person

hole - noun a hollow or hollowed out plave, cavity

asshole - noun see QRZ database under WA6VSE

egoistic - adjective self centered or selfish egotisical, conceited
see QRZ database under WA6VSE

opinion - noun a belief not based on absolute certainty or positive
knowledge but on what seems true, valid or probable to one's own mind

opinionated - adjective holding unreasonably or obstinately to one's own
opinion see QRZ database under WA6VSE

intellect - noun the ability to reason or understand or to perceive
relationships, differences, etc. DO NOT see QRZ database under WA6VSE

singleminded - adjective with only one aim or purpose see QRZ database
under WA6VSE

postulate - to assume without proof to be true, real or necessary,
especially as a basis for argument see QRZ database under WA6VSE

more to follow

Hey CARL..you started this 9 months ago by insulting me for asking a
question. DEAL WITH THE CONSEQUENCES OF YOUR FOOLISHNESS.

<Thread history of military interference to hams deleted>

Our news feed missed the first parts of this thread, so I don't know the frequencies involved.

I must point out, however, that Amateur Radio shares many of the UHF and higher bands with the military and that our status is secondary in most (or all) of these cases.

We need to be very careful about trying to kick the military off of "our" frequencies because they probably have more right to be there than we do.

Let me borrow a phrase from you, Squiggie. 'Bullshit'. How stupid do you think the readers of RRAP are ? How many times have you said you have been licensed for 20+ years ? Long time, right ? In those 20+ years, what have YOU done 'for the future of ham radio by building, experimenting, and improving our technology'. Nuttin. Nada. Zip. Zero. But now you want us to believe that if you talk us into letting you onto HF without taking a code test, you will all of a sudden get off your butt and start doing things 'for the future of ham radio by building, experimenting, and improving our technology' ? In a pigs eye. If we let you on HF tommorrow, you'd be on 20 meter SSB yaking with Lenny. You aren't looking for 'instant gratification', you are grasping for reasons to justify something for nothing. HF access won't make you a better person, so write that idea off the list.

Maybe there isn't 'lots' of bandwidth in thier neighborhood. We have the same problem here with Japanese stations who get down near the bottom of 40 meters, but it's perfectly understandable because their phone band stops at 7.100 (like ours in Guam does) and 40 meters is VERY crowded in Japan. Biggest problem we have on 40 here in this part of the world is not with hams, it's with Chinese, Indonesian, and Philippine slims who have made 40 meters part of thier GMRS bands.

Paul:

I believe that you misunderstood why I explained to Thomas that he may operate only between 144 and 146 MHz, even when he is operating under an FCC Reciprocal Permit in ITU Regions 2 or 3. Thomas's restriction in this regards is in no way related to the reduced privileges of the holder of an FCC license in ITU Region 1.

As you agree, Thomas must operate (when in Florida) within the US regulations for an Extra Class Licensee located in ITU Region 2 and also within the privileges of his home license. But you must note that the home license issued to Thomas by the German licensing authority restricts his operation to the 144 to 146 MHz in all events; it was drafted with only ITU Region 1 operation in mind. Germany has no territories in Region 2 and no there are no greater privileges granted for German licensees operating in ITU Region 2.

After this news posting I exchanged further email correspondence with Thomas, and I did suggest to him that I believed his best course of action was to investigate taking VE administered tests for a US license of his own, as this would give him far better privileges than the reciprocal permit does.

>That is a silly argument. The new technologies can be developed above
>30 MHz. As such, you already have a no-code license. No more is needed

>for research into new technologies/techniques.

Actually, I have a coded license, not a no-code license ... and many of the things I want to do are HF-oriented and require access to the HF bands with their unique progagation characteristics and impairments ... the VHF channel will NOT do for testing purposes ...

>
>I haven't seen a flood of new blood doing research. All I have seen is a >bunch of no-code Hams who use 2 meters like the CB band.

Many of the more technical folks that I work with still feel seriously disinclined to be looked down upon as "second class citizens" by folks who don't know nearly as much about radio as they do ... particularly if the ONLY reason is that they choose not to go beep ...

3287. Ant configuration for rocketry uplink

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-12 00:00:00 UTC
From: marku <marku@netins.net>
Message-ID: <58nsfn$m67@insosf1.netins.net>
Source record: 210336

To anyone willing to help,
I need to be able to send a digital command signal to a high power rocket that will reach an altitude of 10,000 to 15,000 ft. I plan to use a rat shack wireless paging system to do this. It operates at 27.225 MHz producing 6.5 W I need to know what anttenna configuration will allow me to be near the launch site and have the rocket some what overhead and allow the signal to reach the reciever to deploye the recovery system. The only other requirements is portablity and cost. Any help with this would be appreciated.

RoDger Vadim? I thought it was Roger Vadim. As in husband of Jane Fonda and whatever other pulchritudinous beauties of his time. I AM impressed.

Answer? No, I don't know any of them, except at the bottom, where I see my own personal RoDger clone, who I hope is happy about having what the world thinks is the default spelling for the monicker. Must be a European kind of thing.

You know, Mark, you have a very complete sense of informational duty that I hope isn't being wasted in some rudimentary kind of employment when so many opportunities exist for people of your ability. Aren't there still some cabinet openings available?

Anyway, thanks for the RoDger update. I'm going to write to these people and see how they feel about their parent's naming capabilities. I know I wish my parents had gone a safer route.

Do people ever spell your name Marque?

Happy Holidays,

You're right, Jim ... the tests are a joke ...

>If the exam doesn't verify that one knows the material, what good is it?

It's a joke ... like now ...

>I would have expected more difficulty at the highest level of written exam.

What? You actually think that the "beepers, yackers, and gamers" should
actually have to *know something* about radio??? What a quaint idea!
(not)

>In a theoretical sense, I don't disagree. But, if 5 wpm is the best that
>one can do, then don't count on working too many others. Many of us OTs
>don't mind slowing down to help a Novice, but a General or above with a slow
>fist is often shunned.

Not to worry ... most of us would NEVER think of trying to work you on
CW ... some other mode, fine ... we're NOT unsociable ... just don't
like the code ...

>Yeah, when I got into the game, there were four classes: Novice, Technician,
>General and Extra. Novice expired in one year. Others were renewable.
>The Extra required two or more years as a General and was mostly honorary,
>as it conveyed no extra privileges.

License classes should not (need not) exist for the ego gratification of
the holder ... licenses are simply a grant of privledges, based on the
applicant's proof that the minimum necessary requirements have been met.

Try reading the threads ... the ITU has been mentioned numberous times ...
we can satisfy the ITU with a 1 word per day test ... but the real goal
is to get the ITU treaties revised at the updoing WARCs ...

>should be required if you plan to use it or not. No, learning the code
>isn't easy, but if something is important to you, you will expend the
>effort.

This is forcing *your* idea of a "work ethic" on everyone ... many of us have worked hard to learn *far* more theory than the average ham will ever learn ... we like the radio science that's *supposed* to be the major part of ham *radio* ... the "yackers" and "gamers" don't understand what ham radio was intended for when it was established.

>Learning theory to build a transmitter wasn't easy either, not
>copy ARRL plans but to build one with existing componants, but I wanted
>to do it, so I learned. Learning organic chemistry wasn't easy either,
>but the degree was important, so I learned it, haven't used it, but I
>learned it. My mother made me take typing, it was a major battle, I
>was never going to do my own typing, why should I learn to do that.

Most forms of "busy work" are simply wasted effort ... those who are forced to do something useless just "because" usually end up hating the thing even more passionately ...

The *radio* part of ham *radio* is mandatory, however ... nothing in the *purpose* of ham radio mandates the knowledge or use of CW ... only a part in the licensing requirments section ... however, the *purpose* of ham radio is DEPENDENT on self-education in the radio part ...

>It took me over 50 hours of concentrated effort to pass the 13 wpm, I
>thought I was one with a medical condition I had so much trouble, but
>then I got serious. I had been doing the 20 minutes a day for 6
>months, but didn't take. An hour before work, lunch, and hour or two
>after dinner for 2 weeks did the trick, I passed the 13 wpm and got the
>Advance license.

You had it EASY ... many people can't come close to getting it that easily ... but those of you who *do* find it "easy" don't understand that.

>If it is important to you to get the license then quit complaining and
>learn the code, you can if you want to, quit fighting it and as Nike
>says just do it.

Not necessarily so ... again, just because it was (relatively) easy for you, doesn't mean it's like that for everyone ... and it's NOT important in today's world ...

>The more you have to work for something the more you
>will value it.

NO, the more I'm forced to swallow something that tastes bad, the more I hate it ... many people are that way ... we're not the "it's always been that way, so it *must* always be that way" sort of folks who just passively accept being crapped on ...

>I don't care if CW is outdated, I don't care if
>you will never use it, I don't care what your excuse is, I want people
>on the air that wanted a license enough to WORK for it. Many argue they
>will work on learning more technical issues and want a more technical
>test, I agree, however look at the background of these people, they
>already know the technical part, that is why they want it, they don't
>want to have to learn anything else different, or remotely challenging
>to get the license.

The theory is the MOST important part of ham radio, followed by the operating practice part (which can be absorbed by osmosis in about a day of hanging around with someone whose behavior is acceptable) ... beyond that it's just fraternity hazing ...

>I think hams should be required to retake the test
>every 5 years, both code and theory, after all the theory is constantly
>changing, and they should remember how much they want that license to
>continously work for it.

I have no problem with retesting on theory ... in fact, I've advocated the idea many times ... however, since code testing should be abolished, I cannot support any form of code testing.

>If the FCC decides I need to learn to program a PAL to get my license,
>guess what, I will learn how to program a PAL,

That would be far more relevant to today's technology than CW ...

>if they want me to learn
>to print backwards, I will do that, the license is important to me, and
>I will do whatever it takes to get the license. Quit trying to get it
>free, and work for it, you will be more proud of it, and treat the
>service with some respect.

First, I respect the service ... I'm trying to save it from the backward-thinking folks who insist on staying in the 1940s instead of keeping up with the times ...

Second ... you sound like the kind of guy who used to get pushed around by the class bully all the time ... "whatever you say, boss ..." Not all of us are so passive as to take anything that's dished out ... some of us are trying to change the system for the better ...

Yea, right ... REALLY realistic ... the advanced alien culture that came
here to destroy us all and could jam every other form of communications
was defeated by some brass pounders ... jeezzzz ... give me a freaking
break ...

>If a nuclear device ever went off, the
>EMP would take out all the computers and much of the radio gear.

That is a pouplar misconception ... properly designed, reasonably
protected equipment stands a pretty good chance of surviving an EMP
event ... any gear kept in standby (not connected to AC lines or
antennae) stands an even better chance ...

>A battery and some wire may be your only transmitter.

Excuse me ... are you talking 12V spark here or what????

>Reqiring all Hams to at least have a basic idea of code is a
>great resource in such an emergency.

If CW were such a great resource, the military, Coast Guard, MARS, the
worldwide maritime industry, and all the other dozens of services who
used to use Morse would *still* use Morse ... they don't ... they've
dropped it like a hot rock in favor of more modern, efficient modes.

These pro-code arguments are simply a bunch of emotional drivel with NO
basis in fact or reality ... wake up ... Morse code IS (virtually) dead
.. ONLY in ham radio (where it's on artificial life support) is it even
breathing ...

>I was on the receiving end of many a distress and lessor priority calls
>while working as a USCG CW op. The distress system that has replaced
>CW is plagued with problems, including countless false distress calls.

If you're talking about false/accidental EPRIB activations, that's a problem, but better signal processing algorithms and the new 406 EPIRB's *digitally* modulated signal with embedded ID not only minimizes the effects of any false alarms, but also significantly improves acuracy fo the fix and, even more importantly, allows the satellites to "store and forward" the distress signal and fix information, allowing full coverage of the world's oceans, not just in the areas where there is mutual visibility between a vessel in distress and a shore-based satellite earth station (the previous system left considerable areas of the world's oceans without coverage) ...

BOTTOM LINE: the new digital system is *worlds* better than anything previously available ... and it doesn't use CW at all ...

>But the new system is easier on the budget (computers rather than
>manpower). Keep that in mind: CW was replaced due to government down-
>sizing.

Translation: The new system is easier on the budget BECAUSE IT WORKS BETTER AND MORE EFFICIENTLY ...

>The person who made the decision to drop MARS CW happens to be a
>no-code tech. Guess he felt a bit embarrassed not being able to
>copy MARS traffic, so instead of learning the code, he used his
>power to forbid its use.

No ... guess he accepts the technological reality of today'w world and decided to spare MARS any further embarrasment in the world's communications circles ...

I don't disagree with your choice to practice the mode ... and I've said over and over "beep all you want ... just don't insist on forcing everyone to beep, just because you want to ..."

I question the PR benefit of a CW position vs. the negative PR of showing such backward practices in what's supposed to be a technically progressive activity ... and even just in light of the level of technology that's commonplace to the average Joe today ... nationwide paging, cellphones, PCS, even satellite communications ... even though they may not know how all that stuff works, they're clearly smart enough to realize the benefits and that it's FAR more advanced than Morse code .. why can't so many hams realize that????

>could such a ridiculous habit proliferate like it has?

Maybe the operator is emotionally close to his radio and really does
mean "we"? Or, maybe the operator has someone else in the shack/car and
really does mean "we"?

Does it really matter? If so, don't enter into a QSO with someone
who speaks in the second person.

But note that many radio broadcast talk show hosts also speak in the
second person, so this habit isn't confined to just the ham bands.

>Who is forcing anything on anyone? Who is "you" that you speak of?
>Were you coerced into the hobby? Someone hold a gun to your head? If
>it is no fun for you, you need to look for another pasttime my friend.

Right now, the government is forcing the code on anyone who wants to get into ham radio, even if all they want is to experiment with developing advanced modes that have nothing to do with the code ... it is backward. However, the pro-coders bitch and whine at the thought that someone technical might actually get into ham radio and promote the use of things that are far more efficient than their nostalgia mode of choice. We are trying to use these fora to raise the consciousness of those who don't particularly care one way or the other, so that they begin to see just how important it is to abolish code testing and drag ham radio, kicking and screaming into the 21st Century before it's too late and there is no ham radio any more.

>Just who are all of you code abolitionists preaching to/bitching at
>anyway?

See above ...

>Better yet, what would you have ME and other coded licensees
>do about it? Your answer should be reasonable and appropriate.
>Anything else would be emotional drivel.

Simply put, please support the modernization of ham radio, before we lose everything due to our extreme backwardness relative to the rest of the communications world ...

>No one in here, (deja vu) has any authority to change the rules as
>they are so why does this thread keep up?

Because that's what USENET is for ... particularly rec.radio.amateur.policy, which ws established PRIMARILY to host this debate ... OK it slops over into .misc quite a bit at times ... but policy seems to not be as widely carried as .misc ... live with it ... or, if you can't live with it, killfile it ... not hard to do ...

>>The code requirement will be abolished soon. Either the ARRL and the FCC
>>will get with the times, or else it will be challenged in court.
>
>If only roughly 1/5th of the hams are not coded, at this time, what

>radio." Wah wah wah...you get the point. That attitude is going to
>be the demise of ham radio and not really the code, no-code debate.
>When something is obtained for nothing, like this, it will probably be
>taken for granted. The 27 MHz band-case in point. That is where you
>need to go if you are looking for instant gratification.

Nobody is looking for instant gratification ... we want to work for the
future of ham radio by building, experimenting, and improving our
technology ... by meeting the purposes and goals that ham radio is
supposed to be about ...

Morse code /= ham radio ...

radio technology, experimentation, learning, self-improvement = ham
radio.

Au contrair ... most of us no-code-test advocates are technical types
who freely state that we think the theory tests are a damned joke ...
and we *do* want to design and build ... many of us do it
provfessionally and want to bring those skills to the ARS ... but lack
of HF access is a barrier to testing things for that environment ... and
many of the engineers I have worked with over my 25+year career simply
refuse to stick their noses up the backside of some "higher class"
beeper who knows less than they do and still looks down on them because
they don't beep ...

>BTW, it also contradicts Carl Stevenson's harping on about "CB'ers who
>beep". I find it quite ironic that the very people he supports are the
>ones who, in my experience, are most like CB'ers.

Au contrair ... I've referred many times to the dozens and dozens of
highly competent RF professionals I've worked with over the years who
have not become hams PURELY because of the code requirment ...

AND I have also voiced my distaste for those who merely "yack and beep"
like "CBers with an attitude" ...

I lived and operated for 5 years on a 42' Tayana cutter-rigged sailboat while crusing from SoCal to Florida via Mexico, Central America, Panama Canal, Western Carribean, (more) Mexico, to Florida ...

Make sure you have two solid jumpers around any "drive-saver" coupling with a rubber shock plate ... also tie the keel, all metal tankage, engine, etc. and antenna tuner/radio together with LOTS of 4" wide heavy copper foil tape ... if you can get a good bond to a metal keel, you'll get a huge improvement in "grounding" via capacitive couling to the ocean ...

Good luck cruising ... I've "swallowed the anchor" for a few years to finish building retirement, then it's buy another boat and sail off into the sunset again ...

>73, Jim KH2D

Of course, Jim ... because all they see are another bunch of "yackers"
with a bunch of "secret codes" like QRM, QTH?, etc ... HELL, YES it's
just like CB ... only with an attitude ...

What the mall station *should* be showing is the use of advanced modes
(surfing the web via a wireless T-1 link would get some "wow, that's
NEAT!!!" attention ... instead of "Ho, hum ... another CBer ... yea, OK,
10-4 good buddy ... now can I go buy my gormet coffee and get the hell
out of here?"

My point is, not only is ham radio so technologically backward (for the
most part) as to look *just like* CB to the average citizen, but the
average ham has no idea of how to improve the image and the appeal ...
because he's just a "yacker, gamer, beeper" who doesn't know squat about
the REAL current state of the art in technology ...

This is what we have to change to "gain market share" in the public
appeal sense and also to survive into the next century ...

If I appeared to be advocating a dictatorial stance by one person I
appolgize ... that was *not* my point ...

>Carl seems to
>think that it's OK because the president is acting in the club's best interest.

I was not so much supporting the president's action (if it was, in fact,
a one-man, dictatorial decision that goes against the majority view) as
I was saying that leaving a CW station out of a public display activity
might be better in a PR sense so as not to protray ham radio as
backward.

>He thinks that a majority vote on the matter might result in something that
>wouldn't be in the best interest of amateur radio. Be that as it may, the
>matter shouldn't be left to one person to decide.

It was not at all clear in the original "help the meanie has banned CW"
post that the majority opinion was opposed to the ban ... only that the
writer (and perhaps a few of his CW cronies) were upset at the decision.

I am NOT advocating tyranical dictatorship ... simply pointing out the
potential negative PR value of CW in a public display station ...

Couple of quick comments: operation at 27.225 with 6.5 watts output would appear to violate FCC regs for CB operation. Second, any command radio operating in the CB band is wide open to all mannner of interference which could be of some danger with rocket control.

I don't think that's necessarily true ...

> (And even if it were possible, it would dilute
> amateur strength, and that's not good at a time when amateur
> radio faces severe threats from the outside.)

The ARRL LOVES to hear people spread that fallacy ... actually, getting
representation for/by the 2/3 or more of US hams who are NOT ARRL
"members" (not to mention representation for those of us who are/have
been "members" for 20+ years without representation) would ONLY serve to
strengthen ham radio's political clout and lobbying ability on important
issues ... only on areas where the ARRL is behind the times and
non-representative would there be any "competition" in the regulatory
sense ... in many areas, the .alt.org and the ARRL would present
essentially the same views (e.g. "more, larger ham bands are good,
smaller, fewer ham bands are bad) ...

>

Can anyone tell me how to make a simple dummy load that can take a load
of about 100 watts HF?
First you get a 100 watt 50 ohm resistor. Then you get a metal box.....
It don't get no more simple than that......
73, Jim KH2D

Yeah, but that had better be a darn special resistor. Most 100 watt
resistors will have far too much inductance at HF to be a good dummy
load.

I wonder if an antenna tuner could provide enough capacitive reactance to
cancel out the inductance from the typical power wirewound? Its difficult
to get the wirewounds to resonate in a tank circuit in order to get a
feel for their inductance. (kind of a low Q inductor, they are.)

If you could offset the phase shift from the inductance, the rig should
feel just fine about working into a resistor of this type. I suppose
once the value of capacitance in determined, one could include a capacitor
in series with the resistor. You'd be stuck with a fixed test frequency
with a fixed value of capacitance though.

Any reason the load has to be a DC load?

Jim AC6XG

Hey I gotta a better idea for ya. Get a 150W light bulb, connect it
to the dummy load output on your tuner and your all set. It might
not come out to exactly a 50 ohm resistance, but who cares. It will
keep your rig dry while your tuneing up.

Roger: go read my follow-up posting to your query. There are about 30 radio clubs in the greater Philadelphia area. One is at Penn. If you have 2-meter access, ask around on 146.76 (repeater output; transmit on 146.16). This is the machine with regional coverage. Try also repeaters with outputs on 147.03, 147.06, 147.00, 145.31, 146.88, 146.82. Some clubs do not operate repeaters. The Penn club has an extensive linking system that covers a good piece of Pennsylvania.

I figured this topic would degenerate into a "no code techs are ruining ham radio" arguement...

The original post (not by me) was requesting simple circuits on roger beeps so that he could get some ideas for a repeater controller. For the ham bands.

Go back to your CW segments and stay there, people.

There are many radio clubs in Philadelphia. One is at Penn. Another is
at Temple. Another meets at the Franklin Institute. Another is a MAJOR
contest club. Several are essentially "neighborhood" clubs. Some are
regional in nature.

What is your interest? General purpose? Contest? Mobile operation? VHF?

Source record: 210370

$$$$ $50,000 for the New Year $$$$

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more.
That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted.Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM.
By the end of the fourth week, I had recieved nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1-Aaron McDaniel
2014 Powell Dr.
ElCajon, Ca 92020

2-Faroon Khan
12343 77A Avenue
Surrey, BC V3W2W9

3-Hoffman Eric
3150 Riviere-Cachee
Boisbriand, PQ
Canada
J7H 1A3

4-Stuart Koch
Connolly Hall Box C115
501 E. St. Joseph
Rapid City, SD 57701-3995

5-Karen Lundgren
3889 Kencrest Ave.
Halifax, NS
Canada
B3K 3L4

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off

the list.And that's only if everyone down the line makes only 250 postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through and repost this article everywhere you can think of. The more postings you make, the more cash ends up in your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it works. There are millions of people surfing the net every day, all day, all over the world. And 100,000 new people get on the net every day. You know that, you've seen the stories in the paper. So, my friend, read and follow the simple instructions and play fair. Thats the key, and thats all there is to it. Print this out right now so you can refer back to this article easily. Try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

Just wait until your in an emergency situation (like I was several
years ago) where I had to get a message out and my mic on my fancy hf
rig was broke and all I had was my 'out-dated CW' and see how you deal
with it.
If it wasn't for my CW, an 8 year old boy would have died.

I assume that you don't mean it that way ... but the above could be
considered to sound a little condesending ...

You snipped away a lot of the context - I was just pointing out that
there
is more "magic" (as you said) to ham radio than just techo-wizadry.
Different
people can experience it in different ways, and one of them might just
be
homebrew, another might be DX, another might be sitting with a six-pack
yacking away on the local repeater, or even just using ham radio as a
rather poor substitute for the internet.

> I want to see some really cool stuff. That's what'll jumpstart this

> ham radio as a medium where they can do things that they can't do
> otherwise.

Well, you are welcome to whatever turns you on.
I too like toys, but HDTV would just be buying off the shelf equipment
and plumbing it together. So you produce an HDTV station - well ... like
WOW !
Now what ...

Current virtual reality systems are bandwidth limited with fiber optic
links.
Wanting anything other than a pale imitation in available bandwidth is
probably
wishful thinking.

I have no objections at all to you doing it so long as you don't insist
this is the new CW, this is what ham radio is all about, and the rest of
us low tech cabbage growers just clear off the air to make room for your

HDTV station ....

Whatever brings people into the hobby is fine.
But is there honestly any reason why the sorts of things you are talking about couldn't be done with CB or GRMS or whatever ? The radio component seems
to be almost incidental.

Wouldn't off the shelf, type accepted black boxes work fine for what you need ?

Philip

Be certain you understand the levels before you connect your Kenwood alc
to a linear alc line. If they are not compatible, you will damage your
transceiver.

: about the "cost" of QST???

Right, Carl, but someone has to pay the piper. As you say, such magazines target likely buyers. I'm getting a few trade journals on that basis, too. But the advertisers have to subsidize the cost of publication, so what would the equivalent rate of a subscription be? [advertising revenue / subscribers]

That is truer than you think. The exam pool for a pilot's license is fully available just as are the amateur radio questions. It is possible to memorize every possible question and answer. Of course, the written exam alone is but a small part of a pilot's training - it seemed to me to almost be an after thought where it is the only exam given for a ham radio license.

>
>Split ALL licenses in half. Written and CW. Have 2 ladders.

Just so I add my two cents worth. Up here in the Great Northern Waste (also known as Canada), this is exactly the system. There are 6 different privilege levels:

Basic, no code
Advanced, no code
Basic, 5 wpm
Advanced, 5 wpm
Basic, 12 wpm
Advanced, 12 wpm

Basic gives you phone/digital/whatever operation on 50 MHz and up., up to 250W (IIRC). Advanced gives 1 kW, and the ability to build things (and some other stuff that's irrelevant here). 5 wpm gives access to 160 and 80 m. 12 wpm gives access to the rest of the HF bands.

And the system works. Although, I must say, there is some concern about the lack of interest in code. IIRC, only something like 25% of new licencees take the CW test. The rest of us are waiting until '99 <g>.

When one speaks of CW (Continuous Waves as opposed to Damped Waves)
they are speaking of a 1920 invention, Carl. How one decides to
impose intelligence upon CW (in our case, Morse code) is entirely
a different story.

But really, it's age is irrelevant. Typing on a keyboard is pretty old
stuff, and communicating by voice is millions of years old; the older,
proven things will be with us for a long, long time.

It says nothing, just like you Carl. There are many trade magazines,
subsidized by the industries they represent, by the advertisers that pay
for a particular segment of the market. And it was free to a select few,
therefore, the advertising dollars were higher. Sta in the elecytronic
field where at least you know what you talk about. For you to venture
outside into the marketing area perpetuates the notion that you are an
opiniated fool.

> I was trying to get accross that there is a "magic" to ionospheric
> long range contacts

Exactly. I'm a software developer, amateur recording engineer, and an internet junkie. I love gadgets and pushing the envelope with my chosen realms of technology. I have written software to interface my Kenwood radio with my Mac, and I whipped up a quick logging app, but that's as far as my computer shares the bed with my radio.

What fascinated me as a 13 yr. old still gives me a thrill now, and that's a weak signal on a dead-quiet band answering my call. CW epitomizes the feeling because it is derived from romantic, rather than technical, ideals. It is passe as far as technology is concerned, but I still stand in my backyard and wonder "How in the world do those signals from the Pacific and Africa reach that little wire up there between the trees?!" It doesn't matter that I understand the fundamentals of propagation, it's like watching a 747 take off. You "understand" it, but it's still freaking incredible!

So despite an affinity for things high-tech, it is the decidely low-tech things about shortwave radio that embody the "magic" of it. Laugh if you will! Thousands of us feel the same way.

> P.S.: Why not be bold , and use my ENTIRE statement?

I wasn't trying to obfuscate anything. I just hate scrolling through reams of quoted posts to get to the (typically) one or two pithy comments at the end. So I try not to do that myself.

I really don't have any quarrel with you, so let's not drag this on. Maybe I'm the one who's disillusioned into thinking that ham radio is not *really* in danger. Be assured that, if I felt it truly was, I would be on the SAME side as you, Dave. And I even have paranoid fantasies of being stopped by a State Trooper on my evening commute who says "Excuse me sir, but what kind of radio is that in your truck?" I then proudly whip out my FCC-approved U.S. Amateur Radio Operator's license (Extra Class), which he is thoroughly unimpressed with, and then he takes me in and confiscates my radio (Icom 706). I am then forced to sue the State Police for possession of my rightfully owned equipment, which by that time has disappeared somewhere in the bureaucratic maze and probably lies in fragments in a closet somewhere.

So I'm not totally naive, either.

Now, now. You should know better than to taunt the Net Nazis (TM) :-)

Well, if someone is actually thinking about creating a repeater
controller,
rather than picking up one of the many existing clones, I have some
unsolicited ideas for that person to think about.

These ideas are based upon having used repeaters in various parts of the
world,
and are an amalgam of ideas from all of them.

Starting with the biggest couple of annoyances on US repeaters:

* When the squelch opens, and when audio is detected,
start a two or three second timer, if audio stops within that period
drop the Tx as soon as the squelch closes. Two or three seconds of
speech
is required before the repeater "latches on". This stops ker-plunkers
dead in their tracks.

* Upon squelch close, do not fire off a "roger beep" imediately, wait
two or three seconds, beep, and *reset timers*, wait another three or
four seconds before shutting down the TX.
This gives a pause for "breakers" to get a call in, and allows the
conversation to pick up imediately after the beep - without having to
wait for the TX to drop out (I hate that !).

* Upon overrun (someone talks too long), take the opportunity to
do station ID (and reset ID timer). In countries using tone-burst
access, there is sometimes an attempt to listen for a tone, and
re-open
the audio - this allows somone to open the repeater for the current
user,
so that we don't all have to listen to him repeat the sam thing over
again, dropping carrier every 10 seconds to ensure he isn't cut off

again ...
In the US, you could probably achieve the same result by looking for
a
hetrodyne if someone tries to open the repeater for him.

* For station ID: if the repeater is in use, use low level CW ID
superimposed
on the audio - this allows conversation to continue, but is still
readable
by anyone that wants to know. If no conversation is in progress, use
voice ID
(not everyone reads CW).

* If the repeater is to be used for emergency communications, have an
emergency communications mode: use a different "roger beep", keep the
Tx
on permanently (if your repeater is rated to support that), this
allows
emergency users to know imediately if they are in a dead spot (can't
hear the
repeater? - move!).

* If you have standby power sources, use a different "roger beep" when
it is active, and change the audio station ID to add a warning -
hopefully
this prevents rag-chewing, and also serves to notify concerned
parties
to take action.

One day, I will get around to building one of these controllers
myself...

Philip

I believe that it takes only 10 signatures to get on the ballot and run for division director. Then you'll be given an equal amount of space on the ballot to state your platform against your challenger(s). What could be easier. What sort of control on the system will prevent you from being elected? It's the requirement that one have access to a lot of money (like running for national government office). So what is it?

> >>>just come on .misc or .policy and complain, run for office yourself and

> that, you're not being realistic, and that's uncharacteristic for you
> from my previous experience with your posts ...

Who's being unrealistic here? I've outlined what I believe to be very simple requirements needed to run for office that helps set all League policy.
I'm sure that you can get the required number of signatures to run in your area. I'm equally sure that a number of like-minded associates can do the same in their divisions. This group could "take over" the ARRL for a fraction of the effort it would take to try and create a new organization.

> The key is the 2/3 or more of hams who are NOT league members and those
> "members" who are really only "subscribers to QST" ... that's where the
> real political power in ham radio lies and we need to harness it ...

The big question is, how many of those Hams (ARRL members or not) are really active Hams? How many are dead? How many have a license but don't have a radio or haven't turned on their radio in years? I'd bet that a pretty good number of those 2/3rd's are not active Amateurs at all. Of course neither I nor anyone else has some real numbers to back up anyone's claims to that effect.

> If an organization can be structured to be more responsive and
> representative and provide a source of news, information, and political
> input, I think the currently UNrepresented 2/3+ (majority) of US hams
> would jump on the bandwagon ...

I don't think that would be the case at all. I'm not saying that there might not be more members of the ARRL if they changed their tune but I think we disagree on why more people do not join the ARRL. Even the much mentioned on-line survey that has posted about showed that the number one reason for not joining the ARRL was price, not the politics of the ARRL (though that was second).

Amateur Radio is not alone in facing the new demagraphics. Specifically people today are much less likely to join or be a member of anything than they used to in the past. Almost every organization is facing a similar problem. So I don't think that the ARRL can realistically do much to double the number of members.

Robert, you have to understand Carl. He's not a doer. He's a talker. He's you're typical Dilbert type manager. He's a brains??? man. He's a monday morning quarterback, an armchair general. Over a year ago he advocated the start of another lobbying organization. Even offered 100 bucks (whoopdee doo) to get it started. Have you heard anything about this new organization?? Nope..just Carl blowing smoke up everyone's drawers. He professes he needs HF access for all these great technologies that will save the ARS, yet forgets that for the past 20 years, he's had HF access. He saya that passing an upgrade test is NO SWEAT, yet never has, but still he pisses and moans about needing to be on HF.

He cries about the ARRL not representing HIM, yet when elections come around he proudly boasts, I DON"T VOTE. He probably has a bumper sticker on his boat the proclaims..DON'T BLAME ME, I DIDN'T EVEN VOTE.

If you want to see a do'er, look to Bill (K2UNK). Bill and I don't see eye to eye on everything (he is shorter than me), but Bill is a do'er. He's hands on and get involved. I'd put more faith in 1 Bill, than dozens of crybabys like either TweedleDumb or TweedleDumber (Carl and Len, or Len and Carl).

Don't waste time on Carl. Invest it wisely. Look for someone other than an old geezer Carl/Len type who can make a difference.

Besides, Carl wants the ATS to dissappear. His buzz words..increased market share. Internet access on the air all point ot his true agenda,

a play for pay program, sponsered by his engineering types and the commercial communications entities they represent.

Enuf for now. Remember Carl, there are eyes watching you wherever you go......BOOOO made you look BRUHAHAHAHAHA

CW is crude? How so? We're communicating here by tapping on a keyboard - that's rather crude (an 1875 invention). Communicating by voice is rather crude, too - been doing that for millions of years. On the air hams probably talk at a rate of around 100wpm, type at about 50wpm, and do code, on the average, around 15 to 20, but as high 50wpm. Given the usual topics we discuss on the air, I don't see any one mode as being more crude than another.

One wonders why you would immediately think of the manufacturers instead of the homebrewers? Given your (empty?) concern that not enough folks are building gear today, one would expect your worries to be centered upon the home builders - the manufactuers could and would adapt to type-acceptance (and reward us with higher prices in return).

Mike, you should know better. The gas used is nitrogen and the heliax
is pressurized with various fittings to keep out moisture. Important
if said heliax is to carry lots of power without heating up the cable,
as is the case in broadcasting where it is used.

Turn off your pro-code kill file, Carl. We've read of CW positions
in multimode mall and Field Day stations as attracting the most
public attention time and time again. How can you ignore these
testimonials?

3354. Cross band packet on Kenwood 733??

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-12 00:00:00 UTC
From: Don Labriola <dplabriola@ccgate.dp.beckman.com>
Message-ID: <32B07B2E.7E46@ccgate.dp.beckman.com>
Source record: 210403
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Would anyone know of a setup mode or procedure to allow the Kenwood 733a to receive packet on one of the halves (UHF) and transmit on the other (VHF) via the packet connector. What I'm really doing is trying to use the packet connector to connect into an AEA radiolink controller for use as a remote, and the packet connector provides 1) a shielded audio input with PTT (the normal mic is hard to shield), 2) Audio out, and 3)Squelch detect (COR) output. I can get any two by other methods. The packet, as far as I can tell, will only direct the received audio from the side that is selected as transmit (PTT), not from the selected "control" channel.

Any suggestions or help is appreciated. (Please also E-mail - I don't always get to read all of the news groups before they go stale - our local news server tends to have a fairly short memory span!)

Gee Carl, for someone so allfired smart, you're really quite dumb. With your tech + license (20 proud proud years of underutilization) you have access to HF. To help you, that would be 10 meters. Last time I looked 10 meters was concerned part of the HF band.
Where better to take existing technology and reinvent the wheel than 10 meters. The whole world is watching Carl, start producing

Looks like you really don't know that much about amateur radio as you profess, hmmm???

The instructions for cross band repeat can be found on the Kenwood web page

http://www.kenwood.net

They dont put the instructions for cross band repeat or wireless memory
programing (to a like rig) and wireless remote control

because many of those features are not leagle in certain cournties.

Go to the web bage and look for the tech notes.

Enjoy.

I didn't say Gary had no interest in long-range communications, either.
I recognize his lack of interest in DXing. Reread the original
gentleman's statement (which I have left in this post). His point is,
given that so many people in the world use CW, it is a good idea to
require U.S. hams to know it. Implicit in his argument is the HF long
distance aspect. Hence my question.

> ...<SNIP>
>
> Please stop with the world poverty rubbish ... as I've stated before,
> even in the poorest countries of Latin America, the hams are people of
>
> ...<SNIP>

And I can tell you first hand how people in third world countries live.
While in every country there are people who can afford the most

luxurious items, the relative numbers of such people are much lower. Indeed, as I pointed out in my response (which you edited), even in other first world countries, digital equipment (and purchased radios) can be very expensive relative to their incomes, compared with this country.

It seems to me, given how often you reply with non-sequiturs and tangents, your only interest is in winning the argument. There is no point in arguing this issue with you any further as nothing will come of it. I'd rather use the time on my design and construction projects (even though I do use CW, a contradiction in your universe). Thus, I'll bow out here.

oh, yeah, right...and the "mainstream" networks wouldn't lie...
Are you REALLY that trusting of a business that is just out to make money
from you? Or are you just playing "devil's advocate"?

Let's ignore the facts for a moment, do you really think that if
something is not on the big networks it can't be true?

If you do, I suggest a little research for yourself, or at least admit
that you don't know for sure what is true, and what is not.

I'm not sure if this analogy is exactly true either. After all,
as late as 1994, CW was used to set world records for long distance
communications by amateurs on several bands. Some of the over land
records are under 1000 miles. Perhaps newer modes, with their
superior reliability, will extend these records in the near future.

All of the EME distance records are CW, which leads to the natural
question of "why?". Which mode would *you* use if you wanted
to communicate DX via EME, and why?

I would disagree that the technical knowledge requirements for broadcasting have been reduced to zero. I don't believe that a broadcast station could stay in compliance with the required technical standards without competent personnel. There is still a defacto knowledge requirement.

But licensing the professionals at a broadcast station did help the station licensees. The station owners knew that when they hired a licensed individual they were getting someone that had something at stake - The idividuals license (and "employability") was on the line if he was incompetent.

"Operator Licensing" requirements have been dropped from almost every domestic radio service (that I can think of) without much of a problem. Most international services that I can think of (aviation, marine, AMATEUR, etc.) still require operator licencing (or at least restricted permitting).

Eliminating most of these op license requirements was a "business" move by the FCC. The benefits of the FCC administering licenses for idviduals were not worth the hassle.

Refering back to the requirements of part 73 (the broadcast business), there is no requirement for licensed personnel at an "international braodcast station". However the rules specifically require an applicant for an international broadcast station license to show legal, technical, and financial capability to operate the station. The applicant must also show that the technical operation of the station will be conducted by qualified persons.

> The potential for interference with multi-tower arrays is significant

> the licensing requirement. The burden for ensuring compliance now rests
> squarely on the shoulders of the non-technical station owner.

That is not a problem. They just need to be careful who they hire to work on thier stuff. The individual's job should be on the line as well - licensed or not.

> Again, I'm not advocating the elimination of either the written or Morse
> sections of the amateur exam. To the contrary, I have only been trying
> to
> relate the absolute necessity of a written exam to that of CW testing.

I separate the issues of the written exams and code testing. I don't they should be related. Code requirements should be based on the necessity of it use in the service (code tests do not evaluate technical competence). Morse code may still be necessary in the amateur service, which is why I do not support its complete elimination as a testing requirement. But it not required so much that we need to have code proficiency tied to the incentive licensing structure.

"Theory" testing is needed since amateurs are permitted to do a lot of unsupervised technical work and experimentation in an international service. We need to know that operators meet a minimum knowledge standard - The only practical way to do that is through written tests. I am not prepared to support any significant relaxation of the written exam standards.

Happy Holidays

>QST.

I was once (for two years) Managing and Technical Editor for a national,
BPA-audited trade magazine (mobile radio industry) with a circulation of
about 35,000 ... we had a much lower ratio of advertising to editorial
than QST, and it was FREE to "qualified subscribers" (people likely to
purchase the products of the advertisers) ... what does that say to you
about the "cost" of QST???

>: However, what it does show is that the codeless license doesn't
>: appeal to engineers, it merely appeals to a cross-section of Americana
>: that is interested in getting into amateur radio.

Correction ... it shows that the codeless license without HF (and with
the serious "second-class citizen" stigma attached to it) doesn't appeal
to a higher proportion of engineers than exist in the general population
.. it is unreasonble to expect that you'll get far more engineers than
than exist, proportionally, in society ... but you're getting far fewer
with a code test than you would without a code test ...

>
>The technical chasam between a home constructed CW/AM transmitter and
>receiver, and a comparable SSB setup is gigantic.

Where the hell did you ever get such a ridiculous idea? A quadrature modulator (phasing or Weaver) type transmitter and image-reject zero IF (direct conversion) receiver are no big deal ... a very modest increase in complexity compared to that required for CW ...

This "mythology" that Morse is simple, everything else is too complicated is VERY bad business in today's technically competitive world .. no wonder all the kids are sticking with their computers and the internet ... most of the prospective "Elmers" are too damned afraid of technology to try anything more interesting than a single transistor CW transmitter ... how sad and pathetic ...

>> Maybe part of the issue is that a good hunk of the ham radio budget seems
>> to end up in Japanese transceivers with limited bandwidth. It seems to me
>> that a radio with the ability to transmit at UHF at the legal bandwidth
>> limit could be the basis for all kinds of interesting projects. The ARRL
>> does seem weirdly obssessed with squeezing the bandwidth of voice and
>> CW down for HF band -- though I think the chances of building a gadget that
>> cleans your sinuses in terms of new and amazingness is more likely to do
>> with higher bandwidth, now lower.

The whole regulatory structure currently panders to the idea that "narrower is better" ... in *some* cases that's OK ... but it's not an absolute ... sometimes wider is better ... but we can't do that because of outdated regulations that the ARRL never wants to change ...

>You are missing the point. Digital isn't better. It only works because
>of massive redundancy, transmitting the same thing over and over, or
>transmitting the information in a form with enough redundant
>information to allow reconstruction.

That's not rally an accurate statement ... part of the reason that digital works better is because of the finite quantization ... the fact that things are either "1" or "0" and it's easier to say "that was a "1" with certainty than it is to say "that was 1.0000, rather than 1.0001" .. get the picture?

>Digital, and spread spectrum are really just brute force approaches.

Not true ... they are elegant approaches to solving specific problems.

Many things can be done easily and cheaply in signal processing terms in the digital domain that can't even begin to be done in an analog system.

For example, please send me the schematic for a filter with flat response to Fc, (virtually) perfectly linear phase to Fc, and a minimum attenuation of 100 dB/octave in the stopband, where the stopband starts at 1.1Fc ... got it? ... ooops ... now retune it ON-THE-FLY so that FC is now some different frequency ...

I made up the numbers off the top of my head ... this filter is likely impractical to realize at all in the analog world if it is at a single fixed frequency ... almost certainly impossible if it's got to be adaptive (tunable) ... in the world of digital signal procssing, it's rather trivial ... just a half a dozen or so (possibly less) lines of code to write for a programmable DSP chip ... or a few pages of VHDL code if you're going to synthesize it in gates on an ASIC ...

All it takes is a little curiosity, a little study ... to acquire some knowledge ...

>If you want instant, guaranteed connections, go play on the internet.

So reliable links and reasonable communications system performance are somehow at odds with ham radio??? Not where I come from ... where I come from, they're goals to strive for ... and one is not satisfied until they're achieved ...

>So, my recipe for rejuvenating amateur radio? Forget the techno-geek
>stuff, too expensive.

No it's not ... you're just afraid to learn about it ... a DSP chip that will do 50 MIPS (enough to do a V.34 modem in software if you're a good coder) costs less than $10 ... the possibilities are endless if you'll just give up this "simpler is better 'cause anything else is too complicated and expensive" mindset ... it's not accurate and it's very limiting ... learn to fly a bit ...

>Forget the CW requirement.

I'll buy that ... most sensible thing you've said so far, by far ...

>Instead spend time on simplifying and reducing the cost of the equipment
>needed to make *DIRECT* contact with people in strange foreign lands -

Simplifying does NOT necessarily mean significantly reducing the cost .. with VLSI and DSP tremendous capabilities can be built into very cost-effective gear with super performance and reliabiltiy ... not the crap "rice-boxes" that most hams get suckered into ...

>forget satellites, that isn't REAL amateur radio

Why not? ... are you saying that if it doesn't bounce off of the ionosphere, it's not "real" ???

>REAL amateur radio is making those contacts without making use of
>intermediate high-tech-beyond-your-means items like digital repeaters

>in space.

NO, REAL ham radio is about experimenting and inventing and discovering
better ways to communicate by learning about and improving the state of
the art in radio communications ... in today's world, that included
digital, computers, satellites, and all sorts of things.
They are not "beyond our means" ... for under $100 you can be developing
DSP code on a simple development system from TI or Analog Devices (who
interestingly enough, make DSP chips along with analog parts).
Satellites are beyond our individual means, but clearly are not beyond
our collective means ... they exist in fairly large numbers ...

Try to put aside your fears of the "complicated" and unknown ... only in
that way will you ever discover the "real" ham radio ...

>testing.

Even if an appliance operator class would be created, the operators would have to know the regulations (Part 97 in the US), safety precautions, EMC and bio-effect (ANSI/IEEE in the US) regulations. In order to understand these regulations, you have to know quite a few concepts such as frequence and bandwidh, the relationships between power, voltage, current and resistance and something about desibels and so on. Most of these concepts should be thought in the school, so it should not be hard to refresh your memory for the examination. To understand the EMC and bio-effects issues, you have to know something about antenna gains, ERP, field strengths and power densities.

So even if you treat the appliance as a black box, you still have to know something how to interface it with the external world (AC/DC power to the appliance, RF to the feedline and antenna and from the antenna to the surrounding world), otherwise you have to have type or site acceptance for the whole installation and not just the radio.

IMO, these requirements are not too much different from those that are currently required for low power entry classes (which also can use non type-accepted equipment), such as the US Novice class.

Thus, requiring type-acceptance for a certain class would not change the theory requirements very much.

Such arrangements have been used for decades on VHF and UHF.

>Any reason the load has to be a DC load?

It depends what you are using the dummy load for. If you are tunning a
transmitter and measuring spurious emissions from it, it would be very
nice to have a known load (such as 50 ohms) also on the spurious
frequencies. Also when calibrating the SWR bridge, it would be nice to
know that the harmonics would not upset the calibration due to some
impedance peaks in the dummy load at the harmonics. Response down to
DC is hardly required and if you are certain that the signal source
does not contain spurious signals, a narrow band could be used.

>station license holder's equipment is found to be operating improperly,
>the station license holder is held responsible. The same process could be
>used with amateurs - if the equipment is operated improperly, fine and/or
>revoke the license of the station license holder.

As usual, Jim's arguments are absurd ... in the PLMRS, radio is simply a
"tool" the 2-way radio in a taxi, for example ... the operator has
virtually NO control over the radio, other than PTT ... and the owner of
the fleet PAYS a PROFESSIONAL to service, adjust, and maintain the
radios. ALL of the radios are "type accepted" ... if they're not, they
are illegal to use in the PLMRS ... this, plus the "marketplace forces"
(if you don't fix my radios, right, I'll not hire you again), PLUS
technician certification by industry organizations, keeps the level of
competence reasonably decent ...

Hams, on the other hand, are allowed to build and tewak and twiddle and
do all manned of things to their radios ... there are no "marketplace
forces" and no economic incentives (the taxi company loses LOTS of money
if their radios don't work) to tend to assure compliance ... PLUS the
ARS is *supposed* to be a *technical* activity of operation,
experimentation, and self-education in radio and electronics technology.

All of these factors bode heavily in favor of the idea that the FCC is
unlikely to EVER consider dropping theory tests for ham licenses,
despite Jim Conn's desire to raise that spectre in order to generate
irrational fears in hopes of promoting his pro-code agenda.

>Licenses were retained for Aviation and Maritime Radio Services because

LID TO BE CLAMPED ON SUPERCOPS

It appears as if the American Radio Relay League may be getting ready to clamp the lid on the self-professed 'super cops' in its Official Observer and Amateur Auxiliary programs. At least that's the impression one gets from an overview of a report to the League's Executive Committee by the Ad-Hoc Committee on the Amateur Auxiliary. The report says that the time has come to revise the concept of the Regional Monitoring Station. This, to make it clear that the Amateur Auxiliary was, and still is, only authorized to deal with on-the-air monitoring for rules violations -- and nothing else!
The report in question follows very closely on the heels of action by an FCC Administrative Law Judge. Less than two months ago, Judge Joseph Chachkin took the position that evidence submitted by members of the Los Angeles Amateur Auxiliary had been improperly gathered. The defendants in the case go further. They say that the actions of the volunteers violated their civil rights.
As we have reported, in his granting a Consent Decree between the FCC, Sandra Crane N6TFO and Charles Pascal WB6CIY, Judge Chachkin did more than just criticize the methods used by members of the Los Angeles Amateur Radio Auxiliary in gathering the evidence against the two educators. Chachkin went so far as to direct that a government investigation be undertaken of the volunteers. The judge said that he ordered the probe because he wanted to be certain that the FCC itself had not been used by the investigators in some improper or possibly illegal way.
The report by the League's Ad-Hoc Committee on the Amateur Auxiliary seems to be putting distance between Newington and the Los Angeles Amateur Auxiliary. It never mentions the LA group by name, but it does say that the ARRL is very concerned about the possibility of abuses in the program.
To that end, the report says that some changes have got to be made. The Committee says that work is continuing on revising the programs reporting procedure. This, to place greater responsibility on the various Official Observer Coordinators in the field. It also intends to clarify the issue of who is liable for what. The committee is also working on revising the Amateur Auxiliary Monitoring Manual with participation of the FCC.
While the Executive Committee took no further action, this subject is bound to be a topic of discussion when the ARRL Board of Directors meet in Jacksonville Florida next month. At that

time we would not be surprised to see changes made that will make ham radio super cops unwelcome in the Official Observer program or the Leagues amateur auxiliary to the FCC.

*****
WB2OTK SERVED NOTICE OF VIOLATION

One of the hams involved in the so-called 20 meter net-mess has told the FCC that he will not accept a citation for allegedly violating part 97.101, subpart D, of the Amateur Service Rules. In a tersely worded response to an Official Notice of Violation, Richard L. Whiten Sr., WB2OTK, of Taylors, South Carolina takes issue with the assessment by FCC Kingsville Texas Engineers Thomas D. Shirley and Oliver K. Long. Shirley and Long maintain that on September the 26th, Whiten engaged in communications that willfully and maliciously interfered to other radio communications taking place on 14.314 Mhz. Based on a verbatim log of the transmissions monitored by the Kingsville office, the government says that transmissions made by Whiten at approximately 8:15 a.m. did cause objectionable interference to a QSO in progress between KA4MUJ and KA1KSV.
But in his response, Whiten alleges that it is the ongoing activities of a group on the same frequency calling itself the Better Amateur Radio Federation that deserve closer FCC scrutiny. WB2OTK alleges that the FCC is condemning anti-semitism by not taking more vigorous action against the BARF group. Whiten adds that he is free of any guilt on the interference charge and that he has nothing to hide.

*****
BURTON CONVICTED

For the third time in ten years, a former ham has been convicted of operating a transmitter without a license. Late on Monday, November 30th, a Federal District Court jury in Los Angeles announced that it had found Richard Alan Burton, the ex-WB6JAC guilty on four counts of unlicensed operation.
The Burton saga goes back to the early 1980's when the former ham lost his license for violating several of the Part 97 amateur service rules. But, as court records show, Burton refused to go off the air when he was ordered to do so by the FCC. He eventually served six months in prison and five years probation. But soon after his probation period ended, Burton was again in Federal Court. This time he was convicted on one Felony count of unlicensed operation and received another year of probation. Burton then decided that he would apply for a new ham ticket. He passed a VE administered test but soon learned that the FCC had tagged his application for an unusual public hearing. There is some speculation that the Commission was deluged with challenges to the Burton application from other members of the amateur radio community. Others say that the FCC's computer simply

flagged Burton's name and brought it to the attention of commission personnel. Whatever the reason, Burton was notified of the hearing and told to file certain documents by a specific date. When he failed to do so, the FCC terminated the proceeding and notified Burton that his application to become a ham had been turned down.
And it is while all of this was taking place last spring and summer, the FCC says Burton was again operating an unlicensed ham radio station. In September, the FCC won an indictment that alleged the former ham had been on the air at least four times in the spring and summer of 1992. Burton denied the charges, asked for a jury trial and told the Los Angeles Times that he was prepared to file suit against the FCC to get his ham ticket back.
But the jury saw things a different way. After two and a half days of testimony and about six hours of deliberation they said that Burton was guilty on all four counts. Federal Magistrate Richard Lew who heard the case will pass sentence after a probation report on Burton is completed. If Judge Lew decides to go with the maximum sentence, the former ham could face a forty thousand dollar fine and up to eight years in jail.

*****
REDUCED FINE

The FCC has reduced the amount of a monetary forfeiture that it recently imposed against another Burton -- Allen Burton, KA4URC. Not long ago, the FCC levied this Burton with a two thousand dollar fine for allegedly using indecent speech on the 20-meter band. He was given 30 days in which to pay or file an appeal.
According to the FCC, Burton apologized for the incident. He also told the Commission that he could not afford to pay the 2,000 dollar forfeiture. So, on November 23 the FCC issued a press release that said it was reducing the fine to only 200 dollars. With the reduction came a warning. The FCC told KA4URC that if he repeats the same violation again, the next time the penalty will be a lot tougher.
And if you think that the Commission has done a disservice to the amateur radio community by not holding Burton to the original $2000 fine, think again. The amount collected is not as important as getting a precedent setting conviction on the books. The Commission can now use the precedent set in the Burton case to go after other chronic offenders. The next ham who challenges Part 97 regulation in this area will probably not be anywhere near as lucky as KA4URC.

*****
Hackers Suspected in Boeing Probe

Authorities have charged 2 young computer enthusiasts with snooping into computer networks used by aerospace giant Boeing, a federal court and the Environmental Protection Agency. University of Washington student Matthew Anderson, 19, and George Katsaniotis, 21, each face one count of conspiracy to defraud according to the Federal Bureau of Investigation.
Anderson and Katsaniotis are believed to have initially broken into a Boeing computer in Bellevue, Washington. The suspects are alleged to have used the computer to decipher passwords, including one for the US District Court in Seattle. Government investigators allege that the pair copied the court's file into another computer and gained further access to court files and to EPA computers as well.
The pair were served summonses in Seattle. If convicted, each could be sentenced to up to 5 years in jail, a $10,000 fine or both on each count.
Boeing said no classified government systems were entered and that a preliminary investigation had determined the unauthorized access caused no damage to its computer or data systems.

*****
CYBERPUNK

And while on the subject of computer hackers, there is a new book out on the subject that we can guarantee will keep you glued to the edge of your seat. It's title is Cyberpunk and it is the in-depth story of three highly celebrated cases of computer hacking and phone phreeking worldwide. And, as you might suspect, there is a definite ham radio connection on both sides of the legal fence. In one story some of the hackers are identified as radio amateurs. In another it is the principal investigator is Cliff Stoll, K7TA. His exploits in busting the hackers involved West German "Project Equalizer" were chronicled in a 1991 PBS documentary.
Cyberpunk was written by Katie Hafner and John Markhoff. It is published by Simon and Shuster. Its one of the finest non fiction books to come along in years. We bet that you will not be able to put this book aside for more than a few minutes at a time.

*****
DX

The Northern California DX Club is inviting DXers from around the world to attend the 44th annual International DX Convention to be held in Visalia, CA, April 16, 17, and 18. Events will include seminars, DXpedition programs, exhibits, QSL card checking, prizes, ladies programs and eye ball QSOs with world class DXers. For further details, contact: Louise Bloom, KA6ING, 2520 Heather Lane, San Bruno, California, 94066, in the USA.

*****
CBDX

And finally, for those of you who like to monitor around the dial. Yes, that was a Citizens Band DXpedition operating from the island of Grenada last August 25th to the 30th.
No, we are not kidding. In fact, the December issue of Popular Communications magazine tells the whole story. Pop Com identifies the operators as members of the Alfa Tango Gang. This appears to be a large Venezuelan CB radio club that operated using the callsign 25 A T Zero on frequencies centering around 27.580 MHz for the entire five days. They used Uniden and Kenwood transceivers into a three element beam. They also had the full permission of the government of Greneda to operate on those frequencies.
And these operations are not likely to end. In fact, you can expect more CB operations like this from other rare localities as both legitimate Class D CB and illegal Freeband operations continue their explosive growth worldwide, in the months and years to come.

*****

[800]
GERMANY

The rumored changes to amateur radio regulations in Germany will not be taking place after all. About a three months ago, a European AMSAT area coordinator in Belgium spread word via packet that the German amateur radio regulations were about to be liberalized. Liberalized in a way that would mean German hams could -- and we quote -- put up FM repeaters in the middle of the 20 meter band. According to Newsline reporter Mitch Wolfson, DJ0QN in Munich, that simply is not and never has been the case. In fact, the vast majority of German hams have no idea why this mis-information was put out on packet worldwide in the first place.
Wolfson says that it is true that there were some new regulations proposed by the German Bundespost and that they were to be implemented as of January 1, 1993. But this change was canceled a while back due to the many problems the proposal caused. No, it was not of the political unrest stories as reported in the various ham newsletters published in the United States. Rather, the decision to abandon the changes was related to the costs of licensing and testing. Simply, it was going to cost to much to make it economically feasible.
In the political arena, Mitch says that it is true that the board of directors of the German national Amateur Radio society -- the DARC has resigned. But the reasons are internal to DARC and are in no way related to the government proposal to re-regulate the German amateur radio service.
Most of all. Wolfson says that there is no move to force a new German ham radio organization into being. Nor is there any interest by German hams in affiliating with one in the United States or anywhere else. This puts to bed the rumors that the

Bundespost was negotiating with some hams to form another German national society to replace the DARC in its oversight of the political representation of amateur radio in that country.

*****
PIRATE GIL BUSTED?

The FCC has reportedly busted a mystery seagoing ham radio pirate station off the Florida coast. In doing so, it has created an even bigger mystery as to who Pirate Gil really is. Pirate Gil was the name given to a station that for some time has been harassing members of a loose knit group on 14.313 MHz that call themselves the Better Amateur Radio Federation. Never heard of BARF? Briefly, they are a bunch hams who feel service nets providing international phone patching are illegal. Somehow, they find a way to spend many hours a day sitting on or about 14.313 making such a claim.

Some time ago, a station who identified himself only as Gil and using the callsign KD4VQ popped onto the scene. He took the side of those providing phone patching and soon drew the scorn of the Better Amateur Radio Federation group. It was BARF that dubbed him Pirate Gil. They said that Gil's callsign could not be found in the callbook or any FCC records and therefore he had to be a bootlegger. So, BARF filed a complaint with the FCC.

Now, we all keep hearing the story that the FCC has better things to do than to worry about ham radio problems. For years, everyone from the ARRL to local repeater operators have begged the FCC to act against various regulatory violators, but to no avail. It was always -- sorry but you hams are self policing. Do it yourself.

So, it was with more than a little bit of surprise that Newsline learned that it was the FCC's Vero Beach Monitoring Station that took very quick action based on the BARF complaint. And it acted in a most unusual way.

In early November, FCC Vero Bach Engineer Bob Mc Kinney arranged for the United States Coast Guard to stop and search a vessel called the Baltijka. Mc Kinney believed that Pirate Gil was making that his home on the Baltijka as he cruised from Connecticut to southern Florida. And it is here where the entire story becomes convoluted.

A report on the incident appearing in the December 1st issue of the W5YI Report says that the bust took place near the Coronado Bridge in the Intercostal Waterway near New Symrna Beach. But other news reports say that the boarding took place a lot farther south near Palm Beach, and the Palm Beach police were also along for the ride! But that's not all.

The W5YI Report identified the man found on board sailboat as being one Peter Skujins. But the W5YI reporter apparently did not bother to double check his story source. Now, information reaching Newsline indicates that the person who took the Baltijka out of a south Bristol Connecticut marina was a Victor Gomez.

Gomez was said to have purchased the Baltijka from Skujins earlier this year.
But who is Gomez? Could he be Gilman Nunes? Nunes is another named being bandied around in ham circles as being the real identity of Skujins. In fact, a newsletter reportedly published by the BARF group is said to have named someone named Nunes as being the seagoing mystery station. Confused? Well the mystery deepens even more.
Reportedly along for the interception of the Baltijka was Engineer Mc Kinney. Again, quoting W5YI, Mc Kinney is supposed to have found various pieces of radio gear on board the Baltijka including a Kenwood TS 440 allegedly used for the 20 meter pirate operations. But the FCC engineer says that he never bothered to obtain a search warrant so he could not confiscate the radio gear. In fact, all he could do was to let Skujins, Gomez, Nunes or whomever it was on the Baltijka proceed on his way!
And all of this leads Newsline to ask why? Why, if FCC engineer Mc Kinney was going to spend all of this time and government money to locate Pirate Gil, did he not think to bring along a search warrant and a U.S. Marshal to serve it? And another why? Why, when there are such other big fish to fry in relation to the happenings on 14.313 -- why does the FCC spend so much time and energy on a minnow like Pirate Gil and then let him simply sail away?

*****
THE GREEN SLAM

Speaking about the 20 meter net mess and other controversial high frequency operations. It appears as if 73 Magazine Publisher Wayne Green, W2NSD, has again taken on a pair of highly vocal hams. Hams that Green seems to view as being detrimental to all of amateur radio.
In his December editorial titled The Universal Hobby, Green takes aim at Herbert L. Schoenbohm KV4FZ who heads up the Better Amateur Radio Federation and International Amateur Radio Net Manager Glenn Baxter K1MAN, doing so by callsign if not by name. And he does so in a manner that leaves no doubt in the readers mind as to how little Green thinks of either man. Green says that it is time to make the home frequencies of both these hams into places of disdain. We quote: "Every time we run into a brain challenged ham let's encourage him to move to 14.313 and have at it. If that gets full, then we've always got 14.275 as a back-up sewer."
For those of you not aware, 14.275 Mhz is where Baxter issues his daily IARN bulletins, while 14.313 is the defacto home base used by Schoenbohm and those who support his views.
But Green does not end his attack there. He goes on to then sum up his feelings about Schoenbohm and Baxter in the most direct barb he has printed to date. Green writes: "Lets

figuratively flush our amateur toilet on these two frequencies, since nothing we can do will make them stink worse than KV4FZ and K1MAN already have.' ... end quote.
Until now, both Schoenbohm and Baxter have refrained from commenting on any of Green's negative editorials about them. But the tone of this one is different. It's hard. Its biting. Its direct. As such, it will be interesting to see if Baxter and Schoenbohm maintain the same aloofness to this rather scathing attack from the word processor of Wayne Green, W2NSD.
Newsline has invited responses from K1MAN and KV4FZ to this latest W2NSD editorial attack.

*****
FCC ACTIONS

Turning to more in the FCC enforcement arena, word that the Commission has acted again to lessen the punitive action it had previously taken against an alleged regulatory violator. In October, Richard C. Bortner, KG5WS, of Zapata, Texas, was ordered to show cause why his license should not be revoked. Bortner had failed to respond to correspondence from the Commission in June and August of 1992.
But on November 10th the Commission withdrew the Order to Show Cause in view of what it termed the on-going proceedings in the case. However, the FCC says that the termination pertains only to the licensee's previous failure to reply to Commission correspondence, and does not restrict the Field Operations Bureau from reasserting the original enforcement action against Bortner based on the underlying violation.

*****
SAREX

There are three Shuttle Amateur Radio Experiment or SAREX flights now definite for 1993. First up will be STS-55 in February and this may well be the first ever international ham radio convention to fly into orbit. This is because there will be two completely separate ham stations on that flight. In the cargo bay will be an European Spacelab with the German SAFEX amateur station operating FM voice on the 70 centimeter band, while United States astronauts Steve Nagel N5RAW and Jerry Ross N5CSW will be on two meter voice and packet from the shuttles mid-deck. The Germans will have a distinct advantage over the American operators. Their antenna will be a gain type vertical mounted outside the spacelab module.
STS-56 which flies an March 11th will also be a SAREX mission with space veteran Ken Cameron, KB5AWP in command. Also on board will be Ken Cockrell KB5UAH, Mike Foale KB5UAC and Ellen Ochoa KB5TZZ. The primary payload for STS-56 is the Atlas 2. The SAREX station will be an all out affair with congrats planned for FM voice packet, slow-scan TV and a fast scan ATV uplink. With a

night launch into a truly great for hamming 57 degree inclination orbit, STS-56 may be the prize flight for 1993.
The third SAREX flight for 1993 is STS-57 scheduled for launch on April 28th. This will be a seven day mission which will hopefully retrieve the European Eureca spacecraft. Brian Duffy N5WQW is the ham astronaut flying on STS-57 and he plans to be operational on both packet radio and two meter FM voice. Also note that the liftoff date for this one is the weekend after the 1993 Dayton Hamvention. It seems as if the SAREX planners want to be certain that there are hams at home to make contacts during the flight.
Seriously though, as the launch dates move closer, Newsline will provide you with updated information on all of these ham radio in space SAREX flights.

*****
HAMVENTION '93

Dayton Hamvention Chairman Dave Grubb, KC8CF, has announced that noted computer hacker tracker Clif Stoll. K7TA, will be the feature banquet speaker at Hamvention '93. As reported last week, Stoll is the researcher who discovered and exposed a group of German computer hackers who were breaking into high tech computers here in the United States. He wrote about his exploits in a book titled the Cucoo's Egg. Stoll and his one ham war against the Operation Equalizer hackers was also the topic of a 1991 PBS documentary and also an important subject of Katie Hafners new book called Cyberpunk.

*****
NEWSLINE CELEBRATES 800th

It was just 800 weeks ago that a California ham named Jim Hendershot, WA6VQP began a ham radio news service called Westlink.
Jim had worked with Christian radio stations around the world. WA6VQP also had a dream of using his acquired knowledge to start a ham radio news service for his fellow amateurs in the Los Angeles area.
The first Westlink news aired in September of 1976. It was driven to the top of a hill overlooking the Los Angeles basin by Wayne Rankin WA6MPG and played to the handful of members of the old 220 Rag and Tech net on 223.5 Mhz. By the time January of 1977 rolled around, Jims weekly bulletin had a region wide audience.
Can you believe it. Back in 1977 one of the most important issues facing hams was how to get inexpensive CB rigs to convert to amateur radio. I guess those would be called the good old days!
Well, all of that was a decade and a half ago. Now, somewhat to our own surprise, we are 800 weeks old -- over fifteen years

old -- and still going. And as we celebrate newscast number 800, we want to stop and say thanks to those who have made it possible.
First to Jim Hendershot WA6VQP who conceived the idea of a weekly on air ham radio newscast. And thanks to the many hams who have volunteered their time and talents to make it all happen. People like Alan Kaul W6RCL, Big Jim Davis KU8R, Robert Sudock WB6FDF, Mert Garlick N6AWE, Andy Jarema N6TCQ, Burt Hicks WB6MQV, Steve Mendelsohn WA2DHF, Paul Sullivan WA6CTR, David Black KB4KCH, Lenore Jensen W6NAZ, Paul Courson WA3VJB, Tony Valdez KC6LXQ, Mark Allen and others who have sat in the anchor seat.
To our many volunteer reporters around the nation and around the world and the hams who have been their on the scene engineers and ours. And a special word of thank you to several special friends. To our support fund administrator Norm Chalfin K6PGX, our long-time legal affairs reporter Joe Merdler N6AHU, to our statistician Karl Pagel N6BVU and to the man who set the standard for news reporting in amateur radio. To former HR Report editor Joe Schroeder W9JUV.
Nor can we end without paying a special tribute to those hams and radio clubs who sponsor regional newsline outgoing phones all over the United States. To Paul Migliorelli N2ETO in New York City, the Dayton Amateur Radio Association in Ohio, Ken Piletic W9ZMR near Chicago, the Arts group in Louisville Kentucky, to Paul Kirsfelds and Scott Bogue KE7LE in Washington State, to the Collins Amateur Radio Club in Melbourne, Floroida and the Southeast Florida Repeater Association of West Palm Beach. Each of whom are running outgoing service lines as we speak. And thanks also to Alex Magosci of Metroplex and Charlie Kozman of the Cherryville Repeater Association who were among the first to sponsor regional Newsline outlets. Finally to Frank Collins N6TAF and the Lets Talk Radio Network who deliver us worldwide by satellite and to John Desmond K0TG and the folks at the Darome Connection who give so much to make possible the Newsline sponsored National Teleconference Radio Nets.
We could go on with this list for hours, but time does not allow this. And we have probably missed a name or two already. If we have, we say thank you to you as well.
And our most important thanks goes to you our listening audience. Over the years you have grown from a small group of Los Angeles 220 MHz simplex users to hundreds of thousands of hams around the nation and around the world. It is because of your belief in us that Newsline is still here and reporting what you want to hear. We thank you for your trust and for your ongoing support. You make the work of our volunteers so worthwhile.

*****

[802]
AMSAT-OSCAR 3D PROJECT DELAYED

AMSAT-North America's President Bill Tynan, W3XO, says that a delay has occurred in the design of the new Phase Three D satellite. Tynan says that he has been advised by the European Space Agency that the conical interface to the launch vehicle originally identified as being available for Phase 3D has been withdrawn.
ESA has suggested that AMSAT develop a new proposal. This, to make use of a different, cylindrical interface. The new interface has some advantages for AMSAT even though the ham radio space agency will now be forced to write off about $17,000. This is the amount that had already been invested in the manufacture of rings designed for the conical interface.
Also, the physical design of the Phase Three D satellite will now have to be quite different than what was originally envisioned. This means that the drawings and physical mockups of Phase Three D now in circulation are obsolete.
Tynan says that AMSAT's design team is already at work preparing a new launch interface proposal. However,it will be early 1993 before a firm commitment can be obtained from ESA.

*****
SOMALIA

Amateur Radio is doing its part with the United States troops now serving in Somalia. According to the American Radio Relay League, the Military Affiliate Radio System -- better known as MARS -- is currently passing holiday and greetings messages from troops in Somalia back to their families in the USA. Right now this is a one way street from Somalia to the United States. This is because the soldiers are constantly on the move, bringing relief supplies to starving Somalis'.
Stateside, the MARS operators are being assisted by members of the ARRL's National Traffic System. In fact, the League is asking NTS operators willing to assist in this effort to contact their section's Field Organization leadership for direction as soon as they can. And back at ARRL Headquarters, the staff is sending a list of MARS contacts to all of its Section Traffic Managers. It is also sending a list of the nation's Section Traffic Managers to MARS contacts for coordination with them as well.

*****
NY RETEST

About two dozen hams in upstate New York have received a rather unwelcome Christmas gift from the FCC. According to Washington sources the FCC has ordered the retesting of this group after the ARRL's VEC invalidated prior results based on the possibility of an irregularity in their testing session.
After invalidating the session, the ARRL VEC reported the incident to the FCC which in turn ordered that the applicants stand for retest.
As is usually the case, the FCC will not release the names of

those being re-tested or the identity of the VE team involved. Nor has the ARRL VEC given any in depth explanation of the incident that lead to their invalidating the test session. It is expected that the retests will be administered by a different VEC. Also, no allegations of any wrong doing have been lodged at anyone by either the ARRL or the FCC.

*****
MACC EXPANSION

The Mid-America Coordination Council, better known as the Big MACC looks as if it is about to expanded once again. This with the announcement that three more regions have applied to become MACC serviced areas. The applicants are the states of Wyoming and Montana along with Michigan's Upper Peninsula. That brings the number of MACC member states to eighteen. Obviously, the Big MACC must be doing something very right!

*****
DARC

Two weeks ago, Newsline's Mitch Wolfson, DJ0QN brought you an exclusive report on what was really happening in regard to ham licensing in Germany and on what was really happening with that nations national society -- the Deutscher Amateur Radio Club. Mitch disputed the stories generated in United States ham radio newsletters said that the DARC had been forced to resign over their inability to get the German Bundespost to back off on proposed new ham rules. Yes, they did quit, but for reasons other than the problems with the German licensing agency.
Now comes word that DARC has new officers. At a special meeting on December 13th, the societies board of directors elected Dr. Horst Ellgering, DL9MH, as president, along with Prof. Dr. Jodi Elbers, DJ3XV, and Rolf Kadau, DJ7CH, as vice presidents. All three will serve until regular elections are held in May.

*****
BARF BOYCOTT

The packet radio boycott against Better Amateur Radio Federation has expanded to include the southern tier east-west wormhole route. Postings reaching Los Angeles say that the hams running the southern national packet backbone are joining with their comrades up north in the hope of ousting BARF members from the VHF and UHF bulletin relay systems.
As reported last week, the action to censor BARF started in the Chicago area where the Illinois Switching Hub is located. It quickly gained the support of packet sysops in parts of Indiana and Ohio and closed the Midwest Wormhole to BARF an its followers. Traffic from BARF is also being returned to its sender tagged as a bad user.

While there are many alternate east to west routes through individual digipeters these are no where as fast as the country wide high speed backbone systems. Closure of these two major east-west paths to Schoenbohm and BARF effectively cut them off from all VHF and UHF packet bulletin boards nationwide.
By the way. The packeteers are not protesting the way that BARF operates on 14.313 Mhz. They just do not want them bringing their fight with 20 meter service nets to packet and VHF.

******
PITCARIN ISLAND

From the United Kingdom comes word that its Radio Communications Agency has informed the RSGB that there is now a Reciprocal agreement between the UK and Pitcairn Island. The agreement allows for reciprocation between the UK Class A licence and the Pitcairn Island Full Licence. Pitcarin Island is the locality of the famous novel Mutiny on the Bounty and many of the inhabitants are direct descendants of the crew of that ship.

*****
CANIDIAN MERGER

Closer to home, word that the Canadian Radio Relay League and the Canadian Amateur Radio Federation report significant progress in their merger. As previously reported, they to create a new organization to be known as the Radio Amateurs of Canada. According to reports, progress is slow but steady as the lawyers and accountants work through the final items. Completion of the merger is expected by mid 1993.

*****
HTX202 MODS -- A Final Word

Finally, for those still seeking modifications to the Radio Shack HTX-202. Here is the text of a note from Radio Shack to W1UM. He posted it on packet and we quote...
"We at Radio Shack have said it before, and we'll say it again: THERE ARE NO MODIFICATIONS AVAILABLE FOR THE HTX-202! We intentionally designed the transmit and receive sections to be as tight as possible to reduce the annoying interference that most handheld ham radios receive". End quote.
The techs at Radio Shack add that they are aware of several belated April fool mods for the unit showing up on packet radio and warn people to ignore them all.

*****

[803]
MAJOR LICENSE DELAY

The FCC is telling Volunteer Examiners to advise those taking amateur tests that it could take as long as four months to get

his ham license issued. According to the Commission, the time for it to process a license application is now running about ninety days, but that does not take into account VE team and VEC handling of the paperwork. The Commission indicates that the actual time between a person passing an examination and his receiving a license is currently 120 days.
The FCC also says that applicants waiting for their tickets should not inquire on the status of an application until it has been pending more than 90 days. The FCC says efforts are continuing to reduce this waiting period but makes no promises as to when the processing time will be narrowed. Currently, the FCC is reportedly receiving about 7500 amateur service applications every month. The vast majority of these are new applications from no-code Tech's.

*****
222 MHZ SUBBAND PETITION

The FCC has set February 23 as the Commentary Cutoff Date and March 23 for cutoff of Reply Comments on a petition that seeks to create a non-repeater subband from 222.0 -222.150. Private Radio Docket 92-289 also proposes to give Novice class license holders wide-ranging privileges on both the 222 Mhz and 1240 Mhz amateur bands including the right to own and hold license over repeater stations.
The complete text of PR Docket 92-289 has been released. Its fairly short and reads as follows. We quote:
"In response to three petitions that involve unrelated changes to the rules for the amateur service 222 to 225 MHz band, the Commission has proposed creating a small new subband where repeaters are prohibited; authorizing frequency privileges for Novice Class operators in the entire band; and allowing Novice Class operators to be licensees and control operators of repeaters in the 222 to 225 MHz band as well as in the 1270 to 1295 MHz segment of the 1240 to 1300 MHz band.
The ARRL requested that a new subband be designated at 222.000 to 222.150 MHz where repeaters would be prohibited, but where all other types of station operation could continue. It said a small segment is needed where experimentation can take place but where frequencies need not be shared with repeaters.
The ARRL also requested expansion of the frequency privileges for Novice Class operators to encompass the entire 222 to 225 MHz band. It believes that Novice Class operators would benefit from such an expansion because they would be exposed to routine types of amateur station operation other than just repeater operation.
Dr. Michael C. Trahos requested that Novice Class operators be authorized to be licensees and control operators of repeaters in the 222 to 225 MHz band and in the 1270 to 1295 MHz Novice subband of the 1240 to 1300 MHz band. He argued that the amateur service should follow the General Mobile Radio Service and the Private Land Mobile Radio Services where license holders are

authorized to be licensees of repeaters without even being required to pass an examination in proper repeater operation." end quote.
The Commission said it believed there was merit in both of these petitions and asked for comments on the proposed rule changes. The commentary cutoff date on PR Docket 92-289 is February 23rd. Reply comments are due no later than March 23rd.

*****
RESTORE HOPE RESTORES HAM RADIO TO SOMALIA

Ham radio is again on the air from Somalia, but it is primarily foreigners who are operating the stations. One of these is Robin Critchell, WA6CDR, a Los Angeles broadcast engineer with CBS. He says that he plans to operate mainly CW whenever time will allow. Robin notes that he may have to go QRT suddenly on occasion, as his work takes priority. All cards go to Robin at his Callbook address.
Another station signing T5CB has been worked on 10, 15 and 20 meters. Other T5 stations associated with Operation Restore Hope are expected on the air soon.

*****
NORTH KOREA ON THE AIR!

An unexpected operation from North Korea marked the end of the 1992 DXer's year! JA1BK reports that Romeo better known as IS0RR, 3W3RR, and several other callsigns. Romeo was in North Korea in late December operating as P5RS7 through the end of the year. P5RS7 was first heard on December 19th at about 00:20 UTC on 7.045 MHz. At that time he was working Japan. Later Romeo was reported working the west coast of the U.S. on 28.495 MHz around 01:15 UTC. Other bands and frequencies followed.
The only thing not known is if this operation will be accredited by the League for DXCC country credit. It will be several months before the DX Advisory Committee will be in a position to examine the logs and operating permits. But even if the DXCC desk says 'no' it is still a contact of a lifetime for many. By the way, the operators say to QSL via JA1HGY.

*****
RAYNET PHONE RESCUE

In England, Raynet is the name given to their Amateur Radio Emergency Service. And on December 14th Raynet groups in the North Cambridgeshire Area got a chance to prove that they were ready to handle any kind of an emergency.
Early in the day, Raynet was alerted to a serious problem at the Peterborough General Hospital. Led by G6CKR, of the Four Counties Raynet Group, communications were rapidly restored within the hospital where all telephone paging, cardiac arrest alert and similar systems had failed.

The hospital thought it had its phone system repaired and in working condition the following morning and the Raynet operation was stood down. However, the same telephone systems failed two more times that week and on each occasion Raynet again installed its local communications and supported the hospital administration. Altogether in excess of 675 man-hours and some 120 Raynet operators were involved in these three operations.

*****
ALBANIA

The Radio Society of Great Britain says that the Albania Appeal it launched last April has raised more than 4,500 Pounds to help the mentally handicapped people in Albania. The RSGB's check in this amount will be handed over to the Albanian Mencap group shortly. Mencap is the organization that requested the monetary assistance from the members of the British radio group.

*****
CHINESE LICENSING

Executives in IARU Region 3 say that China began permitting operation by individual amateur stations beginning December 22. Prefixes for the new Chinese home stations are BA, BD and BG.

******
RADIOSCAN NAME CHANGE

Radioscan has started 1993 by becoming Amateur Communications Magazine. According to Publication Director Rita Vianney, KC4MJG, the decision to re-title the periodical because of a misunderstanding by radio hobbyists as to the thrust of the magazine. Many thought it was a scanner hobbyists publication and found themselves surprised when the theme was amateur radio. After scanning all options, Vianney said that the decision was made to adopt the title 'Amateur Communications' which she makes it far easier to honor the publishers policy that it will be a two-way magazine. Like its predecessor, Amateur Communications is the only magazine available in two languages. English and Spanish.

*****
YOUNG HAM of the YEAR

The Westlink Report newsletter says that its 1993 Young Ham of the Year Award will be presented at the Huntsville Hamfest and ARRL National Convention in Huntsville, Alabama the weekend of August 14th and 15th. Thanks to the generosity of Don Tunstill, WA4HOK, and the Huntsville Hamfest planning committee, the young ham award ceremony will take place at the convention banquet on Saturday evening.
Cutoff date for nominations is June 30th. For a nominating form please send an S.A.S.E. to the 1993 Westlink Report Young

Ham of the Year, 28197 Robin Avenue, Saugus, California 91350.

[806]
ARRL vs. NO-CODE

The ARRL Board of Directors met in Jacksonville, Florida, January 15th and 16th and one of its decisions leaves no doubt that the League believes that no-coders have enough in the way of operating privileges. While they never mentioned the no-code Technician class by name, the Board did vote to -- and we quote -- to reaffirm its position that international Morse code proficiency must remain a requirement for licenses conveying privileges below 30 MHz, as currently specified in the International Radio Regulations.
Why this board action and what does it mean? Over the past several months, Newsline has reported on several groups that are recruiting no-code Technician class amateurs as members. Last week we reported some rather astounding numbers. Numbers indicating that there are now almost 200,000 Technician class amateurs with almost a quarter of them being no-coders. Another 49,000 amateurs are expected to join the United States amateur radio ranks in the next twelve months. The vast majority coming in through no-code as well.
With the proliferation of codefree Technicians have come those that are attempting to organize these new hams into a very political power base. Some like the National Amateur Radio Association have to date been very supportive of ARRL efforts. Others like the National Alliance of Codefree Radio Amateurs are demanding that no-code Tech's be given the same high frequency operating privileges now enjoyed by General, Advanced and Extra Class licensees. Other groups advocating expanded HF privileges for no-code hams are expected to pop up as the license class grows in popularity.
In taking the action it has, the ARRL drawing a proverbial line in the sand. Its telling the no-code Technicians and their advocate groups that the only way to high frequency operation is the traditional route of study and upgrade. That the members of the American Radio Relay League and the holders of higher class licenses will accept nothing less.

*****
ARRL PACKET PROGRESS

Some good news for the proponents of high frequency packet radio. Based on the recommendations of its Digital Committee the ARRL Board of Directors has decided to petition the FCC for specific segments on the HF bands where automatic control of digital stations will be permitted. The League says that it will ask the FCC to establish subbands on 80, 40, 20, 15 and 10 meters. Subbands will also be requested in the 10, 18 and 24

MHz, and 28 WARC bands.
The Board did not act at this time on the committee's recommendations to permit semi-automatic operation on all frequencies where data modes are permitted. Instead, the Directors asked the Digital Committee to continue its study of how additional data operations can be accommodated in the HF bands. This, while adequately protecting amateurs using other modes and pursuing other operating interests, and report back in July.

*****
ARRL TO STAY ARRL

The ARRL Board has decided to keep the American Radio Relay League as the American Radio Relay League. Last year the Board decided to see if it should consider changing the organizations name to better reflect the objectives of the organization. The membership was given a year to provide its opinion. They did and as a result of the input, the directors have abandoned any further consideration of a change in the name of the organization.

*****
Miscellaneous BOARD ACTIONS

In other matters, the board says that the League will seek formal recognition by Congress of the role of Amateur Radio as a national resource in disasters, and for technical progress in electronics. It also has assigned the Newington staff with developing a plan for Board consideration for increasing the availability of exams in Alaska. This, in light of the possible incorporation of Novice exams in the VEC program.
The board also has commended Amsat North America President Bill Tynan, W3XO, for his lengthy and faithful service to Amateur Radio. Jerry Hall, K1TD, was commended and thanked for his great contributions to the League and Amateur Radio during the span of his twenty-three year career at league headquarters.
And finally, we have the results of the election of the 1993 Executive Committee. Elected to serve are Directors Stephen Mendelsohn, WA2DHF, Joel Harrison, WB5IGF, Marshall Quiat, AG0X, and Howard Mark, W0OZC.
Watch for the full story on the meeting in the March issue of QST magazine.

*****
FLOOD RESCUE

Southern California hams have become a communications lifeline to nearly six hundred campers stranded at a campsite near the city of Temeculia. According to Dennis Clark, N6MZH, the emergency began on Sunday morning, January 17th when he was notified of the communications emergency that had been declared

on the Clairmont 145.22 Mhz repeater. The control operator of the repeater informed Clark that he was in contact with Julian Black, K6HMT, at the Thousand Trails Campsite and Recreational Vehicle Park on State Highway 79, and that the access road to the campsite had been washed out by torrential rains that have pounded the region for over a week.

Clark told Newsline that there were at least three hundred vehicles and more than six hundred people stranded in the RV park. Reports indicated that electrical power, telephones and running water were all inoperative and that the supply of food was running low. The hams from the Clairmont Repeater Association remained on the air in communication with the campsite throughout Sunday and Monday, handling communications aimed at getting aid to those stranded and passing along routine health and welfare messages to and from the families of those stranded. A call to the Navy by the repeater group brought a helicopter to the site with food, fuel and needed prescription drugs since many of those stranded were described as elderly.

Clark said that there were no medical emergencies but it was expected that those at the campsite, including his mother and father would remain stranded for several more days until flood waters recede. About a dozen members of the Clairmont Repeater Association were active in this aid and rescue effort.

*****

LICENSE PROCESSING DELAY EASING

The FCC license processing delay appears to be easing a bit. This, according to Gordon Girton W6NLG who administers northern California's Sunnyvale VEC. Girton says that he did a check with the FCC's Gettysburg Pennsylvania License Processing Facility the week of January 14th. At that time he found that the processing time had dropped from the 90 to 120 days announced by the FCC just before the Christmas holidays to around 60 days in mid-January.

Girton added that what the FCC calls Level one processing has been performed on all Form 610 applications that arrived prior December 2nd. He also says that his VEC operation ships all completed applications to Gettysburg using Federal Express to minimize delay. Since some VE teams and VEC operations use standard U.S. Mail as their delivery carrier, further delays of a few days to several weeks are still possible.

*****

FAR SCHOLAR

The Foundation for Amateur Radio says that it plans to administer forty-seven scholarships for the 1993 - 1994 academic year. This, to provide financial assistance to licensed radio amateurs seeking higher education.

The Foundation for Amateur Radio is composed of fifty local area amateur radio clubs fully funds five of these scholarships with income from grants and proceeds from its annual hamfest. The remaining forty-two administered by the foundation without cost to the donors. The awards range from $500-$2000 with preference given in some cases to residents of specified geographic areas or the pursuit of certain study programs. Additional information and an application form are available by writing to the Foundation For Amateur Radio Scholarships, 6903 Rhode Island Avenue, College Park, MD 20740.

*****
PITCAIRN ISLAND

In DX, VR6JJ and VR6BB are active from Pitcarin island with plans are to stay until early March. Their operation is on 160 through 6 meters using CW, SSB and RTTY. On 160 meters they transmit on 1824 Khz and listen on 1910 kHz. They also have a six meter beacon on 50.120 MHz with a contact coordination frequency 28.885 Mhz. QSL via JF2KOZ.

*****
NEW 'LOFER' BEACON

And finally, KB4OER reports that his new Low Frequency beacon signing as OER is now on the air. The service is running 24 hours, 7 days a week on a frequency of 187.58 KHz. The antenna is a 40 foot TV push-up mast with a 10 foot diameter spoked aluminum capacity hat. There are eight fifty foot long ground radials connected to a five foot copper ground rod at the base of the antenna. The ground system is also tied into the house water pipes. The transmitter conforms to FCC part 15 regulations with only one watt input to the final.
Doug says that he would welcome any reception reports and notes that winter is the best time for this band. This is because the static levels are at a minimum. Send verifications by packet to KB4OER at the W7LJD bulletin board in Tennessee.

*****

[807]
WHITEN ISSUED NAL

The FCC has handed a ham a record ten thousand five hundred dollar notice of apparent liability to monetary forfeiture. The fine was issued to Richard L. Whiten, WB2OTK of Taylors, South Carolina for what the FCC called malicious interference to the communications of other ham radio operators.
As previously reported, the FCC's Kingsville Texas office says it monitored and recorded a conversation on the frequency of 14.314 MHz back on September the 26th, 1992. This communication is where the FCC alleges that Whiten had violated section 97.101,

subpart D of its rules by interfering with Michael Galego KA4MUJ and Judy Dearing KA1SKV.
According to the January 19th Notice of Apparent Liability to Monetary Forfeiture, Whiten did not dispute making the cited transmissions but did deny that they constituted willful and malicious interference. Whitten also alleged that he was being made the victim of entrapment by other vindictive radio amateurs. But the FCC viewed it a different way. Their Kingsville office looked at this as a simple case of Whiten interfering with other amateur communications. The notice says that the base amount of the fine is $7000 but that it has been adjusted upward another $3500 dollars based on what they claim to be WB2OTK's repeated violation of rule 97.101, subpart D. This latter is a charge that Whitten not only disputes, but says is now well outside the statute of limitations because the FCC failed to respond to his request for a hearing.
Whiten has been given 30 days to ether pay the fine or to file a petition for reduction or non-imposition of the penalty. WB2OTK told Newsline that he has no intention of ever paying the forfeiture. He says that he plans to hire an attorney to fight the matter through both the administrative appeals process and if needed, into the federal court.
Whitten also wants to know why several Amateurs who openly claim to be supporters of the Better Amateur Radio Federation were able to get information on the exact dollar amount of this fine and publicize it over the air. This taking place several weeks before the letter dated January 19th was written to him. He says proof of this exists in the form of off-air audiotapes. If this is true, then the FCC has a security leak that it had better find. It also had better find a way to explain to the amateur community why it occurred in the fist place.

*****
KV4FZ SENTENCED

The ham generally credited with starting the Better Amateur Radio Federation as a way of stopping alleged misuse of telephone patching privileges by members of service nets has himself been sentenced for a telephone related offense. On December 30th, Federal District Court Judge Anne E. Thompson told Herbert L. Schoenbohm, KV4FZ, that he must spend two months under house arrest, serve two years probation and pay a five thousand dollar fine. This, as a result of his conviction last April 24 on a charge of 'Fraudulent Use of Counterfeit Access Device' back in 1987. The imposition of this sentence is the latest but probably not the last legal action in the case.
According to court documents provided to the Westlink Report ham radio newsletter, Schoenbohm originally faced three interrelated charges. In addition to the charge on which he was sentenced, KV4FZ had also been indicted on charges of 'Fraudulent Use of Unauthorized Access Devices' and 'Possession

of Counterfeit or Unauthorized Access Devices.' In all three cases, the 'access devices' in question were account access numbers of the now defunct Caribbean Long Lines telephone service.
The actual term of the sentence imposed by Judge Thompson was two months in the custody of the Bureau of Corrections, which was then immediately suspended. In lieu of jailtime, Judge Thompson placed Schoenbohm on two months house confinement with two years probation and a $5000 fine, none of which is waived. The fine is to be paid during the period of probation. The official Federal Sentencing Guidelines for this offense give the judge discretion of imposing imprisonment for 2 to 8 months, supervised release from 2-3 years and a fine from $1000 to $10,000.
Imposition of the sentence was scheduled to begin on January 11th. It could have been held up again if Schoenbohm decided to file a further appeal with the United States Circuit Court of Appeals in San Juan, Puerto Rico. Schoenbohm has been reported to have stated on-the-air his intention to take the fight to overturn his conviction to the United States Supreme Court if no lower court finds in his favor.

*****
BARF IN LIMBO

Herbert L. Schoenbohm's loose-knit support group that calls itself the 'Better Amateur Radio Federation' is still being held in 'packet radio limbo' by thousands of Packet SySops nationwide. These SySops are refusing to pass along or post any messages, traffic or bulletins from the group.
The so-called 'BARF Filter Action' began in Chicago in early December. First, when BARF postings were banned from both the Illinois Switching Hub and the popular landline 'wormhole' that feeds messages from the northern mid-west to the west coast. The embargo of BARF traffic reached its peak in early January and no messages from any member of the group are being disseminated 'ALLUS' at this time.
What makes this embargo very unique is that the vast majority of those delaying or killing BARF bulletins do not even operate the high frequency amateur bands. Most have probably never heard the BARF operators in action.
Rather, they view their censorship of the postings by the Better Amateur Radio Federation as a way of isolating the problems between that group and the various service nets to the high frequency spectrum and not permitting it to boil over to VHF and UHF. BARF contends that this action to censor and embargo its views is unconstitutional and a violation of its members civil rights.

*****
INDUSTRY MEETING

The first annual meeting for 1993 of the Amateur Radio Industry Group will take place at 7:00 P.M. on Friday, February 5 at the Miami Airport Marriott Hotel in Miami, Florida. The gathering is open only to manufacturers, publishers and retailers serving the amateur radio marketplace and has been scheduled to coincide with the Miami Tropical Hamboree amateur radio convention. According to 1992 Chairman Mike Forsyth, the exact meeting room number will be announced during the Friday convention display set-up at the Dade County Youth Fair Expo Center and will also be posted at the hotel. If you or your company provide any form of commercial supply service to Amateur Radio and can be in Miami on February 5th you are cordially invited to attend.

*****
CAROLE PERRY

With the convention season now on us, at least one regular on the circuit is looking for some new faces. She is educator Carole Perry, WB2MGP who runs young peoples forums nationwide. Carole says she needs youngsters to take part in these sessions. If you are interested in being a part of one of Carole's youth forums, you can write to her at Post Office Box 131646, Staten Island, New York 10314.

*****
DAYSCHOLAR

The Dayton Amateur Radio Association is announcing the availability of applications for it's annual $2,000 scholarships. The scholarships are offered to 1993 graduating high school students who have a ham license. Request applications by sending a SASE to the DARA Scholarships, 45 Cinnamon Court Springboro, Ohio, 45066

****
DX

In DX, a major DXpedition is now taking place under several French callsigns from the West Indies. The islands being visited include Martinique, St Lucia, St Vincent & Grenadines and Grenada. The equipment is a TS-450 transceiver, a R7 vertical antenna, a KAM tnc and a PC notebook operational on 40 through 10 meters including the WARC bands using SSB, CW and RTTY. The Logs are be fully computerized for dupe checking. QSL as directed by the operators.

*****
ELVIS THE HAM?

And finally this question. Has the United States Postal Service declared the late Elvis Presley to be a ham? WD4ELX says via packet radio to look at the new Elvis stamp and decide for yourself. Vic says that 'The King' is seen holding a mike to

an old Hallicrafters radio. He also thinks that if you look at Elvis mouth, it appears as if he may be calling CQ! Vic also suggests that you try looking at the stamp under the laser scanner in the grocery store and see if you can see the hidden message embossed in the mic. We at Newsline have been a bit hesitant to try this. The Check-Out clerk at the local Vons super market looks a lot like Elvis and we would not want to blow away his cover! Our thanks to WD4ELX for posting that one on the packet networks on Elvis day.

>first.

Hi Rob, your zener diode crosses to an ECG5030A, it is a 22 volt 1/2
watt zener diode. Hope this helps!:)

Joe at jef812@ix.netcom.com

P.S. You don't have to use the original number of your diode or the ECG
number, any 22 volt 1/2 watt diode will do. You can even use higher
than a half watt diode, as long as the voltage is the same.

3384. Re: Joining the ARRL -- Why?

Newsgroup: rec.radio.amateur.misc

>>In <jmaxwellE1vFtI.6wB@netcom.com>, jmaxwell@netcom.com (james a maxwell) writes:
>[snip]
>>The point is you people (collectively, perhaps *you're* and exception)
>>ARE the problem in large part ... not a part of the solution. I
>>strongly believe that another national organization needs to be formed
>>to break the ARRL's stranglehold on ham radio, particularly in
>>regulatory matters, where the league outright lies to the FCC by
>>claiming to represent the interests of *all* US hams ...
>
>Be careful, Carl. The League may attempt to *imply* that they speak
>for all of amateur radio, but I haven't found a filing yet where they
>actually make that claim.

OK ... but the INTENT of the implication is so thinly veiled as to
constitute a claim in my view ... perhaps even in legal terms, though
I'm not the expert in that area (Phil Kane, where are you?)

>In fact it is the FCC which likes to assume
>the ARRL speaks for all amateurs because it makes *their* job easier.

Sure, like most bureaucrats, the ones at the FCC are prone to take the
easy way out if it is presented, and the ARRL's willingness to take the
role presents just such an opportunity ... that's EXACTLY why we NEED
another national organization to take them to task and keep things more
"honest" ...

>Only in cases where the FCC's nose is rubbed in the fact (like in the
>code test free Tech case) will the FCC acknowledge that there are other
>points of view besides the one presented by the League.

And we need to hold their feet to the fire a bit ...

>The League does nothing to disabuse the FCC of this desire for SPOC,
>of course. It would be foolish for the League to do so since it would
>serve to diminish their influence. In many cases, that influence has
>been to the advantage of amateur radio. (In others it hasn't, of course,
>but whose fault is that? Isn't it the fault of those others in amateur
>radio for not speaking up and letting their voices be heard?)

I've been amongst the large numbers of hams who have been speaking up
and being systematically ignored by the CW eletists in Oldington for
years ... To quote from "Network" ... "We're mad as hell and we're not
going to take it any more!"

>>>We've all heard about hams who've tried to offer some comment or complaint
>>>to the local ARRL rep and have gotten nowhere. If you feel that your
>>>local League rep is doing a lousy job, don't just complain and then walk
>>>away - *do something about it.* Find out who the individual's boss is
>>>and tell the boss. If nothing else works, throw the rascal out!

We need to throw ALL of the rascals out ... but that isn't likely to
happen because the rascals control the system ... the fox is literally
the gatekeeper to the henhouse ... clearly an untenable situation.

>>>just come on .misc or .policy and complain, run for office yourself and
>>>show the world how the job *should* be done. If you don't have the time
>>>to hold office yourself, find and actively support someone who does.

To what end? The deck is stacked against outsiders ... if you don't see
that, you're not being realistic, and that's uncharacteristic for you
from my previous experience with your posts ...

>>I don't believe that the ARRL can be turned around from within ... there
>>are too many entrenched bureaucrats and politics as ususal good old boys
>>for that ... the league simply must be bypassed by an organization that
>>will represent the future of ham radio, rather than it's nostalgic past
>>

>Don't you realize that in many cases League offices are filled by
>elections where the annointed runs *unapposed*, or whose opponent
>is only Tweedledee to the other's Tweedledum? There is enormous
>opportunity to present a real alternative to the electorate.

The "electorate" consists, to a significant degree, of the fuddy-duddies
who thing "CW is king" "real hams pound brass" and "we don't want none
of that new-fangled digital stuff" ... they are, to a significant degree
more a part of the problem than a part of the solution ...

The key is the 2/3 or more of hams who are NOT league members and those
"members" who are really only "subscribers to QST" ... that's where the
real political power in ham radio lies and we need to harness it ...

The league *can't* ... they've tried ... and they fail miserably ...
they simply cannot sell their outdated bill of goods to the majority of
US hams ... not at $31/year for MISSrepresentation and incompetence ...
not at $10/year, I would suspect ...

It's not that people can't afford the $31 ... the just disagree with the
league's policies, are pissed off at the way the league lies to the FCC
about "what US hams want" ... etc. They simply don't see any VALUE in
the $31/year ...

If an organization can be structured to be more responsive and
representative and provide a source of news, information, and political
input, I think the currently UNrepresented 2/3+ (majority) of US hams
would jump on the bandwagon ...

Carl - wa6vse
carl@ais.net

NO, Paul ... NOT for modes designed for HF, where the propagation characteristics and channel impairments are VERY different than at VHF/UHF ... to develop and test things for HF, access to HF is required.

I only *reported* what I heard. The narrative was of Chaplain
Ammerman's statements during his guest appearance.

3389. Q: The ARRL Survey

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-12 00:00:00 UTC
From: n4jvp@ix.netcom.com
Message-ID: <32aff338.1627811@nntp.ix.netcom.com>
Source record: 210438

The ARRL survey concerning the Morse code requirement has been
mentioned several times in this newsgroup. Could someone post a copy
of the survey?

I think that there are many hams who would favor some sort of a
no-code HF ticket but do not wish to open our entire HF spectrum to
no-code operators. Did the survey provide a choice for an answer like
that or was it more of a *Do you still beat your wife?* yes/no survey?

In article <58o2rn$aps@news2.ais.net> carl@ais.net writes:
Right now, the government is forcing the code on anyone who wants to get

One should note that it is not really the government which is to blame. It is the majority of the amateurs themselves. At least in Finland it has been that THK (our equivalent of FCC) would have permitted a change but the amateurs themselves have told that the old system should be kept.

Right now I am eagerly waiting what will happen to our call areas. So far we have had 10 call areas which roughly follow the province lines. Yesterday the parliament decided to combine several provinces into larger ones. I hope, against the general opinion of OH hams, that the call area system would be abandoned totally. USA is much larger than Finland and if USA does not need a call area system, why should we? It is not the THK which is the cause for this unfortunate state of still having call areas in here. It is ourselves, the local hams, who have insisted on keeping the old system.

Much of the problems you may have might be of similar self-developed origin.

>Morse code /= ham radio ...

>radio technology, experimentation, learning, self-improvement = ham
>radio.

Carl, why isn't that being done now from 30MHz on up? Just what
advances have been made in amateur radio since the no-code technician
license came to being? You say you:
"want to work for the future of ham radio by building,
experimenting, and improving our technology ... by
meeting the purposes and goals that ham radio is
supposed to be about ..."

Why aren't you doing THAT now? Do you have to have it the way you
want it before you'll do anything for it? All I see is bitching and
griping because you cannot have such a small part of the amateur radio
specturm because the government is "forcing" you to learn and
antiquated mode against your wishes.

IMO the majority of people coming into the hobby now via the entry
level of the no-code tech route are just memorizing the question pools
by listening to tapes or just studying the question pools themselves.
They aren't really learning how to apply the technology. How do we
get them into meeting the purposes and goals that ham radio is
supposed to be about? They just want to talk on the radio. They
could care less how it works and they depend on others to tell them or

hold their hand to show them how their new HT or mobile rig works. They don't want to read the manual...they can't understand it. (I can't blame them there..hehehe) Point is when you try to elmer someone nowadays they take it as you are trying to tell them what to do and they resent it. A lot of the old timers have given up on them because of this problem.

Modernization of ham radio...hmmmm. You don't want it to be an evolutionary thing. You want to go from the amoeba to upright talking homosapien in one step.

You will only appreciate amateur radio after it's gone.

Cheers! jim, wk1v

>What happened to the idea that amateur radio was not only being able to
>talk to people in strange, far-off foreign lands, but to do so using
>equipment you put together yourself ?

I suppose to each his own. I see nothing wrong with building your own equipment. Kind of the grow your own vegetables version of ham radio I suppose. I imagine there is something to that.

Though, honestly, it's not really my gig, you know. For me, I'll build it if it does something new that I can't buy yet. But, honestly, I don't really feel a need to build other things that are in my life. I don't want to build a TV set or a car or a sewing machine. Maybe in the old days people built CW transmitters, but I don't know, I want to move forwards. I'm not interested in ham radio as a living museum of radio pioneering. The living museum version of ham radio is never going to attract more than a few thousand people in the entire US, I think.

In the old days of ham radio, CW transmitters were really cutting edge stuff. And people put a lot of effort into building them. In the 20's, a vacuum tube was like an IC of today. Nowadays, CW transmitters are old news, and fewer are interested. To maintain the spirit of the old days when people built stuff, we need to be building on the edge of technology. Like they were then.

I want to see some really cool stuff. That's what'll jumpstart this hobby, I think. Technology that'll clean out your sinuses with amazingness. I want HAM hdtv, with full stereo sound. Or maybe some kind of Ham Radio Virtual reality. Or maybe some kind of 3d sound technology. New ham radio operators are going to come when people on the outside see ham radio as a medium where they can do things that they can't do otherwise.

see above.

>
> AND I have also voiced my distaste for those who merely "yack and beep"
> like "CBers with an attitude" ...
>

Maybe YOU should find a new hobby. Seems that the reason the ARS is using what it does is because of the beepers who wnat to beep further and yackers who want to yack further.

BTW, the BEEPER and YACKER reflectors LOVE your posting. You've been voted amateur of the year!!!

>of HF access is a barrier to testing things for that environment

Yada Yada Yada... Blah Blah Blah.

Hey Carl, your record is stuck again.

[Carl forgets that everything above 30mhz has been available for half
a decade with no code examination.

To think... All this effort to get on "HF" where the primary activities
are two-fold: contesting and DXing... Two activities that Carl admits he
despises...

Oh, woe is Carl. Maybe someone should write a play. This could rank
right up there with some of those Greek tragedies I had to read in
high-school.

>many of the engineers I have worked with over my 25+year career simply
>refuse to stick their noses up the backside of some "higher class"
>beeper who knows less than they do and still looks down on them because
>they don't beep ...

As opposed to what? Your '25+year career' buddies who look down on everyone
else in amateur radio because they have "forgotten more RF theory while
eating breakfast that the combined knowledge of the entire universe's
ham population put together" will ever know? (Your words, Carl.)

Despite the lack of good theoretical examinations, I'll take what we
have today: a cross-section of Americana, where I can pick up the
microphone and talk to a cardiovascular surgeon, security guard, and
housewife in a roundtable, rather than a bunch of bigoted techno-snobs
who work for some commercial venture.

>Au contrair ... I've referred many times to the dozens and dozens of
>highly competent RF professionals I've worked with over the years who
>have not become hams PURELY because of the code requirment ...

And to think they don't know how to read... Otherwise they would have
discovered that Tech license half-a-decade ago.

I have seen this argument dozens of times and the only way it makes
any sense at all is if the aeronautical, maritime mobile and the
amateur radio service share the same frequency bands in the US :-).

As far as I know, this is not the case. A ship or a plane in danger
would try to attract attention using emergency frequencies assigned to
maritime mobile and aeronautical services respectively. Even if the
transmitter would be capable of transmitting on amateur frequencies,
would the operator know which frequencies to select.

Requiring CW profiency for such extremely unlikely situations is just
like requiring that all pedestrians wear a helmet, since some people
have fallen and died from head injuries.

3404. HELP Wiring Kenwd remote plug --> amp

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-12 00:00:00 UTC
From: "Roger D. Placer" <rogerp@lucent.com>
Message-ID: <32B01C95.4746@lucent.com>
Source record: 210453
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Hi all,

Thanks for the replies to my query about the tuner/linear amp
relationship. I have a specific question now:

Can anyone help with a wiring diagram for the Kenwood 9/8/450S Remote
plug? This gets wired to the twin phono plugs required at the linear's
ALC and Relay jacks. Unfortunately, the Kenwood manual only shows a neat
cable running between the two locations, but gives no pin information.
The Remote plug comes unwired, so I need the details!

Thanks in advance...

To all:
Yes, I do have a few problems. A: I am dislexic. B: I'm as dumb
as a post. In fact, If you put my brain up against that of the post, the
post would run rings around me. C: yes, I do get passionate about certian
things. D: That does Not make me paranoid, unless several million other
hams are as well. I have a big problem. I love this hobby with every
fiber of my being, and Never would do anything to harm it. Yes, i am also
aware that 20 gazillion people worldwide do not have access to it. Wich
has been my point all along. I do not want to see the U.S. join those
masses. Certian people will say that I make the hobby look bad. Was the
ECPA of 1986 just a figment of my imagination? Was the arrest of that
young ham in Kentucky for carrying a HT wich some cop mistook for a
scanner just another paranoid delusion? But I ramble. Maybe ishould just
shut up, and forget about such things...Not on your life, Roger! I love
this hobby too much to see it die. I will not stand idly by and watch it
go down the tubes in passive silence. If this is acting paranoid, I revel
in it!
73's,
Dave/ KB2ZYO
P.S.: Why not be bold , and use my ENTIRE statement? Cut
and Paste Is a wonderful tool ,don't you know...Like all things it can be
used...And abused.

> All sorts of stuff

Now Carl, please go back and re-read what *I* wrote.
You replied to extracts in my posting as though I wrote them, and made extracts from my posting without context, and applied your own.

As an FYI: I am not at all frightened by technology. I have built "good stuff", I have
spent many years programming, and am not in the least intimidated by computers
or digital techniques.

I am trying to get across that none of this is necessary to amateur radio
to be "magic". I get so fed up of running into technocrats who know absolutely
nothing about analog techniques, and insist in doing everything digitally - taking
steam hammers to crack already shelled nuts.

Everything has to be digital - even if the end result is inferior.

I was trying to get accross that there is a "magic" to ionospheric long range
contacts, which is equivalent to, but not the same as making the same contact
with an FM HT through a phase 3D satellite. In the second case, you may as well
have used the internet or telephone - you are leaning on high technology resources,
provided by others, well beyond your means to produce yourself.

I have seen far too many people put off amateur radio, after being initially
curious and maybe reading about it somewhere - then running up against:

* techno babble which scares them off.
* the "learn-CW-or-we-will-kill-you" brigade.
* mindless gibbering on repeaters (you decide if its hams or jammers ...)
* old farts (TM)

There *is* more to amateur radio, and it doesn't have to be hard or require
a degree in mathematics, physics or electronics to feel hat "magic".

You know Carl, to some people, the fact that they can replace your "few pages
of VHDL code" and ASIC programmer with a few bits of bent wire and a couple of
capacitors, for a result which may be less technically "pure", but achieves
the result, is much more elegant ...

Leave room for *EVERYONE* in amateur radio - you are welcome to your way of doing
things - but don't try to convince the world that yours is the only true path,
and don't insist that I should have to give up my CW/AM/SSB/FM, or accept interference
just so that you can find the bandwidth to play with spread spectrum.

Philip

> knowledge requirement.

In the licensing sense, yes they have Curtis. As a result of this, many broadcast stations, primarily AM *are* out of compliance. My point is that in an area where the public interest, convenience and necessity is at stake, the FCC has decided that the operator licensing requirement for these relatively high-power operations is no longer necessary. Don't argue with fact Curtis.

Where in Part 73 do you see any mention of a "de facto" knowledge standard for broadcasting. I recently finished with more than 25 years in AM/FM/TV broadcasting, and nothing could be further from the truth with regard to the competancy of the station's staff. In fact, it varies from market to market, ranging from excellent to atrocious, to absolutely no technical staff whatsoever in the case of small market AM stations. I persoanally know of *several* directional AM stations in this market alone that are non-compliant, and only employ the use of a contract engineer for emergency, "off-the-air" purposes.

> But licensing the professionals at a broadcast station did help the
> station licensees. The station owners knew that when they hired a
> licensed individual they were getting someone that had something at
> stake - The idividuals license (and "employability") was on the line if
> he was incompetent.

Absolutely. But with the elimination of the licensing requirement, the onus for regulatory compliance now rests solely with the station owner. This is nothing new, by the way. The rules pertaining to this were adopted several years ago. As a result, many engineers (my self included) have decided to find ancillary careers elsewhere.

> Eliminating most of these op license requirements was a "business" move
> by the FCC. The benefits of the FCC administering licenses for
> idviduals were not worth the hassle.

True. So for the sake of public interest, convenience and necessity, the Commission eliminated the licensing requirement. Perhaps the FCC should adopt a new phrase: "In the business interest, convenience and necessity."

> "Theory" testing is needed since amateurs are permitted to do a lot of

Neither am I, nor do I advocate the elimination of CW testing if the
preponderance of amateurs elect to retain it.

>The issue is giving up CW testing.

>Bill Sohl K2UNK
>ARRL Local Gov't Liaison, Mt. Olive Township, NJ

I don't know what we'd do without you over there in Mt. Olive Township, NJ, Bill. You are just a clarification looking for a place to happen. But, in reference to your reference to what I said, I was referring to what was originally said regarding the Coast Guard, MARS, and international coastal stations, none of which, I believe, ever had 'CW testing' in the first place, so I think you would be hard pressed to explain that KC5WCP was referring to CW 'testing'.

But now that you mention it, I think you have an excellent idea. When the Coast Guard, MARS, and international coastal stations give up CW testing, then we should too. After all, NBC, CBS, ABC, the PGA of America, the NFL and the United Nations don't have CW testing, so why the hell should ham radio have it, right Bill ?

The ARRL Letter
Vol. 15, No. 12
December 13, 1996

IN THIS EDITION:

* ARRL asks for primary allocation at 2.3 GHz
* The ARRL Letter to become electronic-only
-->How to get The ARRL Letter
* McNamara leaves FCC
* W1AW gets equipment donations
* Call sign snafu
* Multiple club station calls signs legal
* AEA finds buyer(s)
* Solar flurries
* Colvin grant to Heard DXpedition
* Mars Global Surveyor relay tests successful
* George A. Wise, W7MB, SK
* In Brief: Vanity update; Mir back on the air;
New on the ARRLWeb site; Transatlantic
anniversary; Club insurance going up; Section
Leader, SK; September QST Cover Plaque winners

ARRL AGAIN ASKS FOR PRIMARY ALLOCATION AT 2300-2305 MHZ

In comments filed in response to the FCC's plans to reallocate and auction off parts of the 2.3-GHz band for a new Wireless Communications Service (WCS), the ARRL has asked the Commission to create a primary amateur allocation in the 2300 to 2305-MHz segment and to maintain a secondary ham allocation in the 2305 to 2310-MHz band. Just before adjourning, the 104th Congress directed the FCC to reallocate 2305 to 2320 MHz and 2345 to 2360 MHz to wireless services and to assign new licenses by competitive bidding by April 15 in order to help balance the budget.

"This legislation is, in the League's experience, the first time that Congress has substituted its judgment for the expertise of the Commission with respect to the allocation of specific frequency bands," the ARRL commented, later calling the congressional action "discouraging." The FCC issued a Notice of Proposed Rulemaking (GN Docket 96-228) in November, proposing to create the WCS to occupy the affected 2.3-GHz segments.

The League said that part of the FCC's task now is "protecting incumbent users in the band," and suggested the FCC was obliged to accommodate

continued amateur use in the 2305 to 2310-MHz band and to accommodate displaced amateur operations in the 2300 to 2305-MHz segment. "These actions, taken together, will compensate for the diminution in availability of the 2305-2310-MHz band for amateur operation," the League declared in its filing. The 2300 to 2310-MHz segment now is allocated to the amateur service on a secondary basis. Weak-signal work centers around 2304 MHz. The League called sharing of the 2305 to 2310 MHz segment with other services "distinctly problematic."

"As a practical matter, it would tend to relegate amateur operation to non-metropolitan areas, away from customers of mobile service providers," the League said in its comments.

The League already had petitioned the FCC (under Docket 94-32) to upgrade the 2300 to 2305-MHz band to primary status, but the ARRL suggested in its comments on GN Docket 96-228 that the FCC upgrade the status as part of the current proceeding instead.

Noting that the amateur allocation at 2.3 GHz had been "arbitrarily winnowed down during the past ten years," the League urged the Commission to take "an affirmative step to protect what remains of the Amateur Service allocation and the important and varied amateur uses at 2300-2310 MHz, especially those centered at and near 2305 MHz."

THE ARRL LETTER TO BECOME ELECTRONIC-ONLY PUBLICATION

This marks the final printed edition of The ARRL Letter, which began publication to member subscribers in October 1982. Last January, we switched distribution of The ARRL Letter by mail from semimonthly to monthly and instituted electronic distribution of The ARRL Letter plus weekly electronic updates via the Internet, the World Wide Web and other on-line outlets, including the Netcom server. This distribution network has proven to be fast, efficient and effective. It's a terrific way to keep up with what's going on in the ham radio world every week, and it's been very popular with subscribers, so eliminating the printed version is a logical next step. But there's another, more practical aspect to our decision to end the printed, mailed version. Even on its current monthly schedule, The ARRL Letter loses about $12,000 per year, a loss which we can no longer justify in an era of belt-tightening. ARRL news--via bulletins and weekly electronic editions of The ARRL Letter--is widely available on the Internet and packet radio. In addition, modern production methods allow us to make news in QST much more timely for those who do not use the electronic information channels.

Paid subscribers to The ARRL Letter can either switch to e-mail delivery (send an e-mail message to circulation@arrl.org) or may request a credit or a refund (affected subscribers will be notified of their options by mail). Qualified subscribers who receive complimentary copies of the printed newsletter also may switch to e-mail delivery to ensure uninterrupted delivery of ARRL and ham radio news. Those currently eligible for a free subscription also will be able to get The ARRL Letter e-mailed to them for free upon request. All others can access The ARRL Letter on the ARRLWeb page (http://www.arrl.org), CompuServe, America Online, Netcom and other sources

(see the sidebar, "How to Get The ARRL Letter").

We regret any inconvenience this change might cause to our print-version subscribers, but we see this as a necessary cost-saving measure and as a way to take maximum advantage of our internal resources and of electronic delivery, that has proven itself to be the best-available--and certainly the fastest--delivery system.--Rick Lindquist, N1RL

-->How to Get The ARRL Letter,<--

For members and nonmembers alike, The ARRL Letter is available free-of-charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltr<mmdd>.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

McNAMARA TO LEAVE FCC

FCC Private Wireless Division Chief Robert McNamara, N1KHF, says he's leaving the FCC December 13 to take a position with Nextel Communications Inc, a major telecommunications service supplier. "I certainly am sad to go," said McNamara, who called his colleagues "a great group of people to work with."

A Massachusetts native, McNamara, 51, said he was taking advantage of an "opportunity that came along." He'll work in the office of Nextel's general counsel. "It's been an interesting tenure," he remarked of his 21 years at the FCC. He's been in his present position for the past two years. Before that, he headed the Private Wireless Division's predecessor, the Special Services Division within the former Private Radio Bureau--now the Wireless Telecommunications Bureau.

Deputy Private Wireless Division Chief David Horowitz will become acting chief of the Private Wireless Division upon McNamara's departure.

The Private Wireless Division is the part of the Wireless Telecommunications Bureau that regulates Amateur Radio as well as matters concerning public

safety, industrial, transportation and other private radio services, aviation, marine, IVDS, broadcast auxiliary service, personal radio services, point-to-point microwave, antenna tower clearance, and the radio operator examination program.

McNamara said that ham radio enjoys a lot of respect and recognition at the FCC, but he also suggested that hams keep up on spectrum issues in the future. "Spectrum is the key issue, something the amateur community should pay close attention to," he said. But McNamara said he does not expect a repeat performance of the move by the 104th Congress that ordered the FCC to reallocate 2305 to 2320 MHz and 2345 to 2360 MHz and auction it off to wireless services by April 15 in order to help balance the budget. "I'd be surprised if there's a lot of that in the future," he said.

McNamara also said he thinks the vanity call sign program has been successful, despite a few glitches. He said the FCC tried to be responsive to hams and do "what the amateur community and the League agreed on."

ARRL Executive Vice President David Sumner, K1ZZ, said the League is disappointed to see McNamara leave the FCC. "Ever since Ralph Haller [N4RH] left the FCC, Bob McNamara has been our primary contact on policy matters," he said. "We're sorry the FCC is losing him." Sumner and ARRL General Counsel Chris Imlay, W3KD, met with McNamara, Horowitz and Wireless Telecommunications Bureau Chief Michelle Farquhar December 11, and they took the opportunity to wish McNamara well.

McNamara attended the ARRL National Convention in Peoria earlier this year and met with ARRL Board members there.

W1AW RECEIVES EQUIPMENT DONATIONS FROM MANUFACTURERS

Timewave was among the ham radio manufacturers recently donating equipment to the ARRL Maxim Memorial Station, W1AW. Timewave's Al Caplan, W0RIC, showed up in person to donate a DSP-59Y plug-in DSP module, designed to be installed in a Yaesu speaker cabinet. W1AW also has recently received equipment donations from Alinco (a DX-70TH HF/6-meter transceiver, a DR-605T VHF/UHF FM mobile transceiver, and an EMS-14 desk mike); Yaesu (a G-5400B az/el satellite antenna rotator, for an installation going up next spring); and L. L. Grace (a Kansas City Tracker with Doppler shift tuning option). W1AW Station Manager Joe Carcia, NJ1Q, expressed "deepest appreciation" to all of the manufacturers who have donated equipment to W1AW. (The ARRL is a tax-exempt, not-for-profit organization as described in Section 501(c)(3) of the Internal Revenue Code. Voluntary donations are tax-deductible to the extent provided by law.)

CALL SIGN SNAFU AT FCC AFFECTS NEW HAMS

Imagine you've just passed your licensing examination and your new ticket finally arrives in the mail bearing your brand-new call sign. Maybe you even order a batch of new QSL cards. Then, you get on the air only to learn that your brand-new call sign isn't your call sign after all, because the FCC already had issued it to someone else!

In fact, in some cases during mid to late October, the FCC's computers apparently issued the same call sign to several individuals at different times. In a way, it's been a game of musical chairs, but one where the last person to be assigned the call sign gets to keep it. Among those affected were Louise Williams, KF4MTE, and John Lake, KF4MTC, both of Newberry, South Carolina, and George Merchant, KF4MTD, of Joanna, South Carolina. Williams first was issued KF4MTO. A check of the FCC transaction records indicates that KF4MTO was a busy call sign, having first been assigned Williams on October 23, then reassigned on October 30 to another YL in North Carolina before ending up with its "rightful" owner, yet another YL in Tennessee on November 2. Williams was issued KF4MTE on the same date, but not before the call sign had briefly been assigned first to different individuals in Florida, also on October 23 and October 30, respectively. Lake's and Merchant's call signs had similar histories, and they, in turn, had first received other call signs on their new licenses.

The FCC discovered the problem in late October. Commission personnel were wrestling with computer-related problems for about a week during late October and early November, just prior to issuing the first Gate 2 vanity call signs on November 4. All of those affected appear to be first-time licensees.

"The incorrect licenses were not supposed to be mailed out, but somehow, they were mailed out," said a spokesman at the FCC's Gettysburg, Pennsylvania, office. He said he had "no idea" how many licensees were affected, but he believes the FCC's current database has been corrected so that no call sign has multiple holders. But some people affected might not have gotten the word yet. "The correct licenses might not have been mailed out, so they might be holding a license with the wrong call sign," he conceded. "We're going to try and see which ones didn't get mailed out." He emphasized that the call sign in the current FCC database is the correct call sign. Gettysburg personnel were looking into the reasons for the irregularity with an eye toward making sure it doesn't happen again, he said.

MULTIPLE CLUB STATION CALL SIGNS ALL LEGAL

The assignment of multiple club station call signs to the same clubs--some of which may exist only on paper--is perfectly legal according to a staff member in the FCC's Private Wireless Division. However, the practice--which has become more prevalent and obvious during the issuance of Gate 2 vanity call signs in November--has raised the hackles of some hams. A California ham wrote the ARRL expressing his concern that the multiple applications were "clearly in violation of the spirit" of the vanity call sign program, and a New York ham asserted that "club calls should be for real clubs, not imaginary ones." Both hams decried the issuance of 23 club station call signs issued to members of one family in California.

The FCC spokesman said, however, that there's nothing in the current regulations to prevent any club from holding several different call signs, nor is there anything to prevent the trustee of those licenses from taking advantage of the vanity call sign program--provided the trustee is willing to put up the $30 per application.

AEA FINDS BUYERS FOR ITS PRODUCT LINES

Advanced Electronic Applications Inc is being sold--piecemeal. AEA Chairman Mike Lamb, N7ML, announced December 10 that AEA will sell each of its three product lines (data products, test analyzers and antennas) to three separate buyers. Letters of intent are in place and agreements are in the drafting stage, according to Lamb, who already had laid off most of the staff at the company's Lynnwood, Washington, headquarters earlier this fall.

Lamb assumed daily control over AEA earlier this year following the sudden departure of former AEA President Rod Proctor, KI7ZI. Subsequently, the company introduced several new products (including the long-awaited DSP-232 multimode TNC) to the amateur market, but it appears to have been a case of too little, too late. As of late November, AEA was just barely in business, and telephone callers were being told to contact ARRL "in about a month" for information regarding service arrangements.

The ARRL was not aware that it would be listed by AEA as a contact point, and those seeking customer service should not contact the ARRL to request it. The League cannot help AEA customers with service or technical problems.

Lamb said this week that because of the intervening holidays, he didn't anticipate the sales would be consummated until early January. He said the new owners "will likely offer warranty and out-of-warranty service to old AEA customers." While he declined to reveal the names of the prospective new owners, Lamb said that at least one of the companies was already in the ham radio business "with a very good reputation." He also would not say whether the AEA name would survive the buyouts, but said he expected the new owners would maintain AEA's standards.

Lamb said an official announcement on the buyouts would be made "as soon as the sales are complete."

SOLAR FLURRIES

Solar seer Tad Cook, KT7H, in Seattle, Washington, reports: Solar flux has still been moving off the recent flurry of activity caused by region 7999. More activity wasn't expected until this region returned and solar flux rose after December 17, but it looks as if we are seeing increased activity a bit early as the flux rises in the past couple of days. Average sunspot numbers were down about 8 points compared to last week, solar flux was down over 11 points, and the average A index was up about 1.7 points.

The projection from the NOAA Space Environment Center a few days ago says the flux should rise again and peak around 94 right around Christmas, and geomagnetic conditions are expected to remain quiet.

Paul, 5X4F/5Z4FO, writes this week about 10-meter openings from Arua in the northwest corner of Uganda. "I have had two 10-meter openings into the US from here since July 1995." He said the first was October 30, 1995, when 24 East Coast stations were worked between 1744 and 1832 UTC. The second was during the CQWW CW contest on November 24, 1996, when 17 East Coast stations were worked between 1447 and 1535 UTC. "The last opening corresponds to the high solar activity on that day," he said. Paul mentions the ARRL 10-Meter

Contest this weekend, and he says that he made 53 contacts in the 1994 contest and 95 in 1995.

Alan, NS0B, says he believes the solar minimum already has occurred, based upon his analysis of moving averages of solar flux and sunspot numbers. He does a smoothed 365-day running average and says that the solar flux bottomed out between May 15 and May 23, and has been rising since, while the bottom for sunspot numbers was during the same period around May 19. Based on this observation he says that the recent solar cycle has been one of the shorter ones at 9 years, 8 months.

Sunspot numbers for December 5 through 11 were 0, 0, 12, 13, 20, 17 and 31, respectively, with a mean of 13.3. The 10.7-cm flux was 69.6, 69.7, 69.2, 68.6, 73.7, 72.4 and 77.6, respectively, with a mean of 71.5. The planetary A indices for the same period were 2, 1, 4, 3, 7, 18, and 10, respectively, with a mean of 6.4.

ARRL COLVIN GRANT TO HEARD ISLAND DXPEDITION

The ARRL Colvin Award Grants Committee has authorized a grant of $5000 to the 1997 Heard Island DXpedition. The DXpedition team, operating as VK0IR, hopes to activate this rarely visited, remote location during January and February 1997. Heard Island, a territory of Australia, is located in the South Indian Ocean. The team says its activities will involve natural science research (specifically, a study of cryptofauna) as well as ham radio operations and "radio science." The cost of the entire expedition has been estimated at $320,000.

The DXpedition will cover five weeks in January and February. The team is scheduled to depart Reunion Island on January 3, 1997, and return on February 5. Approximately two weeks will be spent on Heard Island, and brief visits to Crozet and Kerguelen Islands also are planned. A team of 20 hams, supported by about a dozen others, has been assembled for the expedition.

The Colvin Award is conferred by the League in the form of grants in support of Amateur Radio projects that promote international goodwill in the field of DX. It is funded by income from an endowment established by the late Lloyd Colvin, W6KG.

The Heard Island grant is the second Colvin Award to be bestowed by the ARRL. The first was made earlier in 1996 to the organizers of the World Radiosport Team Championship (WRTC). For more information on the Heard Island DXpedition, set your browser to http://www.ccnet.com/~cordell/HI/ on the World Wide Web.

MARS GLOBAL SURVEYOR RELAY TEST A SUCCESS

The Mars Global Surveyor relay test in late November was a tremendous success (see "DXing enroute to the Red Planet," QST, Jan 1996). The MGS was launched on November 7 from Cape Canaveral, Florida. By the time the relay test arrived, the MGS was 3.1 million miles from Earth. For several hours, the spacecraft sent a steady carrier of 1.3 W at 437.1 MHz into a near-isotropic antenna. Many amateurs around the world participated in

trying to detect the extremely weak signal, a lot of them successfully using the AF9Y FFTDSP program. On his Web page (http://www.webcom.com/af9y), Mike Cook, AF9Y, of Huntertown, Indiana, displays the FFTDSP spectrograms of MGS for the initial CW Mode at 1413 UTC on November 25, 1996, using two 5-foot helix antennas. He reports that his receiver was set so that 800 Hz on the FFTDSP screen corresponded to 437.09551 MHz--which was estimated to be the receive frequency at the start of CW mode. MGS actually was detected 180 Hz lower, at 980 Hz (Cook says that in CW mode, the receiver will shift the FFTDSP trace to the right as the receive signal moves down). AF9Y says the signal level dropped below detection for 45 minutes during the worst-gain period of the spacecraft's rotation.

At the station of Darrel Emerson, AA7FV, in Tucson, Arizona, the approach was to try very high frequency resolution to pull the signal out of the noise, allowing for changing Doppler shift from the heliocentric orbital motion of the Mars Relay transmitter. Using a stable reference tone injected into the receiver passband to measure--and then compensate for--receiver phase and frequency drift, a resolution of 0.013 Hz was achieved. The signal width measured from the MGS with this system was 0.0175 Hz, yielding a signal-to-noise ratio of 19 dB from a single 15-element Yagi. Emerson summarized some of his results on http://ourworld.compuserve.com/homepages/demerson/marsspec.htm. Emerson reports heavy Internet use during the test to communicate among participants and for the control station at the Stanford dish to update the spacecraft's status.

"It was quite an exhilarating, but exhausting, event for all those who took part," Emerson said in thanking those at Jet Propulsion Lab (JPL) and Stanford University "who made it all possible."--SpaceNews

GEORGE A. WISE, W7MB, SK

DXCC Honor Roll DXer George Wise, W7MB, of Portland, Oregon, died December 10. He was 76. Wise was charter member No. 1 of the Willamette Valley Amateur Radio Club. Bob Wruble, W7GG, reports that Wise achieved the first five-band DXCC and 160-meter DXCC awards in the seventh call district. A memorial service was set for December 14 at Kern Park Christian Church in Portland, Oregon. His wife, Helen, W7RVM, is among the survivors.--Bob Wruble, W7GG

In Brief:

* Vanity update: The FCC in Gettysburg reports it received another 405 vanity call sign applications between November 26 and December 4, 226 of them filed electronically. Gettysburg personnel now have processed vanity applications received through October 31. The ARRL estimates the FCC backlog as of December 4 at approximately 1600 applications. No date has been announced for the opening of Gate 3. The FCC also reminds hams filing for modifications and renewals to include a ZIP code to avoid delays.

* Mir back on the air: The Mir crew reported early this week that during a space walk, crew members repaired an antenna problem that had disabled the spacecraft's ham radio setup. The antenna apparently was damaged during an earlier space walk.--Dave Larsen, N6JLH

* New on the ARRLWeb site! Now you can use the ARRLWeb page to search for clubs and examination sites. The ARRL Affiliated Clubs page lets you search for affiliated clubs based on state, ZIP Code (you can search within 20, 50 or 100 miles of the ZIP Code you select) or ARRL section. The ARRL Exam Session Search lets you find exam sessions by state or ZIP Code (you can search within 20, 50 or 100 miles of the ZIP Code you select). You can even find US ham radio test sessions in other countries (We found three sessions listed for Japan--Ed). Click on Clubs or Exams on the ARRLWeb page, or, to get right to the club search, set your browser to http://www.arrl.org/field/club/clubsearch.phtml. The exam search engine is at http://www.arrl.org/arrlvec/examsearch.phtml.

* Transatlantic anniversary: December 11 marks the 75th anniversary of the first shortwave transatlantic radio transmission, sent from Greenwich, Connecticut, to an American amateur in Ardrossan, Scotland, back in 1921 (see QST, Dec 1996, page 30, for details). The US station, 1BCG, was owned by Minton Cronkhite. In Scotland, Paul Godley, 2ZE, copied a message sent by 1BCG. A commemorative W1BCG operation, using a replica of the 1921 transmitter, continues through December 15 in the vicinity of 1815 kHz in the 160-meter band (as close as practical to the original frequency, which was 1350 kHz--in the present-day standard broadcast band).

* Club insurance going up: Albert H. Wohlers & Co of Park Ridge, Illinois, which administers the ARRL ham radio and club liability insurance plan, has raised the minimum premium for the ARRL Club Liability Insurance to $325 per year. This will represent an increase for many clubs. Wohlers also notes that the ARRL ham radio equipment insurance plan for individual stations covers all losses. The company says it's paid out $2.4 million on 2700 claims over the past five years, the majority of the claims resulting from lightning damage and theft. For more information, contact Wohlers at 800-323-2106; fax 847-803-4649; e-mail cusv@ahw.com.

* Section Leader, SK: The ARRL Field Services Department has discontinued the Section Leader newsletter as of the December 1996 issue. A new, quarterly newsletter for ARRL Affiliated Clubs, The ARRL Club Companion, will appear after the first of the year. The quarterly Field Forum will include articles that would have appeared in Section Leader. First published in 1985, Section Leader was distributed to section managers and their appointees.

* September QST Cover Plaque winners: Edward Kennedy, K3NS, and John Heckscher, were the winners of the September 1996 QST Cover Plaque Award for their article "The High Frequency Active Auroral Research Program."

>CW transmitter ... how sad and pathetic ...

Hey, that'd be fun! How about providing a quick ASCII sketch of such a transmitter!!

Think of building CW gear as the first step up a long ladder of homebrewing. Removing that first rung means only those with a long stride will be the ones able to climb that ladder.

When one has built a radio and used it to work stations thousands of miles away, it gives that person such a strong sense of accomplishment that they will continue into a lifetime of building.

>Try to put aside your fears of the "complicated" and unknown ... only in
>that way will you ever discover the "real" ham radio ...

Real ham radio is whatever niche we have found and enjoy.

Jeff KH2PZ / KH6

P.S. Please remember that our pasttime is called Amateur Radio, not Profession Radio. Whatever our level of expertise, most of us have had to get their on our own without help from college classes.

I never thought you were naything other than technically qualified
(I have read enough of your posts ... :-)

I have no problem at all with appropriate use of any technology.
Digital techniques (DESP etc) have their place they are, for example
an effective aid to pulling weak signals out of noise. But you don't
need
DSP on your HT for a local repeater contact - although some "people"
would have you believe that. That is the sort of thing which scares
newbies off.

I think we agree here ... but I *might* want to include some people who
do know what they are talking about, who overstate the importance or
relevance
of some technology to ham radio.

> >Leave room for *EVERYONE* in amateur radio - you are welcome to your way

Again, I think we agree.
My first ham radio exam was done in England at the time when it was
a *written* examination (written in this context does not include
multiple choice !). I actually thought that that was a reasonably
pitched examination, which required a demonstrated understanding of
the principles and their application to amateur radio. The pass mark
was set low enough so that anyone did a bit of homework could pass, but
to safely pass, you needed to understand.

CW is really a red herring - and has been so for the last 30 years or
so.

> irresponsible in printing it ...

I know enough to realise that the two can co-exist.
The problem that I see is not the co-existence for medium and high
signal strengths,
it is that to a (shall we say "conventional") receiver, a spread
spectrum transmission
appears only to raise the noise floor a *tiny amount*.

Do we agree so far ?

Assuming yes ... now that is probably fine. But what about several
thousand
simultaneous transmissions ? Each raising the noise floor "just a bit"
-- well
lots of "just a bits" can add up to something significant. Particularly
once you
start getting some of the less technically knowlegable playing - and
they discover
that error rates decrease markedly if you hook up a wideband 1.5Kw amp !

Keeping the DX/EME/Satellite windows clean may not be so easy.

There is an appropriate use for all of the different communication modes
available to amateurs (including spread spectrum), the appropriate uses
even overlap.
But as with many things, fashion pushes people into doing inapproriate
things, and
thinking in inappropriate ways.

I do agree that a bit of technical competence helps to prevent this.
But hoping for too much in this area is just wishfull thinking.

Philip

Another 90's welfare attitude...I *can't* learn the code so I demand you
give me the privileges... sheesh!
If you got a college degree say an EE, I'll bet you took a course or two
in economics, literature etc...part of the REQUIREMENTS!. I will never
know why I had to know chemistry for a CompSci degree but I did it.

> ><snip>
>
<SNIP>

> Or letters of statement of the situation. Protesting causes arrogance.

HUH? you don't have any intention of doing anything involving history
either do you? otherwise you'd learn. Hint Hint... I don't agree with
either of them but I do admire them... ML King and Ghandi to take two
easy examples.

>

> ouur rights. The nation may not get past 2000 with the attitude that

You bet! bigtime my rights are important to me and I have the right to
exercise them only to the extent that they do not infringe on other
person's rights (or agency's). Important enough to have actually
been in the military,something you apparently missed.

> your privilege is more important than someone else's rights.
> How you determine that I am a panty waist by my statements eludes me.
> Perhaps you could elaborate on my panty waistdom and why you feel that
> way about a person you have never met.

OK, I used the word, here's MY definition:
Pantywaist: one who will not or can not defend their rights or step up
in defense of themselves.

I will agree when someone says an amateur license is a privilege.
HOWEVER
concomittant with the privilege, I have obligations to the FCC for that
privilege, and I have some RIGHTS conferred by the FCC also. One is
where
a band is set up for the exclusive use of a particular group...ham,
general broadcast, tv OH and by the way the various government agencies
have allocations just like us (some shared and some exclusive) that they
are entitled to, just like hams. (this of course exempts national
emergency and wartime) then they have to obey the rules JUST LIKE US.
And that means they stay in their bands also.
A pantywaist is afraid to defend themself in fear of what the other
person(agency) MIGHT do in retaliation.

This is probably lost on you. but Those of us who *have* defended our
country, and have paid our dues know more about defending our rights
than you obviously do, and also more about what our 'rights' actually
are.

<MAJOR BANDWIDTH SNIP>
> >Stan KF0NC
> Who believes that we should thumb our noses at people who are doing a
> serious job protecting our way of life.

A serious job? (see the $800 toilet, the Soldiers defended in Japan for
rape chareges, the Phillipines that wanted us out for political
interferance. Then we can go on to the mid east after that)

>
> >"90% of all statistics are made up"

> KC5WCP

My tagline says it all because there are too many persons today wanting
to 'prove' a point by lying about statists, or misquoting the law or the
constitution. They don't want to (or can't) do their homework either.

A thought for today for you---
Free speech is a constitutional right, NOT a constant obligation!

> privillages.

This only makes sense under one condition: IF and ONLY IF there are separate, *regulated* sub-bands for CW operation.

Otherwise, the licenses are essentially the same, with no particular reason for anyone to pass a CW exam if they want to use CW. See what I mean? If you want to use CW, presumably you already *know* CW, so just go ahead and use it. CW is its own filter - you can't B.S. your way through it! Either you know it or you don't as far as making contact with other hams is concerned.

Once again, the above is not bad if passing a code exam gives you access to additional frequencies in the HF bands. Otherwise, the "+" classes will cease to be relevant.

It's not a bad analogy, and I would actually like to see code become a closer analog to the foreign language requirement in school. The big difference here is that foreign language does not constitute 35% of the high school curriculum! As a requirement, Morse code should be at most a breadth course, not a double major.

>The beauty of ham radio is that there is

>communications; there's room for electronics technicians; there's room
>for people who can do arithmetic but could never get the hang
>of algebra very well. There's room for people who don't want to pass
>the CW test.

Yes, room at the back of the bus (Cec) for those who are not native CWans. Agreed about the beauty in diversity. The irony in amateur radio lies in the fact that an operator can have passed all the written elements thru 4B and be denied even the minimal privileges afforded to an operator who has only been able to pass lowly written element 2. This is a tremendous inequity, and does not make sense. The relative importance to CW in qualifying operators is weighted far too heavily toward the non-technical operator, and against the technical types.

There could just as easily be two optional routes. If the intent is allow non-technical types in by letting them pass something THEY can do without having to know all that "theory stuff", it seems reasonable to allow the technical types in by letting them demonstrate the things they excell at. This would effectively balance the current bias toward the non-technical aptitudes.

Say you've got to assemble a small team of 5 to put up the club 3C Field Day station. The guys and YLs are all lined up. You've got some 35 WPM Novices and you've got some real antenna experts who can build a transmitter out of sticky tape and paper clips but haven't worked CW

since the exam (or perhaps never at all). Who ya gonna pick? What skills are really most important to getting the station on the air?

Unfortunately this is an unfair way to make judgements about people and their qualifications, but it's not totally unlike our code requirement.

>There's room for people who don't know what a z-transform
>is and who therefore cannot design digital filters.

This is an outrage!! ;-)

To all radio amateurs

SB QST ARL ARLB092
ARLB092 ARRL Colvin grant to Heard Island DXpedition

The ARRL Colvin Award Grants Committee has authorized a grant of
5000 dollar(s) to the 1997 Heard Island DXpedition. The DXpedition team,
operating as VK0IR, hopes to activate this rarely visited, remote
location during January and February 1997. Heard Island, a
territory of Australia, is located in the South Indian Ocean. The
team says its activities will involve natural science research
(specifically, a study of cryptofauna) as well as ham radio
operations and ''radio science.'' The cost of the entire expedition
has been estimated at 320,000 dollar(s).

The DXpedition will cover five weeks in January and February. The
team is scheduled to depart Reunion Island on January 3, 1997, and
return on February 5. Approximately two weeks will be spent on
Heard Island, and brief visits to Crozet and Kerguelen Islands also
are planned. A team of 20 hams, supported by about a dozen others,
has been assembled for the expedition.

The Colvin Award is conferred by the League in the form of grants in
support of Amateur Radio projects that promote international
goodwill in the field of DX. It is funded by income from an
endowment established by the late Lloyd Colvin, W6KG.

The Heard Island grant is the second Colvin Award to be bestowed by
the ARRL. The first was made earlier in 1996 to the organizers of
the World Radiosport Team Championship (WRTC). For more information
on the Heard Island DXpedition, set your browser to

>Or someone did and they were ignored.

Actually, most instances of USCG stations coming up on amateur
frequencies involve SAR cases. The international regs kick in here.
Bringing the USCG transmitters up on the amateur bands just for the fun
of it and operating under USCG call signs would be a definite Coast Guard
No-No!

And how many hams do you know who actually have enough knowledge to
construct a CW transceiver?
(remember, you need both sides) My opinion is that if the EMP were
strong enough to destroy
electronic equipment, the people around them wouldn't be in much better
shape. Considering all the _modern_ means of communicating, I doubt
that CW would play a major role today.

> emergency.

If being of service in an emergency is really what you want hams to be,
I think it would be
more prudent to train them in First Aid, CPR, storm spotting, etc.

Carl,

With all of your manners and tact, you strike me as the type who gets punched often in neighborhood pubs. Your "many of us feel..." comment about Dave Sumner is uncalled for. Have you ever met him? Whether or not you have, why make such a rude comment if not simply to fan the flames?

I also notice that when I pulled up 150 posts on the group, yours accounted for 32 of 'em.

Dave Heil OH2/K8MN

P.S. Have you been lurking on alt.Dave.Sumner? Where do you get the "many of us" line?

Here's Juan's post in regular text format:

A HAM'S CHRISTMAS EVE

'Twas the night before Christmas and in the ham shack,
Was the warm glow of tubes in the transmitting rack.

The log book was brought up to date with great care,
In case the FCC might some day be there.

XYL and Harmonics were snug in their beds,
My strong RF waves safely from their heads.

I plugged in the mike and adjusted the VFO,
Getting all set for a late night QSO.

When up from the F layer there arose such a clatter,
I looked to the window to see what was the matter.

Then up on the roof by the forty meter beam,
There came QRM like a heterodyne scream.

On Icom, on Kenwood, on Yaesu and Ten-Tec,
On Alinco, on Collins, on Astron and Cushcraft.

Bias to the grid and volts to the plate,
Just watch the S-Meter while we all modulate.

As I turned to the rig and reached for the dial,
From the twin lead antenna Santa slid with a smile.

An RF choke he held tight in his teeth,
And coax encircling his head like a wreath.

A bundle of ham gear hung from his hand,
Was that MY name on a new dual band?

He had a snub nose like an egg insulator,
And his cheeks glowed bright red like a hot oscillator.

He spoke not a word but went straight to his work,
Laying out all the gear, then turned with a jerk.

And laying a wave meter along side of his nose,
Said, "Please QSL." and up the feeders he 'rose.

He climbed up the dipole, to his team gave a whistle,
And away they all flew like a jet propelled missile.

But I heard his last signal from the ionosphere,
Seventy Three, Eighty Eight, and Merry Christmas...I'm clear.

By Robert Shafer W9SVL (A Silent Key)
Retold by WA9UXP
Modifications to this version by Bruce, N6TFS (December 1992)

Enjoy, I found it last Christmas (1995) and thought I'd share it this year.

73 to all, N7RCM...Juan in Las Vegas

[Best wishes also from AC6VV, John in Los Angeles]

But, don't forget that among the stories of 3 headed alians giving birth to 6 headed snakes on the moon, there are also some true stories. I remember the story of john bobbit who had his jimmy cut off by his wife being on the front page, and guess what, I opened it up, and the story was accurate! I was as shocked as you probably are now, but it was accurate. So while 99% of the garbage in there is false, sometimes it is right. sometimes truth really IS stranger than fiction.

We laugh at honor, and are shocked to find traitors in our midst.

Been trying to tell these guys that the military just can't spin the
dial and decide to start talking there. Has to be almost wartime to do
that. As far as the coast guard on 20 if it was an emergency then I
don't have a problem with that but if they did it just to do it then I
have a problem with that. The military has specific freqs that is uses
and has to abide by them. For instance the 6m band is inside the
military's vhf band radio and I have seen sometimes where we had a
freq or two in there but that is only temporary as you know. As far as
hf radios I worked on many that would cover from 160-10 meters and
never did I see someone transmitting where they felt like it. We had
frequency assignments and stuck to them.

Nope. Read what you just wrote. Vessel in distress. FCC rules say that
in time of life and death you may use any freq at your disposal. What
I have been saying all along is that they may not key up just for the
hell of it on the ham bands.

Thanks Tom, for the reference, actually 7.15.1-7.15.3 seem to apply to
this thread. I printed it out and read it several times.
I would like to suggest that Eric (KC5WCP) actually read(and
understand)
it although it's unlikely, 'technician and proud of it' indeed! if his
code ability has any relationship to his reading ability, there may be
too many big words.
However, the meaning and the intent of the law are pretty clear for
anyone that is willing to expend the effort.

From ARRL Headquarters
Newington CT December 13, 1996
To all radio amateurs

SB QST ARL ARLB093
ARLB093 Vanity call sign update

From the time it began issuing Gate 2 vanity call signs on November 4, 1996, and through December 11, the FCC in Gettysburg cranked out an estimated 5700 new vanity call signs. That number includes all Gate 1, Gate 1a, and Gate 2 applications it received on or after September 23, the opening day for Gate 2. As of December 11, the FCC had processed all applications received through the end of October. Approximately 175 of the applications processed still require special handling, in some cases because the FCC was unable to grant any of the applicant*s call sign requests.

The ARRL estimates that as many as 2000 applications remained in the processing queue as of December 11.

Gettysburg received another 405 vanity call sign applications between November 26 and December 4, 226 of them filed electronically. No date has been announced for the opening of Gate 3.

To avoid surprises--especially when filing via the electronic on-line Form 610V--the ARRL advises all vanity applicants to confirm that the application fee has been received and deposited by Mellon Bank, the FCC's fiscal agent, or that your credit card account has been debited.

The FCC reminds hams filing for modifications and renewals to include a ZIP code to avoid delays.

To all radio amateurs

SB PROP ARL ARLP052
ARLP052 Propagation de KT7H

Solar flux has still been moving off of the recent flurry of activity caused by region 7999. More activity wasn't expected until this region returned and solar flux rose after December 17, but it looks as if we are seeing increased activity a bit early as the flux rises in the past couple of days.

Average sunspot numbers were down about 8 points compared to last week, solar flux was down over 11 points, and the average A index was up about 1.7 points.

The projection from NOAA SESC from a few days ago says the flux should rise again and peak around 94 right around Christmas, and geomagnetic conditions are expected to remain quiet.

Paul 5X4F/5Z4FO writes this week about 10 meter openings from Arua in the northwest corner of Uganda.

''I have had two 10 meter openings into the US from here since July 1995. The first was 30 Oct. 1995 when 24 East Coast stations were worked between 1744 and 1832 UTC. The second one was during the CQWW CW contest on 24 Nov. 1996 when 17 East Coast stations were worked between 1447 and 1535 UTC. The last opening corresponds to the high solar activity on that day.''

Paul mentions the ARRL 10 meter contest coming this weekend, and says that he made 53 contacts in the 1994 contest and 95 in 1995.

NS0B wrote this week that he believes the solar minimum as already occurred, based upon his analysis of moving averages of solar flux and sunspot number. He does a smoothed 365 day running average and says that the solar flux bottomed out between May 15 and 23, and has been rising since, while the bottom for sunspot numbers is during the same period around May 19. Based on this observation he says

that the recent solar cycle has been one of the shorter ones at 9 years, 8 months.

Sunspot Numbers for December 5 through 11 were 0, 0, 12, 13, 20, 17 and 31, with a mean of 13.3. 10.7 cm flux was 69.6, 69.7, 69.2, 68.6, 73.7, 72.4 and 77.6, with a mean of 71.5. Planetary A indices for the same period were 2, 1, 4, 3, 7, 18, and 10, with a mean of 6.4.

ZCZC AG74
QST de W1AW
ARRL Bulletin 94 ARLB094
From ARRL Headquarters
Newington CT December 13, 1996
To all radio amateurs

SB QST ARL ARLB094
ARLB094 ARRL again asks for primary allocation at 2300-2305 MHz

In comments filed in response to the FCC's plans to reallocate and auction off parts of the 2.3-GHz band for a new Wireless Communications Service (WCS), the ARRL has asked the Commission to create a primary amateur allocation in the 2300 to 2305-MHz segment and to maintain a secondary ham allocation in the 2305 to 2310-MHz band. Just before adjourning, the 104th Congress directed the FCC to reallocate 2305 to 2320 MHz and 2345 to 2360 MHz to wireless services and to assign new licenses by competitive bidding by April 15 in order to help balance the budget.

''This legislation is, in the League's experience, the first time that Congress has substituted its judgment for the expertise of the Commission with respect to the allocation of specific frequency bands,'' the ARRL commented, later calling the congressional action ''discouraging.'' The FCC issued a Notice of Proposed Rulemaking (GN Docket 96-228) in November, proposing to create the WCS to occupy the affected 2.3-GHz segments.

The League said that part of the FCC's task now is ''protecting incumbent users in the band,'' and suggested the FCC was obliged to accommodate continued amateur use in the 2305 to 2310-MHz band and to accommodate displaced amateur operations in the 2300 to 2305-MHz segment. ''These actions, taken together, will compensate for the diminution in availability of the 2305-2310-MHz band for amateur operation,'' the League declared in its filing. The 2300 to 2310-MHz segment now is allocated to the amateur service on a secondary basis. Weak-signal work centers around 2304 MHz. The League called sharing of the 2305 to 2310 MHz segment with other services ''distinctly problematic.''

''As a practical matter, it would tend to relegate amateur operation to non-metropolitan areas, away from customers of mobile service

providers,'' the League said in its comments.

The League already had petitioned the FCC (under Docket 94-32) to upgrade the 2300 to 2305 MHz band to primary status, but the ARRL suggested in its comments on GN Docket 96-228 that the FCC upgrade the status as part of the current proceeding instead.

Noting that the amateur allocation at 2.3 GHz had been ''arbitrarily winnowed down during the past ten years,'' the League urged the Commission to take ''an affirmative step to protect what remains of the Amateur Service allocation and the important and varied amateur uses at 2300-2310 MHz, especially those centered at and near 2304 MHz.''

SB SPCL ARL ARLX019
ARLX019 Transatlantic anniversary

December 11 marked the 75th anniversary of the first shortwave transatlantic radio transmission, sent from Greenwich, Connecticut, to an American amateur in Ardrossan, Scotland, in 1921 (see QST, Dec 1996, page 30, for details).The US station, 1BCG, was owned by Minton Cronkhite. In Scotland, Paul Godley, 2ZE, copied a message sent by 1BCG.

A commemorative W1BCG operation, using a replica of the 1921 transmitter, continues through December 15 in the vicinity of 1815 kHz in the 160-meter band (as close as practical to the original frequency, which was 1350 kHz--in the present-day standard broadcast band).

The RSGB reports that, on the other side of the Atlantic, members of the Yeovil Amateur Radio Club used restored and replica 1920s receivers this week to pick up the signal from W1BCG.

No one said they did this for the hell of it. I never heard the comms,
but we can assume that since there was a SAM mission involved the op
considered the situation important enough to warrant intrusion. Maybe
even for national security. who knows. But why do we have to assume
they were just foolin around and start barking at the op like she
didn't know her ass from her elbow?
The plane could have been in distress, lost, or in need of immediate
comms for national security.The bozos that were getting the way could
have started a war, killed an important military officer, or jammed
seriously need comms for that flight. How do they know the op was just
dicking with them?

For the last time Carl

(1) you can't defame something that it never existed, IE: your character
or integrity

(2) it's no slander, as slander is spoken words, not typed as we have
here. If anything it would be libel (or liable as one paralegal puts it)

(3) as far as your tolerating anything..as you say who cares

(4) check the definiton of the word "opinion".

Been looking for an easy, inexpensive ($13.90 single quantity) way to connect your hobby to your

PC? Then please read on!

E-LAB Digital Engineering, Inc. announces the release of their new

EDE300 Interface IC. It allows for convenient flow of data either from a

PC ot too a PC via the serial port. Our datasheet even provides

software examples for use with a PC. NOW IS THE PERFECT OPPORTUNITY TO
INTEGRATE YOUR PC INTO YOUR ELECTRONICS PROJECTS!

Our datasheet is available in electronic format via our webpage at

http://www.netins.net/showcase/elab or contact us directly at

elab@netins.net and include your postal mailing address.

In addition, we will do our best to get you up and running when using

the EDE300, even if your electronics experience is limited.

Todd Peterson

E-LAB Digital Engineering, Inc.

(712) 944-5344

Serious dealer inquiries are welcomed as well.

>Well, you are welcome to whatever turns you on.
>I too like toys, but HDTV would just be buying off the shelf equipment
>and plumbing it together. So you produce an HDTV station - well ... like
>WOW !

Off the shelf HDTV? What ham radio store are you going to? The
monitors are available for computers -- that's half the problem. But making
a radio link that can fill up a SVGA monitor is no easy job. The fact that
no one on ham radio is doing it now, that I'm aware of, means that the
person who does it will be first. And this means that even they buy lots
of the parts, they're going to run into all kinds of weird problems.

>Current virtual reality systems are bandwidth limited with fiber optic
>links.
>Wanting anything other than a pale imitation in available bandwidth is
>probably
>wishful thinking.

Ham radio has, at least until the gov' takes it away for non-use, lots of
unused bandwidth. And, I don't want 'current virtual reality', I want
a NEW virtual reality system. If you ask me, with 10Ghz horn on a 30
foot pole in Berkeley, and another 100 people in the Bay area with the same
setup, you could have one way cool multi-user VR system. It just takes
a whole lot of work to make it happen.

>I have no objections at all to you doing it so long as you don't insist
>this is the new CW, this is what ham radio is all about, and the rest of
>us low tech cabbage growers just clear off the air to make room for your
>HDTV station ....

Well, as a matter of fact, I do insist that the cutting edge technology
is the new CW -- in the way the CW was the new spark back in the old days.
And, I don't think it's all that unreasonable to believe that technology is
a very large hunk of what ham radio is about. I mean really, if I wanted
low tech, I'd take up quilting or something like that. This is ham radio
after all -- Ohm's Law filters out most of the folk with no interest
in technology.

(Though there are some situations today where CW is technically interesting. Like,
where you're interested in the propagation and the mode isn't significant.
Or, perhaps, machine comprehension of CW, perhaps coherent CW and the like.)

And no, I don't have any intention of taking the bottom 25khz of 40 meters
away. Is that what this is about? Are you defending your spectrum?

What scares me more is that the microwave bands are going to get traded or
shared away in exchange for another 50khz at 20 meters. What worries me is

that the future of ham radio is gonna' be sold out so we can preserve the past.
I'm worried about the trend I see actually happening, right now.

>Whatever brings people into the hobby is fine.
>But is there honestly any reason why the sorts of things you are talking
>about couldn't be done with CB or GRMS or whatever ? The radio component
>seems
>to be almost incidental.

I think technical innovation is part of the intended purpose for ham radio.
Technical innovation is not permitted on CB.
Putting a TV signal on CB is illegal. What is your point here?

>Wouldn't off the shelf, type accepted black boxes work fine for what you
>need ?
>

Type-accepted black boxes assume that someone else has solved the technical
problems of making the new gadgets work. New technology, by its very nature
can't be type accepted because it hasn't been built yet. That's how
innovation works. Someone's gotta' be first. And that's what ham radio
is for. It's the place to do stuff first.

Carl,

Why don't you redirect all the energy you are using to put down code and use it to learn your code and upgrade.

I keep hearing how CW is obsolete.....yesterday a freind here in the US woked China on 40 meter CW at 8 am. Try and do that with phone. Hams have learned code for years and no problems. The real problem is "Lazyness".

Don W6IQ

I have said repeatedly that I do not feel the theory requirements should
be so stringent as to exclude non-EEs ... but the code makes no sense at
all as a requirement ... unless you want a hazing ritual or to
discourage the technical types ...

No Mike, it is an air dielectric. The center conductor is held in place by a spiral of poly but most of the dialectric constant is air. It is a very low loss high frequency cable.

Perhaps you should restrict your sarcastic retorts to the code/nocode debate. If you tread into the technical arena so no code type may just clean your clock.

No such attitude has been stated by those of us that
are in favor of ending CW testing. If anything, we have
continued to view the ITU requirement as the first
change that needs to be made.

What we also note is that the ITU treaty makes NO requirement
of a minimum speed even today. The USA culd end 13/20
wpm testing and only use 5 (or even 1) wpm testing and still be
compliant.

>Jeff KH2PZ

The Coast Guard is not DOD it is DOT and has different regs than the Department of the Army, Department of the Air Force, and Department of the Navy. I have spoken to Coast Guard stations on 20 meters before but they had amateur callsigns; Coast Guard Auxilliary stations. If you brought up 10kW transmitters on 20m Jeff, you were more than likely violating international treaty. I find that hard to believe unless you had some type of bonafide emergency operation going.

The military does have their own rules and regulations they have to abide by. They have their own frequency assignments and they have frequency managers to ensure they do not interfere with or duplicate other operations. And they do not normally fall under the auspices of the FCC. They do not have authorization to spin a dial and land where ever they might and begin operating there. It doesn't work that way. At least not in the Air Force...at least not during the 20 years I was in Air Force communications.

There ARE some amateur bands that are shared with the military that the military can use when they want. Hams are normally secondary users and have to refrain from interfering with them but none of these bands are in the HF spectrum to my knowledge.

I suggest you tune around the HF spectrum some and if you can tell me
that you hear no cw outside the ham bands I will tell you that your
antenna is too low, too short or non-existant.

HMMMM lemme see. The bands you reference are not HF?? You'd know,
you're the whizzie bang electronics RF engineer with patent (singular,
not plural). But what about the HF access you have through work??? Or
do you need a secret hamshake to get to use those allocations??

You're a fraud..face it Carl.

John Wolford <jwolford@cdsnet.net> shared these priceless pearls of wisdom:

->Bill Nelson wrote:
->>
->> Carl Stevenson (carl@ais.net) wrote:
-
-> Query ...

-> let's say a ham just happens to be scanning across the band late some
->night and happens to pick up a CW transmission.
-> Now, let's say the person sending the transmission happens to be a
->ship, plane, or what-ever in dire need of help.
-> The alert ham, knowing his code jumps in to lend assistance in
->what-ever way he/she can, possibly saving the person(s) on the other end
->of the xmission.

Let's examine the fallacy of this position. Let's say the message was in Swahili, or sent by packet. Just because the ARO doesn't understand those languages is there something missing? And, just for grins, Hardy Boys fans, how many ships have been saved by some alert ham monitoring a CW signal in the last year? The last decade? Since WWII?

-> Isn't that what ham radio's all about? Helping people in emergencies
->during assorted disasters?

-> One of the MAJOR reasons amateur radio was created was to help during
->disasters, but how can they help when they can't understand what's being
->sent?

Absolutely false. The MAJOR reason the amateur service was created was for the public interest, convenience, and necessity. The REAL reason the service exists is that the government wishes to keep a pool of trained technically competent people in practice for wartime, both concepts having been somewhat modified during the last fifty years. (It seems that a war today is over before it hits the 5 o'clock news that night.)

Sorry, my friend, I don't buy either one of your hypotheses.

Subject: W7MB, GEORGE WISE SK

W7MB was an Icon in Amateur Radio. George's first love was chasing DX.
He sat on top of the Honor Roll for decades. He achieved the first
5BDXCC and 160M DXCC awards in W7 land.

He was not a serious contester but he could a always be counted on
for a Q. George did all of this from a postage stamp size lot in an older
suburban area of Pdx.

Most importantly though, George was a friend and a mentor to many of
us beginners. George, you will be missed but never forgotten!!!!!!

73 OT, de W7GG ex Ai7b

Subject: W7MB
Date: Wednesday, December 11, 1996 12:03 AM

Fellow WVDXers,

As many of you may have heard, our Charter Club Member, and #1 7-land
DXer George Wise, W7MB, became a Silent Key today. George's wisdom,
enthusiasm and love of ham radio and the Willamette Valley DX Club will be
missed, but will remain a source of strength and inspiration to us all.

A memorial service for George will be held at 2pm, Saturday, December 14
at Kern Park Christian Church
6828 SE Holgate Blvd
Portland OR

Please pass the word to the ham community.

73,
Bob W7YAQ

No, you can't you are bound by your license. The military is not bound
by the same restrictions. As we the peopel have seen fit to give them
this power in our interest I say let them use that privelege when it
is deemed necessary.
Perhaps the op was inexperienced. Perhaps the comms were best in the
freq range. perhaps the op couldn't tune the AT to any other range.

Per haps perhaps perhaps.
Perhaps we ought to show some consideration and give the op the
benefit of the doubt.
>Drivel!
Well that was a constructive, highly intelligent, adult statement.
>The military is often arrogant and will do anything that you can't
>prevent. I know, spent a fair amount of time in the military (Navy if it
>matters) and there is no end to the stupid and arrogant things they will
>do.
True, some military personel will intentionally disrupt comms, just as
some extra class operators will do.Just as some Tech class operators
will do. Just as some no class ops will do. But the majority try to
cooperate and utilize the bandwidth for all to benefit.
>At the very least, the various stations monitoring the transmission
>should have sent in letters of protest.
Or letters of statement of the situation. Protesting causes arrogance.

Letters would be fine. Perhaps the ops commander would see fit to
train her better if the situation called for it or round filled the
letters if thhe situation called for it. But at least if there were a
technical problem or training error it could have been corrected.
>Pantywaists like you who won't defend their privilege are the real
>reason
>we as a citizenry are losing various rights."Don't do anything to them
>or they might do something back" or you might offend them...
>This nation wouldn't have gotten past 1777 with that attitude.
>
I sir am not a panty waist. I defend my rights everyday. I get
disgusted with people, who abuse their privilege, and thus risk all of
ouur rights. The nation may not get past 2000 with the attitude that
your privilege is more important than someone else's rights.
How you determine that I am a panty waist by my statements eludes me.
Perhaps you could elaborate on my panty waistdom and why you feel that
way about a person you have never met.
If I felt that the military was violating my rights I'd be the first
one to respond with judcious force. In fact it is often the persons
who holler loudly withh childish words like PANTY WAIST who are the
first to volunteer for kitchen duty and let the real men fightthe war.
If you ever care to test your mettle and manhood with me I will be
glad to accomodate you sir.
Otherwise try to debate the subject at hand with a semblance of
intelligence and try using a tad bit of adult restraint.

>Stan KF0NC

Nope. REALMEN go around calling other men pantywaists. Then run like
hell when the other man stands up and takes offense.
Well at least Pee Wee never called anyone a pantywaist :)

Exactly. Why hassle the boys in blue(or green)when they are so darn
helpful and agreeable to our community. All they ask is the
occassional usage of a freq to stay in contact with a vitally
important person or mission.
Heck, I live awfully close to a major AFB and if I even thought for a
second that I was causing interference I would work day and night to
correct the problem. And quite honestly I know for a fact they would
do the same if I were receiving interference.
Problem is, folks who go around with attitude problems attacking their
ops like children make it hard for us adults to find cooperative
people outside the hobby. They just remember the idiot who told off
the USAF like he was smarter than the thousands of proffesional ops in
the military.
Anyway....

>I am NOT advocating tyranical dictatorship ... simply pointing out the
>potential negative PR value of CW in a public display station ...

>Carl - wa6vse
>carl@ais.net

Thats the idea... hide morse code from the public, like it some kind
of shameful skeleton in our closet. Then show public how neat and
cool it is to conduct communication over long distances on the HF
bands, using SSB. I just hope you don't end up being asked how to
become licensed! Will you tell John or Jane Public of the necessity
to learn and demonstrate morse code proficiency? Will you portray CW
as a relic of the past? Will you explain that it is something that
you can forget forever once the golden ticket is in hand?

-THIS IS SAD-

Go ahead... Pass your prejudices on to those uninformed people.
Go ahead... do your best to crush this fantastically fun element of a

great hobby.

I feel bad for all those youngsters out there who will never get the
chance of seeing and hearing the "magic and mystery" of CW. That is
how I got hooked on this hobby over 23 years ago (got my novice at 14.
I am now 37 with my extra)... and I hate to think that other young
boys and girls will never experience this thrill!

-NO, I AM NOT A CW FREAK-

I also love SSB... and I will admit to talking to friends on the CB
frequencies... I just love radio in general!

I think that instead of hiding CW from the public, maybe we should
point out that many enjoy it... weak signal DX'ing is fantastic on
CW... the equipment can be cheaper for the beginner... it is great
for many handicapped people... and it is relaxing... a step out of
these crazy techno-times.
And maybe they could display, and sell, a few of those neat mystery
books that preteens like that revolve around ham radio! In those
books, CW plays a big role...The excitement and mystery! The ability
to conjure up equipment out of a handful of parts, and save everyone
(only on CW!)!

Why try to hide the current state of the affairs, the truth will come
out anyway :-).

A few observations about arranging public displays to the general
poblic about amateur radio:

Usually there are a few people who find CW "cute" as a mode of
communication that once was a major mode, long before they were born
and now beeing able to try it out. This, however, is a small minority.

When demonstrating CW contacts, there should be an other ham doing
simultaneus interpretation to the general public. Not just
interpretting the CW but also translating the Q-codes, abbrevations
and country prefixes to plain language.

Even with an "interpretter" present, the public looses interest in a
few minutes, it is a good idea to keep the CW sessions short.

When using SSB, it is important to tune the receiver to the exact
frequency of the remote station, since the general public is not used
to off-beat tones or even Donald Duck speak and have very hard to
understand what is said. The bad frequency and phase response of
current SSB filters and loadspeakers does not increase the readability
either. We usually try to pre-arrange some contacts with some
compatriots living abroad, so that it easier for the public to
understand what is said.

If you only one PC on the site, it seems to be much more effective to
run a satellite tracking program on it than trying to demonstrate
packet radio (or other non-realtime mode).

Using ATV and a big monitor attracts people to your site very
effectively. If you have an HF and VHF stations at different places,
setting up an ATV link between them seems to be quite usable.

Well, ARRL Life Member, get your facts right. The membership does not vote for K1ZZ. The BOD does. Since we only get to vote for one director, its pretty hard to vote out K1ZZ. He effectively seems to have life tenure.

Term limits, anyone?

It's a HUSTLER 4BTV (maybe a 5BTV). It might work fairly well on
10-40 meters, but it's worthless on 75-80. They're about $139 new
now.

No offense Roger, but Carl is very proud of the fact that he doesn't vote in any ARRL election. There was bo specific mention of K1ZZ in my posting. Just the fact that Carl, who rather gripe repeatedly that the ARRL doesn't represent him for the past 20+ years. Which in it self amazes most as anyone with any common sense at all would have done something about long ago (quit, refused renewal, etc). But then again, we're talking about Carl..which sez it all.

And dor your information, they is a way to remove any non elected person in the ARRL...as you stated vote for a slate of divisional directors that best meets the need. Again, noting that Carl would rather cry and whine than actually do it.

BTW Roger, I didn't like you tone of typing. I suggest you cgange it or I will hire some "slezzie lawyer type" and sue your butt off!!! (HEY CARL??? DID I GET IT RIGHT???" HA HA HA Roger, just kidding. Love to pal around with my good friend Carl. This month's spoods are to intimidate someone into stop posting by threatening to sue them. Hope you weren't intimidated....

I'm thinking about buying this rig, and would appreciate any input from people who are actually using it...

I work only cw, and enjoy chasing dx when I can hear it...Is the receiver in this rig any good for weak signal reception?

I understand the DSP is in the audio circuit...what's your opinion of its performance?

Would you recommend either of the optional cw filters (I do a lot of 40 mtr and 80 mtr work with nearby carriers and noise).

I've read this months QST review, and came away still wondering...

I guess bottom line is: How do you like this rig?

Any help is appreciated. Here or E-mail as you prefer.

Thanks.

John

TBN (Trinity Broadcasting Network) is one of those holy-roller
networks. No relation to Turner, EWTN (Eternal Word Television
Network), etc. They're sort of the National Enquirer of TV.

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled
"rec.radio.amateur.misc Frequently Asked Questions".

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

73,

John D. Seney

Right. Just like those who design aircraft must also be licensed pilots?
I suppose you believe the Yaesu, Kenwood, and Icom engineers are all
licensed hams?

Anyone who desires to do research into new HF modes certainly does not
need a license to do so.

It's really quite interesting; a few months ago, there were reports of military ops occurring on 6 meters, FM in the middle of the weak-signal band during a big opening.

They were coming from a military exercise in Arkansas; a few letters to the C.O. gained a reply that basically said

"We apologize for any interference we may have caused. We were unaware of potential interference we were causing, and assure you that in the future we will do our best to not cause such interference."

LAMBDA AMATEUR RADIO CLUB ANNOUNCES NEW PUBLIC MAILING LIST --

larc@seta.fi

==========

The Lambda Amateur Radio Club (LARC) announces a public mailing list for gay/lesbian/bisexual/transgendered ham radio operators, persons interested in amateur ("ham") radio, electronics, and shortwave listening, computer enthusiasts, and alll of LARC's friends and supporters.

The mailing list is moderated and a wide variety of subjects of interest to gay people everywhere are discussed, as well as technical topics related to radio and computer operation.

TO SUBSCRIBE:
Send an E-Mail to: majordomo@seta.fi
Leave the "Subject:" line of the message blank.
Message text must be: subscribe larc your_name [call]
<your_email_address>
Here's an example:

subscribe larc Joe Smith WB6LYI <joesmith@net.net>

If you are a licensed ham, you can add your callsign after your name. Be sure to include the "<" and ">" before and after your E-Mail address as in the example. An acknowledgment will be sent to you automatically.

==========

FOR LARC MEMBERSHIP INFORMATION, visit our web site or request our electronic brochure by sending an E-Mail to:

LARC-INFO@seta.fi

Do not include any text in the message as the mail list software has not yet learned to read.

VISIT LARC's WEB SITES:
http://www.netaxs.com/people/skeptic/larc/

From: refinley@ix.netcom.com
Message-ID: <32B19530.46CB@ix.netcom.com>
Source record: 210253

Roger:
I have no quarrels with anyone, either. I may be very opinionated
at times, and I do tend to babble. But that's one of the reasons I love
ham radio so much; it's a place where all people from the lowest forms
of intelligent life(myself) can meet far superior lifeforms, and share a
COMMON ground; our love of the hobby. I have never been afraid of my
shortcomings, and belive me, I have more than my fair share when it comes
to intellect. If you were to shove my brain up a gnat's ass, it would
rattle around like a b.b. in a fifty gallon drum. But that has never
scared me off from socilising with my fellow hams, nor will it ever. so,
I humbly ask that we declare peace, and maybe, just maybe, we'll be able
to pass these frequencies on to our children, despite the events of the
present.
73's,
Dave/KB2ZYO AT: refinley@ix.netcom.com

I think that about sums up the Steve/Carl debate - it doesn't matter what is said or discussed, regardless of merits of the points made, these two continue their vile, personal vendettas to the detriment of others.

Carl's responses have been atrocious and there is no doubt that they need to be taken to task. His profane and outrageous responses have been remarkable in masking his viewpoint. But it is even more remarkable at how easily he has been able to bait others in such a manner that they are all sucked into the morass. But I, and others, have no hope whatsoever that they will reform - we will continue to subjected to the ceaseless smear campaigns, as this posting is just an example. I suppose that the only expectation that we have is to observe who can dig themselves deeper into the gutter.

Shame on all of you, because none of you haven't the guts, let alone the intellectual capacity, to continue your useless sniping via e-mail.

>when it is usable, most of it is CW-only for techs ...

80, 40, 15, and 10 meters are 'unusable much of the time' ? Jeez, Squiggie, you sure could have fooled me. Why don't you try hooking an ANTENNA (long piece of wire) to your radio once in a while. But as I said B4, keep grasping for those reasons to get on 20 meters, you never know, you might come up with a good one sooner or later ..... Doesn't matter if we put you in the CW band or the phone band, you still can't play with your SS box on the ham bands anywhere..... Wait a minute, now that I think about it, 80, 40, and 15 meters WOULD be unusable for you, you can't copy code and don't have a phone license, is that what you meant ?

From: "Mike McAmis"
Message-ID: <58rttq$9ii@dartvax.dartmouth.edu>
Source record: 210260

I'm adding a new feature to my Windows logging/packet system XMLog. If you double click on a frequency displayed in the packet window (e.g. a PacketCluster DX spot) I set the appropriate mode/frequency for the rig.

I've got it working for my Kenwood 950 but I want to add support for other radios. Can anyone give me the commands and the port setup for other radios? For example, the 950 wants the serial port set to 4800 baud, 8 data bits, 1 stop bit, even parity. Commands to set the radio to 14.350 USB would be:

FA00014350000; and
MD2;

I assume (hope) that Kenwood radios other than the 950 use these same commands.

XMLog is freeware available at http://franklin.ptgi.com

Pase 3D is the code name for Squiggie Sat. It's a spread spectrum FM satellite
that flys around Squiggies head (lower gravity field in a vacuum, you know), and

he wears 3D glasses (those paper ones) because it looks neato when the satellite
is in the part of the orbit where he can see it. Who said Squiggie ain't hi
tech ?

Response:

Wake up and smell the coffee ... virtually EVERY other service has
long-since abandoned the use of Morse code (and the remaining few are in
the process at this time ...) There's virtually NOBODY to send this
imaginary, what-if distress message ... as has been pointed out several
times, if you want hams to save lives, mandate CPR certification to
get/keep a ham license ... that will save at least 4 orders of magnitude
more lives than Morse code ever could, no matter how fanciful your
imagination ...

> Isn't that what ham radio's all about? Helping people in emergencies
>during assorted disasters?
> I don't think it's right that someone might not live through an
>ordeal just because the 'ham' didn't understand what was being sent.

>griping because you cannot have such a small part of the amateur radio
>specturm because the government is "forcing" you to learn and
>antiquated mode against your wishes.

First, there are many regulatory barriers to the use of advanced modes
like spread spectrum, better modulation techniques, error correction
coding schemes, and other things ... we need quite a few other changes
in addition to the removal of the code test ...

However, there are a lot of things going on ... there are two STAs
allowing SS testing ... it's ridiculous that the use of SS is limited to
STAs, though ... hell, I'm building comsumer products with 900MHz spread
spectrum systems in them at work ...

AMSAT continues to work at advancing amateur satellite technology ...
actually, the Little LEOs that are trying to "horn in" on 2m and 440
derive from the prototype of the AMSAT "MicroSats" ...

There's LOTS going on ...

>IMO the majority of people coming into the hobby now via the entry
>level of the no-code tech route are just memorizing the question pools
>by listening to tapes or just studying the question pools themselves.
>They aren't really learning how to apply the technology. How do we
>get them into meeting the purposes and goals that ham radio is
>*supposed* to be about?

We need to "Elmer" them and "show them the way" ... unfortunately, there
are too many "yackers and gamers" and they are perverting ham radio into
what they want it to be and what it's *supposed* to be is falling by the
wayside ... that HAS to stop, or we will lose the bands ... NO WAY will
the FCC continue to allow us to control billions of dollars worth of
spectrum if they realize that all we're doing is playing games ...

>They just want to talk on the radio. They
>could care less how it works and they depend on others to tell them or
>hold their hand to show them how their new HT or mobile rig works.

They're not acting like hams ... more CBers (some beep, some don't) ...

>They don't want to read the manual...they can't understand it.

We need to teach them ...

>can't blame them there..hehehe) Point is when you try to elmer
>someone nowadays they take it as you are trying to tell them what to
>do and they resent it. A lot of the old timers have given up on them
>because of this problem.

To most old timers, "Elmering" has meant "learn your code, so you can be
a *real* ham" ... no wonder they get pissed off ...

>Modernization of ham radio...hmmmm. You don't want it to be an
>evolutionary thing. You want to go from the amoeba to upright talking
>homosapien in one step.

NO .. it USED to be the leader ... it's fallen behind and it's time to
play catch-up ... fast and deadly serious, or we'll lose it ...

>You will only appreciate amateur radio after it's gone.

What??? I'm trying to keep it from going away ...
>
> Cheers! jim, wk1v

>instead of the homebrewers?

Unfortunately, if there were no Yaesu/Kenwood/Icom/TenTec, damned few people would become hams ... (yes, we need to convert the appliance operators to builders and tinkerers, but most will buy their first rig, and probably a lot of their gear ...)

>Given your (empty?) concern that not
>enough folks are building gear today, one would expect your worries
>to be centered upon the home builders -

There is no practical way for homebrew to be type accepted ... the testing is rigorous, requires LOTS of expensive, calibrated test equipment, a real open field testing site, screen rooms, etc. The cost of testing for a "one-off" would be prohibitive ... plus the FCC would never agree to divert the resources necessary just to process the paperwork ...

>the manufactuers could and
>would adapt to type-acceptance (and reward us with higher prices in
>return).

Hams are too freaking cheap ... they would piss and moan and refuse to buy gear at prices that would support all the additional testing, paperwork, better designs, etc. Thus the ham gear companies would go belly up, or get out of the market ... most of them do a much better business in the commercial markets anyway ...

3544. Re: HAMS tell off military op on HF

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-13 00:00:00 UTC
From: Tim Miller <wb0rxx@monte.net>
Message-ID: <32B0A3BF.12BFCBC7@monte.net>
Source record: 210305

Hello all,

Just my $.02 on the subject. I was stationed in Guantanamo Bay for 14 years, and have many stories regarding just how arrogant the military can be when dealing with amateur radio and frequency management.

During the last sunspot peak, my ham neighbor set up a six meter station. His problems began when the local Marine GDF started using 50.100 (FM) for comms. My friend would hear a ham station on 50.110, make a call, and then be clobbered by ten GDF stations asking for a comm check when they heard his SSB signal.

My friend was not a low ranking officer - In fact he was XO of a major command, and he took his complaint up the chain to Norfolk. After much frustration on his part, he managed to get them to QSY from 50.100. A week after he left, the GDF returned to 50.100!

During the second refugee operation, the JTF had literally hundreds of H/T's on many different frequencies. One busy net was on 145.550 MHz. Of course, there was a major SAREX mission running, not to mention MIR. A local ham asked if they would _please_ QSY to a new frequency. They did QSY - to 145.000! I was not too pleased, as I had a local packet net up on 145.010, but I think that I caused them more QRM then they did to me.

(BTW, I was under the impression that 144-146 was for exclusive Amateur use world wide. Believe it or not, the local military freq coordinators had never hear of such a rule. . . And no, I did not argue the point as they could have easily pull my license if they had wanted).

My all time favorite incident happened soon after I first arrived on base. KG4 licenses are issued locally under authority of the CO. A few days after filling out the paperwork, I was issued a large certificate type license. It was a "Citizens Band" license, and had "Extra Class" stamped in the upper corner. I don't know?. . . I may have been the worlds first

"Extra Class CB'er"?! :-)

Happy holidays to one and all.

73 de Tim

"testimonials" are something that people get up and give in church
meetings (or at the other end of the moral/amoral spectrum, political
events) ... what you describe is not the rule, but may occasionally
happen (IMHO) ... lots of people go to the zoo and get a kick out of
watching the monkeys, too ... their curiosity (and the entertainment
value they receive from the experience) do not mean they thing the
monkeys are brilliant, or that they want to join them or emulate them.

check out the parallel ...

(Gee George, look at the monkeys ... how cute!)
(Gee Harold, look at those geezers using Morse code ... how quaint!)

Carl,

I prefer to think of the code as the "Foreign Language Requirement
of Amateur Radio". The only semi-flaw in the analogy is that,
after satisying the foreign language requirements for most bachellors
degrees and high school diplomas, most people promptly forget the
skill, never to use it again. At least in ham radio, a large
fraction of people communicate using CW.

This "second class citizen" stigma you speak of is no different
than any number of real world situations. Some people envy
Ph.D.s, some people envy people with B.S.s. Conversely,
some people intentionally degrade others who don't measure up
to their "standards".

The beauty of ham radio is that there is
plenty of room for everyone with all varieties of skill sets.
There's room for hams who are cutting edge researchers in
communications; there's room for electronics technicians; there's room
for people who can do arithmetic but could never get the hang
of algebra very well. There's room for people who don't want to pass
the CW test. There's room for people who don't know what a z-transform

is and who therefore cannot design digital filters. There's room
for the EEs who took the VLSI route in college, and therefore couldn't

design the matching network for a 3 element vertical phased array from
scratch if their life depended on it. And there's even room for
people who can't explain (using Maxwells Equations) why AM broadcast
band reception is lousy under bridges.

I just don't think that it is useful to degrade and demean people who
don't fit into your pronouncements of the definition of Amateur Radio,
or don't measure up to *your* technical standards as a professional in
the electronics/communications industry.

The matter can be decided anyway the club wants based on the
organization structure and bylaws of that club. That is the
beauty of PRIVATE organizations. If the bylaws
allow that the president can make that decision, then
members can:
1. Quit
2. Vote in someone else when elections are held
3. Vote to change the bylaws.

Seems pretty simple and basic to me.

>
>I get so fed up of running into technocrats who know
>absolutely nothing about analog techniques, and insist in doing
>everything digitally - taking steam hammers to crack already shelled
>nuts.

Actually, I'm an RF engineer ... my specialties include power
and bandwidth efficient modulation techniques (I have patents),
including advanced SSB methods with the ability to correct both the
amplitude and phase perterbations introduced by the multipath channel
(eliminate the fading)... yes linear, over the RF channel, methods that
are most optimally implemented through the use of digital signal
processing techniques ...

>Everything has to be digital - even if the end result is inferior.

NO, that's not what I said ... and LOTS of things that cannot be done in
the analog world are trivial in DSP ...

>I was trying to get accross that there is a "magic" to ionospheric long
>range contacts, which is equivalent to, but not the same as making the
>same contact with an FM HT through a phase 3D satellite.

I didn't say anything about using "and FM HT through a pase 3D
satellite" ... analog FM is NOT an efficient use of bandwidth or power
... especially in the case of power-limited channels like satellite
systems ...

You say you've seen too many people scared off from ham radio by:

> * techno babble which scares them off.
> * the "learn-CW-or-we-will-kill-you" brigade.
> * mindless gibbering on repeaters (you decide if its hams or jammers
>....)
> * old farts (TM)

I agree with all of these ... with the stipulation that "techno babble"
refers to the idiots who don't know what they're talking about and
simply confuse and frighten people because they don't know the theory
themselves, so they haven't a clue how to explain it to some newbie ...

>Leave room for *EVERYONE* in amateur radio - you are welcome to your way
>of doing things - but don't try to convince the world that yours is
>the only true path.

If "everyone" is technically qualified (not an EE, just reasonable knowledge of what radio is and how it works is OK for an entry point, no problem ... that's what I've been telling the "lean code or go to hell crowd for 20+ years ...

>and don't insist that I should have to give up my CW/AM/SSB/FM, or
>accept interference just so that you can find the bandwidth to play
>with spread spectrum.

You would never know that some of the things I've been talking about were there ... I'd bet you couldn't find them if you tried ... let alone have a legitimate bitch about "being interfered with" ... some idiot wrote the ARRL to protest the idea of spread spectrum in the ham bands (and the idiots in Oldington published it like it was accurate fact), saying "When the ham across the street fires up his SS rig, the entire band will be 'off-limits' to you ..." that's absurd, and the ARRL was irresponsible in printing it ...

Carl you our so full of Shit it isnt Funny. Why dont you just come clean and tell the truth about wanting on HF without CW, we all know you have no more interest in new Technology Design then I do. All you really want to do is Pickup Mic and start working DX. And Carl these Crazy Post of yours our not going to get you on HF any Faster, try learning CW or Bring your Points up to the FCC maybe they can help, or Better yet if you have all these New Techno things that you want to unleash on us. Maybe the FCC will grant you some Special HF Frequencies for your Testing purposes, good luck all above Points.

Great! The only downside is that you can only install 1 filter...CW or SSB,
not both. The mounting bracket ($25) is not a speed bracket, rather a
conventional "U" bracket and hex nuts. The universal brackets at Radio Shack
for $6 is almost as good and perhaps a little more versatile.

As far as the rig's performance...I love it. I traded off a Drake C line,
Icom R71 receiver and a Yaesu FT620 six meter rig for the one I have.

I think the price of the radio will come down. Presently, it is $1575
at HRO. The Kenwood TS-870 dropped in price from $2600 when it was
released, to $2200 present. Kenwood says that the TS-570D is replacing
the TS-450. The Ts-570D should be about the same price $1350. Expect
to see the price drop at least $150.

Not quite, but close. They have to be able to solve simple
"weight and balance" problems. Most of the rest is simple
memorization of material. There are study guide that provide
question "pools" that are very close to the actual questions
used on the tests.

The hardest part is getting the several thousand hours of flight time
in as PIC. That is expensive.

Your buddy Steve is going to be annoyed with you for that comment. After all that was his main objection to Carl's posting for months. In fact I seem to recall you joining the feeding frenzy careful of those feet of clay in all that humidity. To be technically precise is was a gramatical correction and I failed to state that explicity but not being a Code Robot I have to learn to live with my imperfections.

Mayhap you really didn't like the term "Code Robot". I rather like it myself. BTW squid manure is found lower than whale manure. Manure is six letter word that replaces your less elegant four letter one. Now that I have saved you a trip to the dictionary you may thank me.

Curtis Wheeler (cwheeler@ricochet.net) wrote:

: I have grown so tired of the "you have to WORK for it" and "you should
: earn it" arguments. As if the purpose of morse code testing is to
: evaluate the applicant's character. No - it's to evalulate (somewhat)
: the applicant's ability to communicate with morse code. With that, the
: simple question is: Is it necessary, in 1996, to require applicant to
: demonstrate the ability to use morse code in order to be granted an
: amateur license with HF privleges?

Given the way rigs are these days, the question could be extended to:
"Further, is it necessary, in 1996, to require the applicant to demonstrate
any knowledge of electronics in order to be granted an Amateur license with
HF privileges?".

I submit that the answer, in both cases, is NO. It used to be that the
average amateur built much of his equipment. These days, it seems that most
just know how to operate a checkbook or credit card. In most cases, the
commercial gear is far better than anything a Ham could design and build.

So, if there is no need for code, then there is no need for theory either.
That leaves rules/regulations, and possibly a test in operating an average
Amateur transceiver.

... deleted ...

: If morse code wasn't a unique skill would you still require it? What if
: morse code was required to graduate from high school just like math,
: science, language, etc.? If that were the case, most people would pass
: an average morse code test without much "work". Would we have to come
: up with some other kind of flaming hoop for people to jump through?

See above.

: Had the Conditional Class license come into being yet? If I recall,
: it was basically a general class license reserved for those who
: couldn't make it to the FCC field office to take the exam (either
: through handicap or living in the middle of nowhere).

In the 1940s, and before, there was only one class of license. The frequencies were, 1.75-2.05 MHz, 3.5-4.0 MHz, 7.0-7.3 MHz, 14.0-14.4 MHz, 28.0-30.0 MHz, 56-60 MHz, 112-116 MHz, 224-230 MHz and all above 300 MHz.

Note that there was no 15 meters, that there was not 27-28 MHz allocation, that there was a 5 meter band (instead of 6 meters) and 2.5 meters (instead of 2 meters) - the 2xx Mhz band is only moved a bit. Of course, most of the space above 300 MHz has been taken away.

For such a small group of users, I think the Amateur's have faired rather well over better than half a century.

: safety-related maintenance ...)

Bah! The "technical tests" are a joke. You do not need to understand a bit of theory to pass the Extra written test - just a good memory. If the theory is important, then make the bloody tests make sure the person actually understands those theories.

: >Just have test on how to operate your rig, and a few no brainer questions.

: More that "no brainer" questions are necessary to demonstrate adequate
: knowledge of the theory to meet the government's obligations and
: interests.

See above.

I suspect that, if you check the advertising space costs, you would find
that the trade journal space is orders of magnitude more expensive than
the equivalent space in QST and CQ.

>Merry X-mas

Do you even know what a sam mission is? SAM stands for Surface to Air
Missle. If it was important enough then they would have used their
assigned freqs. National security would not be in the open. It would
have been encrypted. If the plane was in distress then it should have
been on the guard freq not the ham bands. Bet ya didn't know there was
a bunch of freqs set aside for airplanes in emergencies and they don't
reside in the ham bands. Don't think that it could have started a war
or killed anyone or jammed seriously needed comms for flight. Do you
even know how many different radios a military plane has? Guess you
don't. The one I used to fly in had 5 different voice radios and that
is not including the transponder and radar altimeter. When you learn
about how the military operates then you can make assumptions. Until
you do keep your mouth shut.

Fair comment Scott. I apologize for my fellow Canadian hams who venture
below 7050 KHz.. There is no need to do so. If I heard a VE below 7050 on
phone, I'd likely say something to him. The 40m CW band is a precious
resource.
I operate on 40 above 7150KHz about half of the time.

->I suspect that, if you check the advertising space costs, you would find
->that the trade journal space is orders of magnitude more expensive than
->the equivalent space in QST and CQ.

Having bought advertising in most media for the past 25 years, I can tell you that this just isn't so. The space $ per-reader (i.e. the number of readers per ad $) is roughly the same no matter where you go. The absolute $ for these two mags is very comparable to others of the same size and market.

>average amateur built much of his equipment. These days, it seems that most
>just know how to operate a checkbook or credit card.

While the last sentence above is, unfortunately, true, it does NOT
justify dropping the theory tests ... that's like saying "People aren't
driving safely anyway, so let's just revoke all the higway safety rules
and let chaos rule."

Ham radio is *supposed* to be the *technical* "personal radio service"
.. CB, GMRS, and the Family radio service exist for those with no
interest in radio technology or experimentation and simply want to
"yack." Unfortunately, over the past few decades, the ARS has sort of
been taken over by the "gamers" and "yackers". This is a VERY dangerous
trend and does not bode well for the survival of the ARS because it
flies in the face of what the ARS is FOR in the minds of the regulators
who allocate the frequencies.

>In most cases, the
>commercial gear is far better than anything a Ham could design and build.

That's ridiculous, assuming the ham is competent technically and takes a
bit of time and effort in doing a good construction job. "Prettier"
maybe, in some's minds's eye, but "better" no way! It does NOT take a
fortune in equipment ... even surface-mount is within the reach of the
home builder ... he just doesn't have a robotic "pick&place" to shoot
the chips on the board at high volume rates ...

Commerical gear is, for the most part, not built for performance, its
built to a "price point" that the manufacturer thinks he can sell it
for. And the tooling costs for those fancy front pannel bezels, cases,
and custom-cast heatsinks are ENORMOUS!

Hams don't get the same economy of scale in parts prices when they buy
onesy-twoseys, but they don't have the tooling costs, overhead, assemby
labor costs, engineering talent costs, etc. so they can, if they know
what they are doing, build top-performing equipment at affordable
prices.

I would submit that the problem is lack of education (including
self-education) and the proliferation of the false idea that "building
is too hard and impractical" ... that and some basic laziness ... it's
easier to go out and buy a rice box than it is to roll your own, but you
don't learn the things you're supposed to be learning by simply whipping
out your plastic.

>So, if there is no need for code, then there is no need for theory either.

BZZZZZZTTTTTT ... WRONG ANSWER! The RADIO is what ham RADIO is about ...
and the THEORY *IS* the "RADIO" ... not the "CQ/FB OM/RST599/73 ...

Hi Dan, I don't think you're living in the real world. Ham radio is not a necessity. It is actually a luxury and a person would have to be mentally ill to starve himself in order to have a ham radio. Ham radios follow behind the necessities of life. If someone has to choose between buying food and buying the parts for a CW transceiver, food will always come first. Of course, there are third-world hams who are relatively poor compared to us. But I'll bet they are not poor compared to other citizens of their own country. Ham radio is one of their riches. Would you please post the call of a single third-world ham who is starving rather than giving up his ham radio?

I agree 100% with the preceeding paragraph ... if you care to check DejaNews, you'll find I've said the same thing over and over again.

The pro-coders keep throwing up the ridiculous "if the code test goes, then so can the theory test" red herring in one breath, then in the next breath, they say "the tests are *already* too easy ... to which I say I agree ...

I would favor restructuring the tests to make them meaningful (not necessarily "harder" to someone *who knows the material* ... just make sure the material is current and relevant, don't publish the Q&As, and computer generate the tests with lots of random variables and eliminate most of the "multiple guess" questions ... anyone who truly knows what they *should* know will have NO trouble passing the test ... anyone else is not qualified and needs to "crack the books" a bit ...

Jim,

Thanks for your observations ... what you state is exactly what I recalled and what I suspected would still be the case.

This implies that Oldington is doing some fairly serious "double-dipping" or "burning the candle at both ends" when it comes to advertiser revenue and subscription revenue ...

When I, as a "member" can write to all of the directors and vice directors and get a total of 5 responses (two of the people I have known personally for many years) ... that tells me that it's a "take their money and ignore them" operation and the concept of "membership" is a farce ... let's face it, the ARRL has lots of "subscribers to QST" and not much more.

QST is NOT worth $30+ /year ... so we're getting totally ripped off on "membership".

>So THAT's you problem, Squiggie. A crappy wetware modem. I thought so.

Jim,

The point is tha ANY wetware modem is, by definition, crappy ...
compared to a decent hardware/software implementation, that is.

It's simply fact that we can devise modulation methods and modems
therefore that run rings around CW and can provide reliable
communications in conditions where CW signals cannot even begin to be
heard at all, let alone copied by ear.

That you choose to continue to ignore these facts does not these facts
change or invalidate.

Carl, not everyone is like you or the folks (HI Burt!) you
>know, many of us work for chump change compared to you.

Maybe if you learned something about modern technology you could get a
decent job, rather than "working for chump change" as *you* put it.
Having learned something of use in today's increasingly technical world,
you *might* even cease to be such a chump.

>You babble upon how the no-code licensees are looked upon as second
>class hams but you look down on everyone who is not as technically
>skilled as you.

No ... I don't expect everyone to be a preofessional with 25+years of
experience designing state-of-the-art military and commercial RF gear.
I have said that those with *no* interest in radio (other than as a
device to "yack and play games on") are not real hams and belong in one
of the non-technical personal communications services (like CB or GMRS).

Carl there is room in the ARS for all kinds of people,
>many of which are not professional EEs. Its a mix, some contest, some
>DX, some experiment, some just want to chew the rag and some wll drop
>their lives for 6/8 weeks to provide their skills for humanity in
>times of need. If ham radio became the domain of just one of those
>groups, how boring would it be? You wouldn't know, you just admitted
>you, with a big toy box, cannot do what you claim all hams should be
>able to do.

I guess I don't get what you're saying in the last sentence above ...

>Steve cancels your vote, the guamese guy cancels Grandpa Lenny's
>vote. Myself? I'll be an extra by WARC-99. No vanity call and no way
>I want my novice call (it ended in KN which sucks on CW), it's for
>personal satisfaction. I'll put forth the effort and do it, not wait
>until I get it all without working for it! No-code HF yes, all HF
>no-code, I vote no, its three to two.

Fortunately for the future of ham radio, you are not the deciding vote
.. that will lie with the FCC ... I hope they have the wisdom to do
what's right for the future of ham radio, rather than what may be
popular with a large group of backward, stagnant incumbents ...
they're *supposed* to ... we'll see if they actually do ...

Hi,
You can now design your microstrip lines right on the web.
I have written a web page utilizing Microsoft VisualBasic Script
Language. You must use MS Internet Explorer 3.01 for it to work.
press to "Mstrip Calc" button at the bottom of the page and you will be
prompt for the Dielectric Constants, width and height of the
material,and the Impedance will be given.
Let me know what you think.
Thanks,
Max

What is Carl's handicap? Carl is not CW-impaired, he has posted that
at one time he could copy 20 wpm. With that handicap he should be an
extra not a tech plus when you include all his technical knowledge.
Carl presents himself as flame bait and does a very good job of it.

Carl doesn't want to work HF as it is today. Carl wants to lead the
way with spread spectrum testing on HF. He doesn't need the stupid
rules and regulations concerning modeling work and simulations being
run before actual testing is implemented. Is that what high-tech
engineering is?

Grandpa Lenny caught one, back during The Big War. It carterized his hemoroids, but scientists were able to determine the electrical value of the ball lightning by plugging him into a wall socket and measuring how much current it took to make his hair stand up the same distance as it did after he caught the ball lightning.

Me too. But I don't think Squiggie is going to tell us. If he did, he'd have to kill us. So we will have to figure it out ourselves. Let's make a list.

== The List of What Carl (aka Squiggie) Has Done For Ham Radio ==

1. He has never passed a code test and upgraded. That has made HF a better place because of his absence.

2. He has groaned and moaned and whined so much about Morse code, and insulted so many other aspects of ham radio (DXing, contesting, rag chewing, the ARRL, etc.) , that he has probably turned numerous people against no code licensing merely because of his wonderful attitude.

3. He has given Grandpa Lenny HOPE. And if Grandpa Lenny stays here on internet and keeps up the HOPE, then we don't have to worry about ever seeing him on the ham bands either.

Please feel free to add to the list.

I must have missed the list, Squiggie. Did you post that elsewhere ?
I can't seem to find any Boxes By Squiggie in my AES catalog......
Don't tell me, your middle name is AX25, right ? Anyway, thanks for
the compliment. I would much rather be a CB'er who beeps than an
EE who whines.

>So get off my case, lid ... *you* are the one who's done nothing to make
>ham radio better ... and you actually seem *proud* of it ...

Watch it Squiggie, remember, CW makes you vomit and 'LID' is a CW term.
I've done LOTS for ham radio, Squiggie. Just last nite I stayed on 160 and
followed the greyline across North America. Matter of fact, one more entry in
the log and I'll have 50,000 happy customers. I'm the perfect example of
'international goodwill' on HF. Everybody smiles when they work a new one.
But that's something I wouldn't expect you to understand. Some people never
get to experience the magic of ham radio because they are too busy trying to
fix it.

Now, now, Carl.

You've just risen to the bait. The politician who doesn't want to
step up to the issues just *loves* to first, seem not to understand
a rather obvious question. To second, continue to ignore the clarification
of said question (or to claim that his is somehow 'neither the time
nor the place to answer *those* sorts of question). Then, when the
asker becomes exasperated and resorts to sarcasm, or hyperbole, or
begins to holler, the politician informs him that he is surely not
going to conduct a discussion in *those* terms, and stalks off, feeling
victorious in a finely tailored suit of Teflon[TM].

But you really should watch those 'pot shots' and 'sarcasm.' And
immediately run to you SM, begging for a field appointment, which
will result in the opening of the Board of Directors' minds, as
if by magic. Don't you agree?

The most solid way is to do it :-)

>How would you build a cheap station? I'll take suggestions on anything:
>transceivers, power supplies, amplifiers, receivers, transmitters, antennas,
>ground system, antenna supports, station layout, homebrew, whatever.

First, get an Elmer. They can help with things that cost money.

There are 5-band HF transceivers which work fine for around $100. Things like HW-101's, SB100's and 101's, TR3 and TR4s... For a few more dollars there is a TS520, or FT101.

I'm fond of the HW8 for which I paid $20.00.

Old HT's run $100 or thereabouts. Or you can get new for $199 on sale at Radio Shack this month. Nothing wrong with the HTX-boxes. And very much right!

Wire antennas are cheap; there is a trade-off between the cost of a transmatch (need a good ground) for an end-fed wire to a tree and coax and three 10' sections of TV mast for a dipole. The latter is probably more satisfactory in most ways. In fact, I'd do the latter, and put up inverted vees for 80, 40, 30, 20, (15 shares the 40) and 10. All fed by the same RG58.

Home-brew is nice, but it winds up costing more per watt than an older transceiver. We're assuming a beginner, here, and 'air time' is really useful to a beginner.

I like the TenTec and MFJ kits a lot, though.

A few MFJ accessories (like a DSP unit and ESPECIALLY an SWR Analyzer if it is a system with a transmatch) complete the picture.

For the no-code tech, guy that 30' of mast and crown it with a J-pole, or one of those multi-J-pole arrangements. An old TV-rotor will turn a VHF/UHF beam.

There is no reason why someone shouldn't be on the air on either HF or VHF or UHF for between $200 and $500.

I've done it, several times over. Most hams actually have, whether on vacation or camping or just playing with old gear.

>amazes most as anyone with any common sense at all would have done
>something about long ago (quit, refused renewal, etc). But then again,
>we're talking about Carl..which sez it all.

Steve, once again your "facts" are false ... I voted in the recent ARRL election ... I actually picked one of the candidates on the ballot .. we'll see if he suits me after he's had a chance to do something.

What you're referring to (distorting) is the fact that I said I once wrote in "neither of the establishment lackeys is acceptable" on an ARRL ballot ... BFD ...

>And dor your information, they is a way to remove any non elected person
>in the ARRL...as you stated vote for a slate of divisional directors that
>best meets the need.

Roger's point was that any individual can only vote for ONE ARRL director ... only a nationally-organized effort to elect an entire board of directors (well, at least a majority thereof) could unseat K1ZZ ... as Roger points out, some other mechanism should be in place to allow his tenure to be passed on by the membership ...

I comment back and forth with folks, so what? Are you one of those
people who tries to sweep any controversy under the rug?

>P.S. Have you been lurking on alt.Dave.Sumner? Where do you get the
>"many of us" line?

No, on alt.Dave.Sumner.should.be.fired ... and I've talked to LOTs of
folks who think he's long overdue for replacement ... he's built a
good-ole-boy club and it's time to knock down his clubhouse and clean
things up ...

I stated my views and asked a direct question ... if a ployitican (not a
misspelling ... I meant it that way) tries to slip out of a direct
question like that, it's not teflon than imparts the slipperyness ...
it's something with a whole lot more odor, if you get my meaning.

>But you really should watch those 'pot shots' and 'sarcasm.' And
>immediately run to you SM, begging for a field appointment,

I wouldn't "beg" my SM for anything ...

>will result in the opening of the Board of Directors' minds, as
>if by magic. Don't you agree?

I don't thing the "jaws of life" could open the minds of most of the
ARRL board ... there are a couple of exceptions, but most are just too
stoddgy and dense to figure out the realities ...

Wrong ... the sorts of DSP algorithms that would be used must be tested under real propagation conditions ... channel characteristics at VHF/UHF are NOTHING like those at HF ... or do you propose that I be required to invest $50-100k or so to build a hardware/software channel simulator? I am technically capable of doing that ... I've built them before in the course of employment, but they took a LOT of time and money to build ... no way could I justify that investment to develop ham radio gear as a home project ...

>convert it to SSB. In 25 words or less.

You probably can't ... but that doesn't mean that a "technical chasm"
exists ... it might take 3-4 cheap ICs to make the SSB tx ... big deal!
Might cost a couple of dollars more ... good grief!

Why do CW TX builders have to make it sound like anything else is
"beyond anyone's capability" just because all *they* want to build (or,
is it "know how to build") is a bare-bones CW TX???

Seriously ... try building a simple phasing mode SSB TX ... you can even
build a phasing mode RX and use it for "single signal" CW reception ...

>> ... most of the prospective "Elmers" are too damned afraid

DIVISIONAL NEWS

CHANGE OF DEADLINE FOR BROADCAST COPY

The Office will be closed from 22nd December until 13th January, so if you wish to fax copy through for broadcast on 5th January or 12th January, it needs to be received in the Office by 2 pm on Friday 20th December. Usual deadlines apply to items sent via Packet to VK2WI@BCAST or Internet email to wiansw@sydney.dialix.oz.au

*** Please note there will be no VK2WI broadcast on 29th December; regular Divisional broadcasts resume on the following Sunday, 5th January ***

NEW MEMBERS

A warm welcome is extended to the following new members approved at the recent Council Meeting - we wish them a long and happy association with the Institute.

Full Members:
VK2MMM Mark RICHMOND of Kootingal
VK2ZCJ Christopher John NEWTON of Tahmoor
VK2KAY Barry John HARWOOD of Gunnedah
VK2USB William Allan McKEAN of Picnic Point
VK2DNO Phillip John MARTIN of Hilldale
VK2AWR Edward William RENOUF of Clovelly
VK2CP Jesse DE CAIRES of Penshurst

Associate Members:
Robert A. HOCKEY of Maitland
Bert YOUNG of Sanctuary Point
Jo-Hong KIM of Strathfield

Student Member:
Christopher THOMPSON of Wentworthville

-- Eric Fossey VK2EFY, Divisional Secretary

DIVISIONAL BOOKSHOP CHRISTMAS SPECIALS

On sale from now until we close for Christmas at 13.00 hours on 21st December. Call in and have a cup of coffee and a piece of Christmas cake with us, and browse through the new items in the bookshop.

The following items are at bargain prices:
Your Mobile Companion $22;
First steps in Radio $6;
Help for new Hams $15;
Antenna Compendium volume 1 $15; volume 2 $16; volume 3 $20;
volume 4 $27;
Yagi Antennas $28;
Impedance Matching $30;
The Truth About CB Antennas $20;
Low Band DX-ing $35;
Easy-up Antennas $25;

and we have three copies of the 1995 ARRL Handbook which was completely revised, and they are at the cover price of $30.

We also have some copies left of the 1997 Call book. - Hurry, they are selling fast. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

The office will re-open on Monday 13th January at 11.00 am.

--Eric Fossey VK2EFY, Divisional Secretary.

BROADCAST ROSTER 1997

ATTENTION ALL MEMBERS OF THE BROADCAST TEAM

Pixie will be setting up the roster on Tuesday this week, for the first three months of 1997. If you have any preferred dates, or dates you are not available, please can you let Pixie know by tomorrow at the latest.

WICEN NEWS

As mentioned last week, the WICEN Web page has moved to another host, generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics. The address. given at the end of this segment, remains the same, so do not use any other.

This is usually a quiet time for WICEN, and the only event of which we are aware is the Hunter region barbecue, next Saturday. However, the "silly season" can bring forth sudden activations such as storms and bushfires, so please keep your equipment ready.

Next year sees the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March; the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the December issues of the various magazines.

"Electronics Australia" laments the late Neville Williams VK2XV, who was associated with this magazine for 55 years; the Pay-TV cable network is described further; how the IPS analyses the ionosphere is discussed; the story of an Australian-born astronaut flying on a Space Shuttle mission is told; the pioneering efforts of Max Howden (then) 3BQ are further revealed; the debate on the alleged dangers from electromagnetic fields continues; a pocket-sized audio oscillator is constructed; a PC-driven arbitrary function generator is commenced; and a baby-minder will provide practice in SMT construction.

"Silicon Chip" builds an active CW filter; an electronic target pistol is constructed; and a sound lever meter could be of some interest.

"Amateur Radio" builds a hefty power supply; a Maidenhead Locator program is written in Basic; Random Radiators looks at some topics mentioned in the rec.radio.amateur.antenna newsgroup; the rules for the Ross Hull Memorial VHF/UHF Contest are published, along with the rules for the 1997 VHF-UHF Field Day; the winner of the 1996 Remembrance Day Contest is revealed; some of the more contentious messages on the packet network are noted; the basics of transmitters is continued; and operating repeaters via the Internet is described.

"Radio and Communications" introduces Slow Scan TV; the barrels of empty ball-point pens are put to new uses; the second instalment of radio-related Web sites is published; and some early history of telegraphy is told.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

SPACE NEWS

MARS GLOBAL SURVEYOR RELAY TEST A SUCCESS

The Mars Global Surveyor relay test in late November was a tremendous success (see "DXing enroute to the Red Planet," QST, Jan 1996). The MGS was launched on November 7 from Cape Canaveral, Florida. By the time the relay test arrived, the MGS was 3.1 million miles from Earth. For several hours, the spacecraft sent a steady carrier of 1.3 W at 437.1 MHz into a near-isotropic antenna. Many amateurs around the world participated in trying to detect the extremely weak signal, a lot of them successfully using the AF9Y FFTDSP program. On his Web page (http://www.webcom.com/af9y), Mike Cook, AF9Y, of Huntertown, Indiana, displays the FFTDSP spectrograms of MGS for the initial CW Mode at 1413 UTC on November 25, 1996, using two 5-foot helix antennas. He reports that his receiver was set so that 800 Hz on the FFTDSP screen corresponded to 437.09551 MHz--which was estimated to be the receive frequency at the start of CW mode. MGS actually was detected 180 Hz lower, at 980 Hz (Cook says that in CW mode, the receiver will shift the FFTDSP trace to the right as the receive signal moves down). AF9Y says the signal level dropped below detection for 45 minutes during the worst-gain period of the spacecraft's rotation.

At the station of Darrel Emerson, AA7FV, in Tucson, Arizona, the approach was to try very high frequency resolution to pull the signal out of the noise, allowing for changing Doppler shift from the heliocentric orbital motion of the Mars Relay transmitter. Using a stable reference tone injected into the receiver passband to measure--and then compensate for--receiver phase and frequency drift, a resolution of 0.013 Hz was achieved. The signal width measured from the MGS with this system was 0.0175 Hz, yielding a signal-to-noise ratio of 19 dB from a single 15-element Yagi. Emerson summarized some of his results on http://ourworld.compuserve.com/homepages/demerson/marsspec.htm. Emerson reports heavy Internet use during the test to communicate among participants and for the control station at the Stanford dish to update the spacecraft's status.

"It was quite an exhilarating, but exhausting, event for all those who took part," Emerson said in thanking those at Jet Propulsion Lab (JPL) and Stanford University "who made it all possible."

--SpaceNews, quoted in the ARRL Letter, 13th December 1996

AFFILIATED CLUBS NEWS

The next Affiliated Clubs Net will take place tonight on 3 decimal 595 Mega Hertz immediately after the call back on this Evenings VK2 Broadcast. As this is the last net before Christmas, I hope to able to wish at least one member of every Affiliated Club the greetings of the season, so how about

coming up.

--NSW Affiliated Clubs Officer, Ken Westerman VK2AGW Dunedoo.

WAVERLEY AMATEUR RADIO SOCIETY

Our regular monthly meeting is, as usual, on the third Wednesday of the month, but for December 18th we will change our normal format and instead hold only a short meeting at our clubhouse before adjourning to the adjacent Rose Bay RSL Club for a convivial end of year gathering.

The first Saturday afternoon of each month is project day, so drop in on January 4th from 1:30 onwards and get involved in some practical work or just come and see the latest changes to our clubhouse.

The Society's premises are located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club.

--Simon Buxton, VK2EII, Club President

COFFS HARBOUR AND DISTRICT AMATEUR RADIO CLUB HAMFEST

THE COFFS HARBOUR AND DISTRICT AMATEUR RADIO CLUB WILL
BE HOLDING ITS 3RD ANNUAL HAMFEST ON SUNDAY 12TH
JANUARY 1997 AT THE CHADARC CLUB HOUSE, HOGBIN DRIVE
TOORMINA STARTING AT O9OOHRS. DRINKS AND EATS
AVAILABLE. BRING YOUR PRE-LOVED ITEMS FOR US TO SELL AND
BUY!

IF YOU ARE IN THE DISTRICT WE HOPE TO SEE YOU THERE.
CONTACT US ON REPEATER 146650 FOR HELP OR INFORMATION.

--Max Francis VK2BMK, Secretary.

THE HORNSBY AND DISTRICTS AMATEUR RADIO CLUB

Well the Hornsby and Districts Amateur Radio Club Inc., for the special meeting to promote Amateur Radio, and let others know, the requirements and how to study, for an exam to obtain a licence, have hired the Main Hall at the Mt.Colah Community Centre., there will be an Amatuer Station operating on the night, also a display of some equipment that may be used, and hopefully some homebrew equipment

When? on the 28:1:97.

Where? at the
Mt.Colah Community Centre.
Piere Close.
Mt.Colah.
(Near the Eastern Entrance to Railway Station.)

The training classes for the certificate of proficiency, allowing one to obtain a licence, will start in Febuary, so make enquiries now, and start at the begining, phone Tony VK2BTL on 9487-3383, now if interested.

If you would like more Informaton regarding the Club or it's activities write to
H.A.D.A.R.C.
P.O. Box 362.
Hornsby 2077.

You may also phone, the Publicity Officer, John VK2WRT on 9807-2490.
A reminder, the Club Net each Monday night, at 8:00 P.M. All are welcome,
on the Club repeater VK2RNS, frequency is 147.250 with a positive offset.

--John VK2WRT. Publicity Officer

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL GROUPING OF ACTIVE VHF
AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE
NON-REPEATER VHF ACTIVITY AND TO HELP JUSTIFY OUR
GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.
THE VHF GROUP WILL BE HAVING CHRISTMAS DRINKS FOLLOWED
BY DINNER ON THURSDAY 19 DECEMBER. THE VENUE IS THE
PARRAMATTA RSL CLUB, STARTING AT 7:30 PM. ALL LISTENERS
ARE INVITED TO COME ALONG. SPOUSES AND GIRLFRIENDS WILL
BE PARTICULARLY WELCOME.

AUSTRALIA'S PREMIER VHF CONTEST, THE ROSS HULL MEMORIAL
VHF-UHF CONTEST, RUNS FOR ONE MONTH FROM BOXING DAY.
THE RULES WERE PUBLISHED IN THE DECEMBER ISSUE OF
"AMATEUR RADIO". THE ROSS HULL ALWAYS PRESENTS GOOD
OPPORTUNITIES TO WORK LONG HAUL DISTANCES ON THE VHF
BANDS, SO TRY TO BE ON OVER THE HOLIDAY PERIOD. THE
NATIONAL VHF FIELD DAY IS SCHEDULED FOR THE LAST
WEEKEND OF THE ROSS HULL, SO MAKE YOUR FIELD DAY PLANS
NOW.

INTENSE SPORADIC E OPENINGS HAVE ALREADY BEEN NOTED ON
SIX METRES AND WE HAVE ALREADY HAD TWO SPORADIC E
OPENINGS ON TWO MIETRES, SO THIS YEAR'S ROSS HULL
CONTEST SHOULD BE A VERY INTERESTING EVENT.

THE ARRL EME CONTEST DURING OCTOBER AND NOVEMBER WAS
HAMPERED BY POOR TO FAIR CONDITIONS ON BOTH WEEKENDS.
A TOTAL OF 16 CONTACTS WERE MADE ON 144 MHZ OUT OF
SYDNEY THIS YEAR.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144 MHZ
WHICH IN RECENT WEEKS HAS PRODUCED CONTACTS OUT TO
VICTORIA AND OUEEENSLAND, AND THE GROUP'S SUNDAY
MORNING NET ON 146.550MHZ FM STARTING AT 11:00AM
FINALLY, THE GROUP WISHES ALL VK2WI LISTENERS A MERRY
CHRISTMAS AND A HAPPY NEW YEAR.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

COMING EVENTS (15 Dec 96)

Radio Veteran's last meeting for the year.....Thursday
VHF DX Group Christmas dinner.....Thursday
Deadline for news items for VK2WI January broadcasts.....Friday
Hunter WICEN barbeque.....21st
Divisional Office closes for Christmas.....21st
Last VK2WI broadcast for 1996 & Broadcast team party at Dural..22nd
Ross Hull Memorial VHF-UHF Contest begins.....26th
No VK2WI broadcast on.....29th

JANUARY
Heard Island Dxpedition.....3rd January - 5th February
Waverley ARS Project Day.....4th
VK2WI broadcasts resume.....5th
First Gladesville ARC live test transmission for 1997.....8th
Coffs Harbour & District ARC Hamfest.....12th

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

****
Note: items faxed to the Divisional office for broadcast on the 5th or 12th of
January must be received by this Friday.
****

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is
especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing
your news item, the better the announcer will read it.

Probably the FCC issued a press release. The news editor saw the press release
and possibly assigned a reporter or just copied the release mostly verbatim.

The moral to the story: When you see positive news, be sure to publicize it.
Write press releases and send them to your media outlets. Talk to your local
news editor. They are hungry for news.

>newbies off.

Actually, our current use of "narrowband" FM is quite wasteful of spectrum ... the channelization on 2m, 220, 440, and up for repeaters, simplex, and packet is an awful waste ... we could be/should be using things that would allow 5kHz channel-channel spacing for voice ... the 5kHz channel could also support a 9600bps data stream ... wider channels could be allocated for higher data rates on the basis of aggregating 5 kHz channels ... for example, a block of 10 contiguous 5 kHz channels (50kHz) could easily support a 64kbps system.

I'm NOT talking "rocket science" here ... all of this is READLILY doable .. we just need to get past the people who don't want any progress or change ...

>Do we agree so far ?

In fact, the spreaad spectrum transmitter would have to be pretty close to your receiver to "raise the noise floor" ...

>Assuming yes ... now that is probably fine. But what about several
>thousand simultaneous transmissions ? Each raising the noise floor
>"just a bit" -- well lots of "just a bits" can add up to something
>significant. Particularly once you
>start getting some of the less technically knowlegable playing - and

>wideband 1.5Kw amp !

I would have no problem with a 100W output limit for SS systems and a requirement for automatic power control ... SS "wants" to work at the minimum power necessary to maintain the link at a sufficient BER ... ask Phil Karn ... he'll be happy to extoll the virtues of power control algorithms ... these systems won't NEED legal limit power (which is ROUTINELY abused by hams the world over, who use the "foot warmer" when 1/2 of "barefoot" power would do just fine ... who needs to be "60 over"? ... folks who run "60 over" should be fined ...

>Keeping the DX/EME/Satellite windows clean may not be so easy.

EME would be a perfect mode for SS ... (English, with a fakey Latino accent: WHAT "libration fading" ... I don't hear no stinking libration fading ...)

As for DX, as I've mentioned before, without going into any inappropriate details, I'm aware of systems that routinely transmit data VERY reliably over distances of 3000 miles or so, in the middle of the HF bands, with TX output powers on the order of 10 milliwatts ... I'd bet a week's pay that you could not identify (detect) one if you tried (unless you were privy to the spreading sequences used) ... but they're there
..

>There is an appropriate use for all of the different communication modes
>available to amateurs (including spread spectrum), the appropriate uses
>even overlap.

Agreed ...

>But as with many things, fashion pushes people into
>doing inapproriate things, and thinking in inappropriate ways.

You mean like "CW is king and better than anything else under all types of adverse conditions." and the occupied bandwidth rules that pander to the outdated "conventional wisdom" that "narrower is *always* 'better'???" or "Digital modes? I'm not interested in keyboard-keyboard QSOs ...." (the assumption that "digital" means "keyboarding" ...)

>I do agree that a bit of technical competence helps to prevent this.
>But hoping for too much in this area is just wishfull thinking.

I'm not saying that everyone has to be an EE ... but I do believe that the folks that say "Radio theory? I don't give a damn about how it

works, I just want to *use* it!" are NOT "real hams" in the sense of what the regulators had/have in mind when they wrote/read 97.1 ...

I'm looking for software to support my IC-761's CI-V port. Tried an
old program by N5MHZ but it appears to be buggy. Doesn't appear to be
anything available on the 'net but I may be looking in wrong places.
Thanks ...Scott VE1AFN .>

>with food stamps eat better and are fatter than I).
>

From this thread, I can see who REALLY uses CW. Yes, there are a few apparently well furnished third world stations on SSB. But you will find some very interesting low power stations on CW (with obvious problems of frequency drift etc. that tells you it ain't a n expensive rice box).

It simply is not true that ham radio is a hobby for the rich in these countries. I worked them from Cuba to Siberia and I know you would not want to trade paychecks with any one of them. They couldn't even follow Cecil's humanitarian suggestion to sell their handmade equipment since those who could afford to but them would buy something professionally made. Sorry but you really have to get on the CW bands to understand the CW environment, and you said you work a lot of CW Cecil...perhaps the propagation in California is a lot different than it is here in North Carolina..

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #194 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 20-Dec:
-
1. Prominent FCC Official Leaving for Private Sector Post
2. Commission Processing of Gate 2 Vanity Call Signs Continues
3. ARRL Opens Award Nominations, Due to SMs Next Month
4. League Curtails Print Publication, Mailing of "The ARRL Letter"
5. FCC Says Multiple Club Call Signs Legal, Despite Complaints
6. Weekly Propagation Forecast
7. MIR Ham Station Back on the Air after Spacewalk Antenna Repair
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. AEA Being Sold in Pieces, Sales to be Finalized in January
10. Special Event Station Calendar
11. "This Week" Seeking Special Feature Producers/Commentators
12. "The RAIN Dial-up" from Chicago
13. "Ancient Amateur Archives" with Bill Continelli, W2XOY
14. George A. Wise, W7MB, DXCC Honor Roll Member, SK
-
Funding for the program's transmission and production expense was
provided this week by a grant from the AREC Repeater Group of West
Palm Beach, Florida, where "This Week in Amateur Radio" is heard on
the KF4ATQ repeater, on 146.67 MHz, serving West Palm Beach,
Ft. Lauderdale, Lake Worth, Lighthouse Point, and Delray Beach.
Presentation of "The RAIN Dial-up" was been made possible by a grant
from Don and Karen Rice, N0BVE and N0EST, of Minnetonka, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
```

"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>foreign broadcast, CW only (for tech+) novice segments to constitute "HF
>access" ... sort of like a "light beer" doesn't quite cut it ...

I can say from personal experience that this is untrue.
When I was a novice (and rockbound to about 7 frequencies
on 40 meters and 15 meters) I worked all states and
over 80 countries CW. It wasn't easy; after all, I was
using a 50 watt Ten-Tec TX-100 crystal CW transmitter
and a Hammarlund HQ-110 receiever with a BFO to do it.

Perhaps your definition of "useless" is anything that fails to
come over your CRT with 100% copy, like internet email and usenet?

No, you lie again. The only reason you ended it, is you finally
realized you were outclassed, outmatched, and to sum it up, a Moron.

Your "credentials" were uncovered as crap, your history was pulled to
the forefront, and you did what you did best, you ran with your tail
tucked between your legs, like the yellow dog that you are.

Now, you come over to this newsgroup, to try to spread hate and
discontent here. Hopefully enough people know you now, to stop it
before you destroy this group.

3625. $$$Make Money Fast$$$

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-14 00:00:00 UTC
From: pather@hotmail.com
Message-ID: <01bbe988$00671400$50c89f88@panther>
Source record: 210149

DO YOU NEED MONEY... AND NEED IT NOW!!

THIS IS THE FASTEST... AND FAIREST... WAY I KNOW TO SHARE THE WEALTH!

Would you like to make thousands of dollars quickly, legally, and with NO CATCH?
"PRINT THIS DOCUMENT NOW"
Then keep reading... please take five minutes to read this article in its entirety... it will change your life. It has certainly changed mine! "
PRINT THIS ARTICLE NOW "

You can make up to, or over, $50,000 in only 4-6 weeks. I was browsing through these newsgroups, just like you are now, and I came across an article similar to this that said you could make thousands of dollars in only weeks with an initial investment of ONLY $5! And, like you, I thought " Yeah, right, must be a scam...". But, I was
intrigued... like most of us are...and so I kept reading. Anyway, the article said that you were to send $1.00 to each
of the 5 names and address and the article in at least 250 newsgroups... there are thousands!.. no catch...that was all you had to do.

So ofter thinking it over and talking to a few friends first, I decided to try it...ofter all, if it really was a scam all I would loose would be my $5 and the cost of 5 stamps, right...? Well, guess what... within 7 days, I started getting money in the mail...No kidding! I have to tell you, I was suprised to say the least. I still figured it would end soon and didn't give it too much thought. But then money kept coming in...tripling in numbers and multiplying by 10 nad 20 times the amount that I got the first week! In my first week I made about $20 or $30 .

But by the end of the second week, I had made a total of over $1,000!! In the third week, I had over $10,000, and it's still growing. This is my fourth week and I've made about $42,000 TOTAL...and the money is still coming in.

Let me tell you how this works and more importantly, WHY it works...also, make sure you print a copy of the article so you get the information off it and can begin making money yourself. The process is very simple and it consists of just 3 EASY STEPS:

Step 1: Get 5 separate pieces of paper and write the following statement on each sheet of paper..." PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER _____ ". Get five $1.00 bills (US)and place ONE inside each piece of paper that you just wrote on and fold the piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal mail with money in it will get yours!). Put one folded note (with

your $1.00 bill US) inside the envelope and seal it. Do the same for each of the five names. You should now have 5 envelopes sealed, EACH envelope has a piece of paper with the message asking to be put on the mailing list and a $1.00 bill (US)hidden inside the paper, RIGHT..? This is IMPORTANT.... Make sure you have written the message on each sheet of paper... by doing theis you are creating a service and keeping everything PERFECTLY LEGAL... Now, mail the 5 envelopes to eaqch of the 5 addresses listed below:

1.K. Doake, P.0. Box 54016, Tulsa, OK 74155-0016

2.J. Johnson, 6930 Oak Vally Lane, Colorado Springs, CO 80919

3.I. Chow, Suite 607-4944 Dalton Dr. NW, Calgary, Alberta, Canada T3A 2E6

4.JG. Giguere, 24-14th Street, Borden, Ontario, Canada, L0M 1C0

5.B. Leung, 363 Hidden Vale Pl., NW, Calgary, Alberta, Canada T3A 5B6

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becomming 4, 4 becomming 3 etc..) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you feel you ned to edit.

STEP 3: Post your amended article...with your name as #5... to at least 250 newsgroups (I'm told that there are close to 18,000 of them!) and all you need is 250 or so, of them.
HOW TO DO THIS -- If you have Netscape 3.0, do EXACTLY the following:
A) Click on any nwesgroup like you were going to look at it, then click on "TO NEWS" which is on the far left when you're in the newsgroup page. This will bring up a box to type a message.
B) Leave the "Newsgroups" box like it is. CHANGE the "Subject:" Box to something flashy like... NEED CASH $$$ READ HERE $$$... or... "FAST CASH!!"
C) Tab once and you should be ready to type. Now, retype (only once) this entire article ... WORD FOR WORD ... except to insert your name at #5 and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the same however!
D) When you're finished typing the entire article, click on FILE in THIS box (just above the SEND button... (NOT where it says NETSCAPE NEWS on the first box). Now click on "SAVE AS" in the dropdown menu. Save your article as a text file to you C: of A: Drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU HAVE SAVED IT! Once saved, move on to Step E below.
E) If you still have all of your text, send or post to this newsgroupnow by just clicking the "SEND" button (just below the "FILE" dropdownmenu and just above the C: button)
F) Here's where you're going to post to 250 or more, newsgroups ... OK... click on any newsgroup then click on "TO NEWS".. again, in the top left corner of your screen. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once and you're in the body of the message. Now click on the ATTACHMENT button (just below the

Subject Line). Another window will come up...click on PROCEDURE. Click ONCE on the file and then click OPEN and then OK. If Attachments Box and iet will be highlighted.
IF YOU USE ie: EXPLORER, it's just as easy ... Holding down the left mouse button, highlight this article. Then press the "CTRL" key and the "C" key at the same time to copy the article. Then print the article for your records to have the names of those you will be sending the $1.00 bills to. Next, go to the newsgroups and press "POST AND ARTICLE". A window will open... type in your headline in the SUBJECT area and then click in the large window below. Press "CTRL" and then "V" and the article will be placed in the window. If you want to edit the article , you can do so and then highlight and copy it again (so your edited article will be copied again and again to each newsgroup).
Now, everytime you post the article in a new newsgroup all you have to repeat is "CTRL" and "V" and press POST.
G) That's it! Each time you do this, all you have to do is type in a different newsgroup so you can post this message to 250 or more, DIFFERENT, newsgroups. I know, I know,... you've still got 249 to go!Don't worry, each successive article will only take about 30 SECONDS once you get the hang of it. Remember, 250 is the MINIMUM ... The more you post, the more money you will make!

That's it!... THAT'S ALL THERE IS TO IT ... JUST THREE EASY STEPS !!!
You are now in the mail order business and will start receiving your $1 envelopes from various people all over the world within days. REMEMBER... The more newsgroups you post to, the more money you will make! You may want to rent a P.0. Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "Manager" or "Investor" ... JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT, PLEASE.

Now... let me tell you WHY this system works...
Out of every 250 postings, let's say I only receive 5 replies... doesn't seem like much, does it? However, you will make $5 cash.. Not checks or money orders but CASH... with your name at #5. Each additional person who sent you $1 now also makes 250 additional postings with your name at #4... This is 1000 postings. On average then, 50 people should send you $1 with your name at #4 ... That's $50 CASH in your pocket! Now these 50 people will make 250 postings with your name at #3... that's 10,000 posting! Average return would be 500 people... that's
$500. Each of these people make 250 postings now with your name at #2 .....that's 100,000 postings ...average 5,000 return at $1 is $5000! Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $60,000 before your name drops off the list! And that's only if everyone down the line mekes only 250 postings each... REMEMBER?... The more postings you meke, the more money you make!

People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS of NEW honest users and NEW honest people who are joining the Internet and newsgroups every day and are willing to give it a try? Estimateare at 20,000 to 50,000 new users, EVERYDAY, with thousands of those joining the

actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK... I promise you. You just have to be honest. Make sure you print this article out RIGHT
NOW (if it's not done yet).

Also... try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

REMEMBER... HONESTY IS THE BEST POLICY... YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! Good luck to all and please play fairly and you will reap hugh rewards from this!
By the way, if you try to deceive people by posting the messages with your name on the list and not sending the money to the people already on the list, YOU WILL NOT GET MUCH RETURN! Someone I talked to (mean and cheap) just did that and he only made $150 after 7 to 8 weeks!! Then he sent the five $1 bills out... people added him to their lists ... and in 5 weeks, he had OVER $10,000! He than realize that there is no way to cheat with himself.

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COATING ANYTHING BUT FIVE DOLLARS AND A LITTLE OF YOUR TIME!
DO IT LIKE IT'S LAID OUT HERE... IT WILL WORK!!

T'ain't no "Norwich" county in Connecticut.
Norwich is in New London County.

Methinks that Fairfield county in Connecticut might have
the most, if not the biggest hams.

Doug

Well if you are a techno-type no-coder who will advance the technology
and lead the ARS back into the lead, ahead of the cutting edge, you
can do that. You work you're second job for free and pay for every
piece of test equipment out of your own pocket. Hams work second jobs
for free and the TAPR STA would cost a commercial concern how much for
salaries? Now you are whining about the expense of equipment? Jeez
Carl what you save on your non-salary for your second job should
surely be able to go to the R&D budget.

Perhaps all those average Latin American hams ,who can afford
riceboxes that you know, can afford that $50-$100k for hobby gear but
you can't? Carl, not everyone is like you or the folks (HI Burt!) you
know, many of us work for chump change compared to you.
> technically capable of doing that ... I've built them before in
>the course of employment, but they took a LOT of time and money to
>build ... no way could I justify that investment to develop ham radio
>gear as a home project ...
>
If Spread-spectrum and all the research it requires is that
inexpensive, count me in! I can make a living writing code out in CA
just as easily in GA. I'll learn a whole lot from you. You pay for the
hardware and we'll do 12 hrs a day Sat and Sun. Oops thats only 24 and
we have to devote 40 a week to regain the cutting edge. That means M-F

we have to cover 16 hrs each and last I checked that totaled ...._ __
hrs a week unpaid.
Please choose one:
A. 40 seconds
B. 599x
C. best regards
D. 40 .... ._, ... unpaid!!!
E. big wetware, no CW
F big hat, no cattle
G. as in guamese
H. HI HI HI HI HI HI ad burton
I. all of the above
It's kind of like a code test. Why don't you tell Len what the x means in answer B. Explain to him why a Pierce oscillator tx that can get a 599x is not subject to parasitics.
>Carl - wa6vse
>carl@ais.net
>
Yeah I'm still pandering but a favor some sort of no-code HF license. You demand it all. At least Len tries to duck and cover as he reloads with _... ... arguments.

You say no changes for the sub-bands after you say 25 kHz per band for CW. Oh you're throwing the pro-coders a bone! Does that mean you too are pandering?

You babble upon how the no-code licensees are looked upon as second class hams but you look down on everyone who is not as technically skilled as you. Carl there is room in the ARS for all kinds of people, many of which are not professional EEs. Its a mix, some contest, some DX, some experiment, some just want to chew the rag and some wll drop their lives for 6/8 weeks to provide their skills for humanity in times of need. If ham radio became the domain of just one of those groups, how boring would it be? You wouldn't know, you just admitted you, with a big toy box, cannot do what you claim all hams should be able to do.

Steve cancels your vote, the guamese guy cancels Grandpa Lenny's vote. Myself? I'll be an extra by WARC-99. No vanity call and no way I want my novice call (it ended in KN which sucks on CW), it's for personal satisfaction. I'll put forth the effort and do it, not wait until I get it all without working for it! No-code HF yes, all HF no-code, I vote no, its three to two.

How many times do you hear 73s on CW?

Scott, a friend had one and had much difficulty programming it. From what I
can remember the sequence is confusing and awkward. By the time you
read/follow the directions the thing times out. It did work well though...

Pac-Sats have been around for a while or do you mean a very expensive
land-based WAN? The guamese guy sez his Gandpa Lenny could have built
a vacuum state TNC in 1952 if there wasn't a code requirement.

Well that is called being polite. That still does not prove that the
military does not have the right to use a freq and have precedence
over amateur activity. Darn nice of the unit commander.

Once again, and I am not trying to be argumentative, but the tittle
suggest ABOVE 25MHz. Is that to say 25-1000 or so MHz? Or below 25 MHZ
as in 3.xxxMHz?
If this section deals with the world above 25MHz like in the 2m range,
then this document does not/may not regulate HF usage below 25MHz.
I'll read the document when the 2m opening is over with tomorrow
morning,

KC5WCP
with 6 new grid squares in two hours on 2m USB...do dah do dah

3633. DR-150T power adjustment MODS???

Perhaps that should be "Mr Twit, Sir!" to you. Just picture a home
brew CW station drawing attention to itself and a companion satellite
station or a TOR station or a station operating under the STA
experimenting with spread spectrum communications or maybe all.

Yeah wireless is cool, wireless is an _OUTDATED_ term. $2K for a 166
P5 with 32 M EDO RAM, 2.9 gig HDD, and 33.6 modem or $2k for a
transceiver and then get ready to spead the bucks before that
techn-guru spreads the spectrum. Jeez is "wireless" free or $19.95 a
month?
